3275. Radio Amateurs on USENET List Aug 1994 Part 2 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-28 20:58:23 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Aug28.2@ve6mgs.ampr.org>
Source record: 260846
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part2
Last-modified: $Date: 94/8/28 14 58$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. Only entries less than 12 months old are
posted here, but the ftp and email servers contain entries that are older. I
have split this list into six parts. This
Second part contains US call districts 1 and 2.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
# Note, Dave Horsfall is replacing Mark Salyzyn on August 28th 1994.
#
# Please send corrections/deletions/additions to hamlist@esi.com.au
# (Dave Horsfall VK2KFU). Many additions and updates are generated by collecting
# postings to the rec.radio.amateur.* hierarchy, so keep that in mind when
# requesting additions.
#
# Australian Amateur Radio Operators may prefer to mail their updates to Dean
# Davidson (VK2ZID) <ddavidso@metz.une.edu.au>.
#
# Comentarios, sugerencias o contribuciones en espa~ol, por favor hacerlas
# llegar a Rodrigo E. Rodriguez (CE6NUG) <rrodrigu@loa.disca.utfsm.cl>
#
# Any person interested in handling regional versions of the list are invited
# to drop me a note, I am particularily interested in representatives of
# non-english speaking regions so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

#
Last update August 24 1994
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

3276. Radio Amateurs on USENET List Aug 1994 Part 3 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-28 20:58:31 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Aug28.3@ve6mgs.ampr.org>
Source record: 260845
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part3
Last-modified: $Date: 94/8/28 14 58$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. Only entries less than 12 months old are
posted here, but the ftp and email servers contain entries that are older. I
have split this list into six parts. This
Third part contains US call districts 3 and 4.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
# Note, Dave Horsfall is replacing Mark Salyzyn on August 28th 1994.
#
# Please send corrections/deletions/additions to hamlist@esi.com.au
# (Dave Horsfall VK2KFU). Many additions and updates are generated by collecting
# postings to the rec.radio.amateur.* hierarchy, so keep that in mind when
# requesting additions.
#
# Australian Amateur Radio Operators may prefer to mail their updates to Dean
# Davidson (VK2ZID) <ddavidso@metz.une.edu.au>.
#
# Comentarios, sugerencias o contribuciones en espa~ol, por favor hacerlas
# llegar a Rodrigo E. Rodriguez (CE6NUG) <rrodrigu@loa.disca.utfsm.cl>
#
# Any person interested in handling regional versions of the list are invited
# to drop me a note, I am particularily interested in representatives of
# non-english speaking regions so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

#
Last update August 24 1994
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

3277. Radio Amateurs on USENET List Aug 1994 Part 4 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-28 20:58:40 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Aug28.4@ve6mgs.ampr.org>
Source record: 260841
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part4
Last-modified: $Date: 94/8/28 14 58$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. Only entries less than 12 months old are
posted here, but the ftp and email servers contain entries that are older. I
have split this list into six parts. This
Fourth part contains US call districts 5 and 6.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
# Note, Dave Horsfall is replacing Mark Salyzyn on August 28th 1994.
#
# Please send corrections/deletions/additions to hamlist@esi.com.au
# (Dave Horsfall VK2KFU). Many additions and updates are generated by collecting
# postings to the rec.radio.amateur.* hierarchy, so keep that in mind when
# requesting additions.
#
# Australian Amateur Radio Operators may prefer to mail their updates to Dean
# Davidson (VK2ZID) <ddavidso@metz.une.edu.au>.
#
# Comentarios, sugerencias o contribuciones en espa~ol, por favor hacerlas
# llegar a Rodrigo E. Rodriguez (CE6NUG) <rrodrigu@loa.disca.utfsm.cl>
#
# Any person interested in handling regional versions of the list are invited
# to drop me a note, I am particularily interested in representatives of
# non-english speaking regions so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

#
Last update August 24 1994
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

3278. Radio Amateurs on USENET List Aug 1994 Part 5 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-28 20:58:49 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Aug28.5@ve6mgs.ampr.org>
Source record: 260843
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part5
Last-modified: $Date: 94/8/28 14 58$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. Only entries less than 12 months old are
posted here, but the ftp and email servers contain entries that are older. I
have split this list into six parts. This
Fifth part contains US call districts 7, 8 and 9.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
# Note, Dave Horsfall is replacing Mark Salyzyn on August 28th 1994.
#
# Please send corrections/deletions/additions to hamlist@esi.com.au
# (Dave Horsfall VK2KFU). Many additions and updates are generated by collecting
# postings to the rec.radio.amateur.* hierarchy, so keep that in mind when
# requesting additions.
#
# Australian Amateur Radio Operators may prefer to mail their updates to Dean
# Davidson (VK2ZID) <ddavidso@metz.une.edu.au>.
#
# Comentarios, sugerencias o contribuciones en espa~ol, por favor hacerlas
# llegar a Rodrigo E. Rodriguez (CE6NUG) <rrodrigu@loa.disca.utfsm.cl>
#
# Any person interested in handling regional versions of the list are invited
# to drop me a note, I am particularily interested in representatives of
# non-english speaking regions so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
```

```
#
# Last update August 24 1994
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. For fidonet addresses I have
# used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
# (note address numbers in reverse order).
# Name Name of the individual.
# Call Call letters of the individual. Old and alternate calls '/' separated.
# Date Last update YY-M[-D] International format.
# A trailing * denotes not searched in call book for verification yet, @
# means not found in call book (1987, 1992 CAN or 1993 US). ? after means
# recheck may be required (eg. Call does not match name).
#
# This list has a life of it's own, so references to *my* list will be ignored.
#

3279. Radio Amateurs on USENET List Aug 1994 Part 6 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-28 20:58:58 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Aug28.6@ve6mgs.ampr.org>
Source record: 260842
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part6
Last-modified: $Date: 94/8/28 14 58$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. Only entries less than 12 months old are
posted here, but the ftp and email servers contain entries that are older. I
have split this list into six parts. This
Sixth part contains whatever is left over ... Canadian, Down under
and spots left here and there over the globe. Some Amateur Radio Related email
services are also itmeized at the bottom of the list.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
# Note, Dave Horsfall is replacing Mark Salyzyn on August 28th 1994.
#
# Please send corrections/deletions/additions to hamlist@esi.com.au
# (Dave Horsfall VK2KFU). Many additions and updates are generated by collecting
# postings to the rec.radio.amateur.* hierarchy, so keep that in mind when
# requesting additions.
#
# Australian Amateur Radio Operators may prefer to mail their updates to Dean
# Davidson (VK2ZID) <ddavidso@metz.une.edu.au>.
#
# Comentarios, sugerencias o contribuciones en espa~ol, por favor hacerlas
# llegar a Rodrigo E. Rodriguez (CE6NUG) <rrodrigu@loa.disca.utfsm.cl>
#
# Any person interested in handling regional versions of the list are invited
# to drop me a note, I am particularily interested in representatives of
# non-english speaking regions so as to increase the accessibility of the list.
#

Last update August 24 1994
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

August 29, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DX NEWS Letter, AD1C, DL3NEO, G4XTA, JA6CNL, JH3GAH, K4CEF & Southeastern Cluster Group, V73C, KF8VW and K6OZL for the following DX information.

1A0KM STATUS (From the Huntsville, LA Hamfest). At the DXCC Forum, Bill, NC1L (of the DXCC Desk) announced that the latest 1A0KM operation has been approved for DXCC credit.

4U1ITU. This past week (August 22-26th) Hannes, DL3NEO, was the operator at 4U1ITU. QSL direct to DK2ZB/Richard Roegner, Simonshofer STR 45, D-91207 LAUF, Germany.

5A, LIBYA (SLIM OF THE WEEK? WFWL!). A station signing 5AARG was active on 14242 kHz starting around 2240z for about an hour on August 26th. The operator stated his name was Ali and he was operating from Tripoli. A stateside station asked how to QSL to him and he replied he could not at this time. Ali was not just giving out 5/9 reports but would give an accurrate report and was asking the stations he worked what kind of equipment they were using. Ali indicated he was using a vertical and an ICOM radio.

7O1AA NEW QSL ROUTE AND STATUS. The INDEXA Net reported that operator Ahmed is safe in Jeddah along with the logs for 7O1AA. They also reported that the equipment was lost in the war. Those who had a chance to work 7O1AA back in April, here is a new QSL route: Ahmed Nasser, P.O. Box 7198, Jeddah 21462, Saudi Arabia.

9G, GHANA. The members of the Central Arizona DX Association will be very active in the upcoming contest season as they make plans for a DXpedition to Ghana. Their operations begin October 26th through November 4th and they plan to be an entry in the CQ World Wide SSB Contest, October 29-30th. Operators will be Vince/K5VT/9G5VT, Mike/AA7NO/9G5MB, Warren/KF7AY/9G5WH, Rod/NZ7E/9G5RM, Jack/WA7LNW/9G5JR and

Millie/WY7K/9G5MT. Their contest callsign will be 9G5TL. The group will operate from the NOVOTEL, Accra, Ghana, West Africa. This is the first major contest operation from Ghana since 1982. Operations will be observed by members of the Ghana Amateur Radio Society. Outside the contest the group will have 3 stations working 160-10 meters including WARC bands. Operation will include SSB, CW and RTTY modes. During the SSB contest the group will operate in the multi-single category. QSL 9G5TL via KG7XC, Jack Sheldon, Jr., PO Box 31898, Mesa, Arizona 85275-1898. QSL other callsigns via home calls. For more information on this DXpedition contact Rod Mack, NZ7E, at (702) 782-9758 extension 34.
A second group of members from the Central Arizona DX Association and friends from the UK (an all FOC group) will follow the SSB operation of 9G5TL to Ghana for a multi-multi or multi single operation in the CQ WW CW contest, between November 20th to November 30. The contest takes place November 26-27th and their contest callsign will be 9G5NN. The following operators will be active from the same location as the first group: Mike/KC7V/9G5MF, Tony/N7BG/9G5TR, Jim/K7GE/9G5JR, Roger/G3SXW/9G5RW, Rob/GM3YTS/9G5RF and Chris/G4FAM/9G5CH. Like the SSB group, they will be active on all bands, all CW with some RTTY. QSL 9G5NN via G3SXW. For more information on this group contact Mike Fulcher, KC7V, at (602) 585-4800 or 1-800-922-7887.
Meanwhile, John, GM0FQV, arrived recently in Ghana and will be there working on a construction project for the next couple of years. John was signing GM0FQV/9G1, but as of the past weekend he has received his 9G1JB callsign. He has been heard on 15 and 20 meters SSB recently around 2300z. QSL only to G4XTA.

HS, THAILAND. Fred, K3ZO, is again operating as HS0ZAR. This time he will be there until October 10th. Also, he will be spending a few days in Singapore where he will attend the IARU Region 3 Conference. Look for him on 20 meters CW between 1130-1600z. He states that he will give 40 meters a try (Bangkok sunset 1119z, sunrise 2307z). Fred reports that 80 meters is still a no-no in Thailand except for special expositions, expeditions and contests. So he does not expect to be able to operate 80 meters or the WARC bands. QSL to K3ZO or via the bureau.

JU1HC QSL INFO CORRECTION. Japan DX News reports a correction in the QSL information of JU1HC. QSL via JA2DDN, Hideo Kirii, 1-73-2 Amatsuka-cho Nishi-ku, Nagoya-city, 451 Japan. This operation will go QRT on August 31st.

KH0, SAIPAN ISLAND. JA6CNL (KR4VN) will be active from here as KH0/KR4VN from September 10-13th. Suggested frequencies are: CW - 7025, 10102, 14025, 18070, 21025, 24895 and 28025 kHz and SSB - 7080, 14195, 18150, 21295, 24950 and 28495 kHz. There may be a little activity on 80 meters. QSL via JA6CNL, PO. Box 11, Yahata, Kitakyushu, 805 Japan or via JARL.

PY0, FERNANDO DE NORONHA. There will be activity again from PY0ZFB between September 3-5th. QSL via JL1KSI.

SV/A, MOUNT ATHOS. Arie, 4X6UO (via N3KK), reports that a few German operators have just recently finished setting up RTTY equipment for Monk

Apollo. SV2ASP/A was active on RTTY a few weeks ago, presumably to test the equipment. Apollo (SV2ASP/A) will be very active on RTTY (which is now reportedly his favorite mode) in October, or possibly sooner. The best time to catch him is on Sundays after he has finished his work around the monastery.

V5, NAMIBIA. In October, (during the CQ WW SSB Contest) a group will be active from Namibia. Their callsign has not been made availble as of yet nor has the complete list of operators. Some of the operators that were mentioned are N0AFW, W5/AH9B and NH6UY. It was reported that Pat, NH6UY, is taking satellite gear on this trip. Also, Peter, N0AFW, will head-up this DXpedition and he may still have some spaces available for operators if you're interested.

V7, MARSHALL ISLANDS. Ken, V73C, reports that he will be assisting in a big V7X operation in the CQ WW SSB Contest (October 29 and 30th). The other operators who will be there are KH6HH, KH6M and AH6IO. QSL (direct) to KH6HH.

VK9, COCOS-KEELING ISLANDS. JA3IG will be active as VK9IG from Cocos Keeling Island from September 7-10. Operations will be on 40-10 meters CW/SSB. QSL via JA3IG.

VK9MM CARDS (ANOTHER ROUTE). Ken, V73C, and Murray, WA4DAN, who were operators of VK9MM DXpedition and were recently at the Huntsville Hamfest, stated if anyone is having trouble getting a VK9MM card, send one card and a SASE to Murray, WA4DAN. Both Murray and Ken have copies of the VK9MM logs.

WHERE IS ROMEO (3W3RR, 5A0RR, P5RS7, etc)? Romeo made a suprise visit to the Huntsville, AL Hamfest. He is reportedly a guest of Verne, W8BLA, and attended the DX dinner banquet. He offered no new information or current details on the DXCC status of his past 5A and P5 operations. However, at the DXCC Forum, Bill, NC1L (of the DXCC Desk) announced that the P5RS7 documentation has been translated from Korean into English, and is being reviewed. He also mentioned they are still waiting on documentation for the 5A0RR operation. Several people have reported that Romeo told them that he will be taking a couple of years off from DXpeditioning.

YA, AFGHANISTAN. OPDX has received QSN reports from the Southern states and East coast stations that there has been activity on 20 meters CW from a YA/RW6AC (with a weak signal). This station has not been heard since OPDX first reported it back in May and at that time there was an indication this station would only be there through the first week of June. Check around 14010 kHz between 1100 and 1230z. QSL to Box 16, Armavir, Russia.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Interesting. How *do* GE suggest that we *safely* dispose of these NiCad
batteries then? Will they pick up the tab for sending (in a safe manner) the
dead batteries back to GE for safe disposal?

You forgot the "QRU OM" bit :) I've "talked" with many a "J-call" cw operator
who says this after the standard qso (template, I believe it's called). At
least they don't beat about the bush. :)

[snip]
> Well, maybe because people do not know what to say. It is hard to sit down

Yes, I've seen this on many a JOTA weekend! That's something about kids - they
adapt quickly.

[snip]

Agreed. I know many brilliant "geeks & loners". I know some that aren't, too. These are the ones that I think are seen more often a radio club "meet the people" days, etc.

[snip]
> usually Introvert
> operators are better "goal oriented" (i. e. Net Controllers, Emergency

Yes, I'd agree with that too.

> scares the hell out of me.

CW is more of a leveller than phone.

OK, I've not had much experience of that over VHF - I think I'm about to, though. I have a very distinct Aussie accent. One thing I've discovered over here (in the UK) is that some people will not take me seriously because of it. Not all, or even the majority, but a significant minority. (Some of them, in business dealings, have discovered the fallacy of that approach - even to their detriment.) I also find it very hard to be understood by many of the general population here in the North-East. Sometimes I have to tread a very thin line between speaking clearly to be understood, and sounding like I'm annoyed at not being understood.

On the other hand, I've spoken with many operators on HF who speak english with what you call a "wierd" accent. I think that they're on up on me, because they're much more proficient at a second or third language than I am. Some are on HF phone just to improve their language skills.

What amazed me was the number of people for whom english was not their first language, but could speak passable english. (Especially those from the former Sov. bloc.) Compare that with the number of western world english-as-first-language speakers who can speak a second or third language. I think the ratio of former to latter is *very* high.

[snip]
> *sigh* It looks like I have to either joint to a club or shy away from VHF
phone> for a while and do CW, I might have better luck.
[snip]

My advice (and that's all it is - just advice) is to keep practicing conversational english (at the club, on the radio, etc. - using it is the best way to improve language skills) *and* use cw (it's more fun)!

STS-64 SAREX Update

The next Shuttle Amateur Radio Experiment (SAREX) mission is now less than two weeks away. The STS-64 Space Shuttle Discovery Mission, tentatively scheduled for launch on September 9, will carry SAREX voice and packet radio on a 9 day mission. More details on the upcoming SAREX flight are described in the detailed information sheet below.

STS-64 Shuttle Amateur Radio Experiment (SAREX)
Information Sheet

Mission:STS-64 Space Shuttle Discovery
Lidar In-Space Technology Experiment (LITE-1)
SPARTAN-201
Robot Operated Materials Processing System (ROMPS)

Launch:September 9, 1994, 20:30 UTC

Orbit:57 degree inclination

Mission Length:9 days (Nominal)

Amateur
Radio
Operators:Dick Richards, KB5SIW, Commander, Blaine Hammond, KC5HBS,
Pilot, and Jerry Linenger, KC5HBR, Mission Specialist

Modes:FM Voice
Prime callsign: KB5SIW

Packet Radio
Callsign: W5RRR-1

Frequencies:All operations in split mode. Do not transmit on
the downlink frequency.

Voice Freqs:Downlink:145.55 MHz (Worldwide)
Uplinks:144.91, 144.93, 144.95, 144.97, 144.99 MHz
(Except Europe)
144.70, 144.75, 144.80 MHz (Europe only)

Note: the crew will not favor any specific uplink
frequency, so your ability to work the crew will
be the "luck of the draw"

Packet Freqs:Downlink:145.55 MHz
Uplink:144.49 MHz

Info:Goddard Amateur Radio Club, WA3NAN, Greenbelt Maryland,
SAREX Bulletins and Shuttle Retransmissions
3860 KHz, 7185 KHz, 14,295 KHz, 21,395 KHz, 28,650 KHz
and 147.45 MHz (FM)

ARRL Amateur Radio Station, W1AW, Newington, CT
SAREX News Bulletins
3990, 7290, 14,290, 18,160, 21,390, and 28,590 KHz
and 147.555 MHz (FM)

:Also, bulletins available on internet, via AMSAT ANS,
Compuserve, and your local PBSS.

School Group Participation: 10 school groups will participate
in SAREX with pre-scheduled direct
and telebridge contacts. These include
nine in the U.S., and one in New Zealand.
Prelaunch Keplerian Elements:

These are the Keplerian elements for STS-64 mission, rotated to the
current planned launch time of Sep 9 at 20:30 UTC. The JSC-005 epoch
is at the start of orbit 5, after the trim burns on orbits 3 and 4. The
negative drag fit was required to match the design trajectory because there
is a 6.5 fps trim burn on orbit 28. The phasing and circ burns on orbit 99
lower the altitude by about 8 n.mi, so the second element set JSC-006 is
required after that. These Keps are provided by Gil Carman, WA5NOM
at the Johnson Space Center ARC.

SB SAT @ AMSAT $ANS-239.02
WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 239.02 FROM AMSAT HQ
SILVER SPRING, MD AUGUST 27, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-239.02

Weekly OSCAR Status Reports: 27-AUG-94

AO-13: Current Transponder Operating Schedule:
M QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Jul 11 - Sep 12
Mode-B : MA 0 to MA 90 | Omnis : MA 230 to MA 30
Mode-BS : MA 90 to MA 120 |
Mode-S : MA 120 to MA 122 |<- S beacon only
Mode-S : MA 122 to MA 145 |<- S transponder; B trsp. is OFF
Mode-S : MA 145 to MA 150 |<- S beacon only
Mode-BS : MA 150 to MA 180 | Blon/Blat 180/0
Mode-B : MA 180 to MA 256 | Move to attitude 230/0, Sep 12
==========
N QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Sep 12 - Dec 19
Mode-B : MA 30 to MA 150 |<- OFF Oct 22 - Nov 07 for eclipses
Mode-B : MA 150 to MA 190 | max duration 2h 12m
Mode-BS : MA 190 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF

Mode-B : MA 230 to MA 30 | Alon/Alat 230/0
Omnis : MA 250 to MA 140 | Move to attitude 180/0, Dec 19
The battery charge state is of paramount importance during the eclipse seasons. As always the command team may have to have to make temporary changes to the published schedule. In that case we will try to minimize the inconvenience, setting Mode-B OFF from MA 230-256 in the first instance.
==========
[G3RUH/DB2OS/VK5AGR]

RS-10: In last week's OSCAR Status Reports NO1R reported that he has made some very spectacular contacts with his very modest Mode-A station arrangement. His station set-up includes a Kenwood TR-751A at 25 watts into a AEA Isopole up about 35 ft. His receiver is the Realistic HTX-100 into an inverted-vee up about 30 ft with an Advanced Receiver Research 10M preamp. This week NO1R reports that he has just received a QSL from Andy Mironov at RS3A confirming my RS-10 Robot QSO in April. Andy also writes: "I will be glad to have any info abt your work via RS: your DX? PSE send by post or packet. 73 Andy" The packet address is for Andy is: RK3KPK@RK3KP.RUS.EU [NO1R]

AO-13: N7RYW would like to pass on a note about the Mode-S transponder. He has noticed that there is one station who continually sweeps the uplink, looking for his downlink signal. This is fine normally, N7RYW says, but as this station starts to increase his power far in excess of what is needed when he is unable to find himself. The net effect of this is that other stations can't hear themselves either because the AGC on the uplink receiver has reduced its sensitivity to compensate for this strong signal. This has the effect of reducing the AGC affects EVERYONES, making it impossible to even hear their own signals! N7RYW has tried to respond to this station CW CQs when it finally does settle down (over 20 minutes one day!), but it does not respond to N7RYW's SSB call. N7RYW says he doesn't have a key, and doesn't want to install one just for just one single lid! All of the Mode-S users N7RYW has talked with are well aware of the power limits for uplinking with this one exception. N7RYW will not single out this person with their callsign, so he hopes a call to him in this way, with as much information as possible, without the call, will get his attention. This problem is ongoing, and serious. A station recently was attempting their first QSO on Mode-S a few days ago, and could not get it done due to this over-powered signal wiping out the trans-ponder. This is definitely NOT radar, which does not start sending CQ CQ CQ DE *****! While it won't help the excess power problem, this item may help people "find themselves." N7RYW has found that the Mode-S transponder's actual downlink appears to be 2400.735 MHz to 2400.765 MHZ, up 30 kHz from those published. N7RYW does not own a signal source with that high of frequency to verify this, but the UO-11 beacon passed zero Doppler within 1 kHz of the published frequency, so N7RYW would like to hear if anyone else has found those frequencies to be more accurate so he can verify and notify! [N7RYW@teleport.com]

KO-23: N7RYW reports that KO-23 is now back in operation after an OBC crash. The groundstation control elected to do a data dump to try to find the

cause of the crash, so it took a few extra days to get the OBC reset. [N7RYW@teleport.com]

KO-25: KO-25 is back in service. Both KITSATs were down at various times for output power tests. These tests appear to be over for now. N7RYW has noticed that when either one is down due to a crash, a peculiar tone is emitted on the transmitter. If you are getting a good signal level, but no data, turn up the volume and listen for this tone. It may save you some head scratching later! Also, on the two KITSATs, the control station usually puts out a notice when one of the sats will not be in regular service. They are usually short notices, and originate from HL0ENJ, so it might be good to mark all messages from this station for automatic downloading in your select files. [N7RYW@teleport.com]

UO-11: The 2401.5 MHz beacon was been heard by N7RYW twice with an unmodulated carrier. On the first occassion he had the polarization set at LHCP, and it was just barely audible. Later he changed to RHCP and the signal was very strong. This polarity change was done on a 6' dish with a horn type feed with dual probes fed 90 degrees apart, much like a crossed dipole. [N7RYW@teleport.com]

AO-16: AO-16 is up and running well. [WH6I]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ N0QCU. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

3286. IPS Daily Report - 28 August 94

Hello,
As the header suggests, I'm looking around for a few published SSTV projects.
The ones I seek fall into two groups:

1) Anyone know of SSTV hardware/software projects that are based on
either Mac or PC systems. Info on Mac-based projects preferred, since I can
get to them more often than PCs, but will gladly accepts suggestions on either
systems.

2) Any published projects involving hardware exclusively meant for
conversion of fast-scan video frames into SSTV-format images?

Thanx in advance,
R. Camama

I was practicing as a VE when I worked at Radio Shack years back before
they sold ham hear ... just licensing manuals. I didn't thinka anything
of it until someone brought it to my attention. Oh, well.

L>He waited 17 years to take the test and now complains that the
>government is taking 14 weeks to give him his FREE license.

I partially agree with your sentiment. I mean, ALL of us new Amateurs
dread that wait. . .but how can we complain - considering the
amount of money expended for licensing?

It IS a drag waiting. But I would find it hard to complain. Instead,
I used the time wisely: I joined a couple of Amateur groups, joined
a couple of repeater groups, and discovered/more-tightly-defined
what I wanted out of Amateur Radio (and what I could do for it).

Hello all!

A friend of mine (IK2YFR - Stefano) is searching for a public domain
(or shareware) software that can drive his Kenwood 450, to obtain
frequency scanning and other simple features.

I heard about CT, ScanCat and Log, but these are not public domain
and in addition they are not so easy to use. Stefano needs a simple
software, in source form, to be able to modify it...

May anyone help me?

Thank you and greetings from Italy! Alex

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

[Special note: My E-mail addresses have changed, reflecting a move to
Greater Omaha Public Access Unix, which was motivated by a desire to
seek a stable site for the Elmers List for some time to come. See my
signature below for the new addresses. My old E-mail addresses, at the
University of Nebraska at Omaha, will probably work for the foreseeable
future, but are not guaranteed.]

A Brief Historical Overview:
++++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described in the list of Frequently Asked
Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as
one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or
designing TCP/IP packet networks, such experimentation has historically
spilled over into the mainstream such as was the case with Edwin
Armstrong, who developed the regenerative oscillator and FM radio, or
General Curtis LeMay (W6EZV) who was instrumental in making Single-
Sideband the communications standard for the Strategic Air Command
(1947-1992, now reorganized into a joint command called USSTRATCOM) and
eventually the U.S. Air Force. Although packet-switching techniques
originated from DARPA (Defense Advanced Research Projects Agency) and
the ARPANet, no one can deny the tremendous influence that amateurs
have had in demonstrating the viability of TCP/IP and AX.25
communications via radio links. The efforts of AMSAT (the Amateur
Satellite Corporation), including the development of many ham satellites
and the low-orbiting Microsats (communications satellites no bigger than
a breadbox that use store-and forward packet techniques), have certainly
advanced the state-of-the-art in communications, one of the defined
purposes of the Amateur Radio Service, as recognized by international
```

treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St.,

Newington, CT 06111 or via electronic mail addressed to
rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site
at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the
companion postings to this message, "Amateur Radio: Elmers Resource
Directory [A-M]" and "Amateur Radio Elmers Resource Directory [N-Z]."
Since the list is cross-posted to rec.radio.amateur.misc,
rec.radio.info, rec.answers, and news.answers on the 1st of each month,
with an expiration date 6 weeks into the future, there should always be
a copy available at most news sites. Check your newsreader
documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet,
you may retrieve the latest copy via File Transfer Protocol (FTP) from
the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the
latest copy may be obtained from the mailing-list gateway for that
newsgroup (along with many other informational articles about radio)
when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that
case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway
of rec.radio.info, or want a copy of the list right away, send E-mail
to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/a-m
send usenet/news.answers/radio/ham-radio/elmers/list/n-z

send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites, all at standard port 70:

cc1.kuleuven.ac.be
jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl

see also comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available from the following WWW site:

URL: http://www.cis.ohio-state.edu:80/hypertext/faq/usenet

under pages:

radio/ham-radio/elmers/admin
radio/ham-radio/elmers/index
radio/ham-radio/elmers/list/a-m
radio/ham-radio/elmers/list/n-z
radio/ham-radio/elmers/diff

see also comp.infosystems.www

7. Wide-Area Information Service (WAIS): The latest copy of the list should be available from the WAIS server at rtfm.mit.edu (standard port 210) in database "usenet."

see also comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

John Ackerman AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

(See also Bob Nielsen for more information about TAPR)

++

David Andrews ZL2SX

andrews@kai.ee.cit.ac.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

++

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO-Unix tcp/ip and sendmail coming soon!

ampr.org IP Coordinator for California - Los Angeles County (44.016.xxx.xxx)

Hardware, software and wetware questions answered either with correct answers or the name of someone who does know.

To contact: J. Angus PO Box 4425 Carson, CA 90749-4425 USA
Or Phone 1 (310) 324-6080 all day monday, 7 am - 10 am tuesday through friday, 7 pm - 11 pm tuesday through thursday.

Task force for rules Rewrite Citizens Radio Service
Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals in amateur radio. The first manual was the DJ-590 and subsequent manuals included the 560,580 and 600 for Alinco. My contacts in the amateur radio community have helped other amateurs to know more about products, hidden features and new product offerings. The BBS will now included the latest info on YEASU and ALINCO products. If you have a product that you wish to have evaluated for the general amateur community, please contact before sending.

If you have questions with regard to customer service at these companies, please forward to me and they will be passed to the company contacts.

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook
with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under
/mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

Join the Usenet Un-Net: 1700-1900Z Saturdays, 28.410 or 28.390 MHz

I'm willing to act as a reference for anyone wanting info on getting
tapes (especially Callsign tapes) from the Department of Commerce
National Technical Information Service (NTIS) or wanting other info on
callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large Unix site so I know a
little bit about day-to-day Unix operations and Unix installation :-)
I also have much experience with constructing email paths that will work
rather than bounce.

I also have a fair amount of experience in hardware/software interfacing
and machine control.

Scott Ehrlich, Amateur Radio Callsign: WY1Z
How to reach me: wy1z@neu.edu [Internet], wy1z@wa1phy.ma [Packet]
Boston ARC FTP archives: ftp oak.oakland.edu /pub/hamradio
Boston ARC Web page: http://www.acs.oakland.edu/barc.html

I've played around with Mac and PC hardware, as well as dabbing a
little with DOS, UNIX, MacOS, with a tad of VMS operating systems.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives
with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

All ARRL bulletins are archived on the anonymous FTP site of
oak.oakland.edu in the Boston Amateur Radio Club FTP area:
/pub/hamradio/w1aw-list/

A mirror of all files available from the ARRL info server is also
available: oak.oakland.edu:/pub/hamradio/arrl/infoserver/
Programs mentioned in QST are in
oak.oakland.edu:/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:
oak.oakland.edu:/pub/hamradio/docs/newsline/

Mike Ardai, n1ist@netcom.com, runs the following Boston ARC mailing lists:

newsline-list (Amateur Radio Newsline)
w1aw-list (ARRL Official Bulletins)
letter-list (ARRL Letter)
ky1n-list (KY1N VEC listing, Local Boston area VE sessions)

barc-list (local Boston-area stuff)
barc-races (again, local)
fieldorg-l (ARRL Field organization discussions)
ham-tech (Untamed technical discussions about the hobby)
fox-list (local Boston stuff - T-hunting)

To join any or all of the above:

Send a message to: majordomo@netcom.com
In the body of the message, type: subscribe list_you_want

The Club also has a World Wide Web Home Page. The address is:
http://www.acs.oakland.edu/barc.html

You will need lynx, www, or Mosaic to view it. Ask me for more details
about this.

I can assist anyone with most PC installation/troubleshooting
problems. I have a good deal of experience installing and configuring
OS/2, have a good grasp of Unix (not a wizard yet though :), and a
thorough familiarity with the ISA bus and the cards that go in it.

On the radio side of things, I like digital modes and experimenting with
antennas, specifically:

- PACTOR and AMTOR
- Configuring Kantronics All-Mode (KAM) TNC's for proper operation
- Over a decade of packet experience, including setting up both DOS and
OS/2 versions of KA9Q NOS
- HF wire antennas, including 160m full-wave delta loops

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

I want stories about automotive EMI problems, dealings with dealers, and, if possible, solutions. I plan to forward these to my contact at the Society of Automotive Engineers (SAE).

If anyone knows the *right* people at any particular company, I want to know. I am also pursuing (via the SAE) more official channels.

EMI/RFI Resource List and RFI Tips package available. A business
SASE with 98 cents postage is appreciated. Electronic versions
available soon. Please specify the desired documents in your
correspondence.

The FCC has released the results of a telephone interference survey
just completed.

If you would like a copy of the survey, which includes a list of
telephone models checked, send an SASE with two units of first class
postage to the Technical Information Service at ARRL HQ. Alternatively,
you may obtain an electronic copy from the info server below.

Many amateur radio informational documents (including EMI/RFI files) are
also available from the ARRL info server. Send E-mail to info@arrl.org
with the word "HELP" in the message body.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing
your way to hamdom, the cheapskate's approach, let me
know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors
and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq: 80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes)
(someone scout out a better QRG)

Standard calling signal: CWIST IMI DE <yourcall> K (if there
are no control stations calling for
you to check in), or,
CWIST DE <yourcall> K (if there is a
control station inviting checkins)
(The alternative check in for those OTs
with salt behind the ears is a simple
DE to get the control station's ears
followed by DE <yourcall> K when the
control station acknowledges.)

Note: A simple informal net style protocol will generally be
used, unless no control station assumes control for the
evening, in which case it is an open roundtable format
discussion group.

Note: The midnight local time gathering is designed to maximize
the number of checkins spread out over the world, so less
confusion and more checkins are heard. The hope is that
someone will be aboard almost anywhere and be heard at
least locally, anywhere in the world.

Definition: A CWIST is a person with an active interest in the PRACTICE
and USE of continuous wave radiotelegraphy as directly is
applicable to amateur radio. Such PRACTICE and USE may
take the form of learning about radiotelegraphy and its
history in amateur/commercial areas, its application to radio
telecommunication, the practicing of the art and craft of
radiotelegraphy, and the refining and developing of the

technology of radiotelegraphy.

++

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called "elmers@iastate.edu" we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

++

Civil Air Patrol

Co-Host - Ham Radio and More

Ham Radio and More is available for free to any AM station that is
willing to run it with national ads intact. If you want there to be a
nationwide amateur radio talk show, call your local station and ask

them to get the program. They don't have to be part of the Talk America network. They can call KFNN in Phoenix (602-241-1510) or Talk America at 508-460-0588.

myers@fc.hp.com

Antennas, Novice/Tech instruction, batteries, power supplies, RFI, equip. testing/troubleshooting, FAQs, homebrewing. Basic theory questions also welcome.

My particular interest is in antennas and transmission lines, but I'm also more than willing to answer whatever I can in general radio theory, propagation, analog and digital electronics, etc.. (I'm a display engineer in "real life", have done my share of digital design, and have taught communication electronics at the local community college. I'm also active in some display and television standards activities.)

W. David (Dave) Paperman WQ5Y

wpaperman@msmail.his.tch.tmc.edu

P.O. Box 7039
Cut 'n Shoot, TX 77303-0039
(H) +1 713 592-8636 (6pm to 9:30pm Central Time)
(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back
to the 1920's. I will be happy to assist those needing copies of
out-of-copyright information for specific makes and models of
receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all
types. Unfortunately I have not taken the time to catalog all this
information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment,
(and I have the information in my collection) I will research and copy
it for you. Cost will vary depending on the time required to find the
information and the amount of pages to be copied. I estimate 10 pages
or less at $1.00/page including US postage. I will quote on larger
manuals.

This is NOT my career or a business. Any requests must be prepaid or I will
ship COD at additional postage costs.

UUCP: . . . !rwsys!lawton!red!terry
PACKET: WB5LMJ @ WB5MJS.OK.USA.NA
Voice 405 536-8822, Ben's Place (Benjamin Franklin) BBS 536-6988 9p to 6a
PhD candidate, University of Oklahoma in Adult and Higher Education
Educational Advisor, American Radio Relay League
221 SW Crystal Hills Drive, Lawton, Oklahoma 73505

I am primarily an adult educator conducting research in self-directed
learning. I have been involved in the following activities:

- Teach licensing classes, since 1974.
- Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy
Club, Lawton Astronomy Club.
- Public speaking and publish on growth in volunteer organizations,
marketing adult and higher education and teaching amateur radio
courses.
- Research in adult learning theory, adult motivation and organizational
theory.
- Conducted a SAREX activity that involve seven communities, 21 schools
and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively
involved in its testing. I'm the author of OrbitDRV (the tracking TSR
that comes with InstantTrack) and a number of other InstantTrack
auxilliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America)
operates the Internet host AMSAT.ORG to provide for efficient
communications between people interested in the amateur satellite
program. At this time two services are provided: a message remailing
service and a mailing list service.

In the future, an archive of files will be accessible by anonymous
ftp or possibly by email. In the meantime, check the host ucsd.edu
by anonymous ftp for AMSAT-related files. Consult your local guru
for help on using anonymous ftp.

The message remailing service permits users to send each other mail
on the Internet without keeping track of each other's Internet
address. The remailing service allows each user to receive mail sent
to the address callsign@amsat.org, where callsign is that user's
amateur radio callsign, or other unique identifier. Mail sent to
that address will be routed first to the AMSAT.ORG host at UCSD in
San Diego, then remailed from AMSAT.ORG to the network address
specified by the user. In most cases, this process delays the
message by only a very few minutes.

The mailing list service groups subscribers into mailing lists to
receive certain types of messages. There are public mailing lists
available to anyone, and private mailing lists available only to
certain people (for example, AMSAT Board of Directors members or
PACSAT command stations). Currently the following public mailing
lists exist:

ANS AMSAT News Service

This mailing list carries official news releases from
the AMSAT News Service. These messages are posted in
a form suitable for direct posting to a packet radio
BBS system. Each message contains a Bulletin Identifier
(BID), which permits the message to be introduced into
the packet network at many places without resulting in
duplicate bulletins at any BBS. The primary purpose of
this mailing list is to distribute ANS bulletins for
redistribution (via the packet net or on AMSAT voice

nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive

2. Your callsign, if any

3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous ftp as:

mipg.upenn.edu:/pub/yee/rptr010.Z

As far as I am aware, all the data is freely redistributable and my intent is to make sure it stays that way. For this reason, I have applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to mipg.upenn.edu:/pub/yee/uploads or via email to yee@mipg.upenn.edu. The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

3302. How to Identify Channel Master Control wires

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-29 12:26:32 UTC
From: greed@sl0011.srl.ford.com
Message-ID: <greed.15.000C71A0@sl0011.srl.ford.com>
Source record: 260961

One of my friends disconnected the control wires from his Channel Master Controller and forgot the correct way to reconnect them. The Rotor is a small TV type mounted with cheap hardware and is rusted in place.
Even after the nuts are chiseled or drilled off the rotor the mast will not move up (which it has to be done in oder to release the rotor) because the mast is rusted to the support bearing in the top of the tower. Can I determine the correct order by taking resistance readings or by trial and error ? There are three wires so there are 9 ways the wires could be connected, would trying the different combinations harm the rotor or controller ? One of the combinations we tried would cause the rotor to turn if the beam was disconnected but it was not strong enough to turn the rotor and beam (the beam is easy to turn by hand). Would the rotor turn at all if the wires were connected wrong ? Thanks Gary WB8OFU.....

3303. C528A and accesories.

Newsgroup: rec.radio.amateur.misc

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I was wondering if there was anyone out there in netland that
knows what other-manufacturer accesories will work with a Standard C528A?
For instance, is there a model of speaker/mike from MFJ that will work
with the 528A? How about battery packs? Is there a clone battery pack
that will fix on this rig?

>
> I think that's why conversation always seems to revert to
> ham-radio. It's the only thing you know you have in common.

In my experience I found that the conversations *start* with ham radio, and occasionally some will branch out to further topics. One that comes to mind was a cw qso with a US op who was in the Marine Corp during WWII - his ship was moored in the Brisbane River (in vk4) for two days, but he wasn't allowed to disembark. That was all he ever saw of vk! Once he found out I was operating from Brisbane, the questions (& hence the conversation) came naturally. We spent ~45 mins or so all up with that qso.

> 2) It's half-duplex! This is hard to explain, but if you make some
> joke on the air, you have no idea if anyone even chuckled, or groaned.
> Telephone gives you this. Same for the "ack-grunts" that let you know
> the other person is still there and following along, and maybe agrees.
[other bits about conversational mechanics snipped]

Yes, it's a problem. In face-to-face communication there is language, tone, body posture, etc. - they all convey information. On radio, there is language, and mostly tone. One has to compensate accordingly, and be careful about how one phrases one's speech. On cw, packet, and here on the net, it's an order of magnitude worse - there's only written language.

> 3) There is too much "clubness" to local air chatter. It's just
> loaded thick with jargon and jive like QSL,
[snip]

Hence a point made in my previous post - I try not to use jargon in normal voice work on radio. However, if conditions are bad, then jargon (i.e. q codes, prosigns / prowords, etc.) are good because the other op knows what to expect. On cw, and here on the net, I make no excuses for abbreviations, etc. -sometimes I use them liberally!

> 4) There really are some folks out there that are much more interested
> in excersizing the RF spectrum than having a stimulating
> converstion. They are always testing this or that feature, or
[snip]

One aspect of ham radio that seems increasingly to go down the gurgler these days is the technical investigation aspect of the hobby. I might be exercising the rf spectrum because I'm doing propagation tests on an hf path, or trying out a new antenna design, etc., etc. It's one of the reasons I became a ham.

In my opinion, not all conversations on ham radio are exciting - to be honest, sometimes I just cannot wait to switch the radio off! (Obviously, it's time to do something else ... :-)). On the other hand, some conversations are very memorable, and hence *one* of the reasons why radio is such a worthwhile pursuit.

We have some "parkways" back home in Canberra. Then again, the guy who won the design contest for the national capital was an American - Walter Burley-Griffin.

It gets confusing sometimes: there is a road called "Parkes Way" which will get you to the "Tuggeranong Parkway".

3307. Re: PLSE INCLUDE SASE FOR DIRECT DX QSL CARDS!!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-29 13:35:42 UTC
From: nunas@solomon.technet.sg
Message-ID: <33so7e$7h2@raffles.technet.sg>
Source record: 260824

Sean E. Kutzko (tigger@prairienet.org) wrote:

: After seeing Sharon's post on no SASE's for QSL's I wanted to add
: my two cents' worth.

: I recently went on a trip to 6Y. I worked the CW WW WPX
: CW contest as 6Y7M. This was the first time the 6Y7 prefix was
: activated. While 6Y is not a rare country, I've still received
: hundreds of cards. Many cards included an SASE, and an occasional
: envelope included a $1 plus an SASE. For this I'm very
: appreciative.
: The way I handled my cards is: Those who sent me an SASE,
: or some form of return postage, got sent out right away. Those that
: didn't sat in the bin until I got around to going to the post
: office to mail them. On those that sent no postage, I put a
: simple note on the cards: "S.A.S.E. next time, okay? Tnx."

<snip, snip>

Well, if I might be allowed a small addendum to this advice, *please*
send *big* self-addressed envelopes to those of us outside of
good old America. Nice big 11.5 * 16.5 mm (about 6 3/8 * 4 1/2 inches)
is about right.

Many of us outside USA use cards much bigger than USA sized post cards.
Some are as big as Inernational sized postcards. The cards from the USA
usually have US-sized envelopes that are too small for
international-sized post cards. Hams *outside* the US almost always
send a nice big envelope that fits international post cards.

I throw out dozens of too-small envelopes every week and replace them
with an envelope here that I have to buy and hand address. This is a
waste of trees!

I QSL 100 percent, the same day I get the incoming card as long as
the envelope fits. The ones with too-small envelopes come next, but get
put off if I have something else to do, such as pay attention to my wife (I
ain't no fool you see). Finally I do those which come via the bureau,
but they may not get picked up or sent within a few months as I usually
miss the club meetings due to travel.

I *do* appreciate the thought of those who send a self addressed envelope,
but sure hate to make waste by throwing them out. I also appreciate the $1
that most of you send (or IRCs).

Thanks to all for listening. Please pass the word as not many hams are
on the Internet.

73 de Maurice, 9V1ZS, from the land of endless summer.

Law 2 says once you've radiated your signal, you'll never get it all back in the antenna again, no matter what. :-)
The law of reciprocity (whatever) is followed. Beverages are very inefficient for receiving, but they are somewhat directional and less susceptible to interference from natural and manmade noise. So although the received signal strength is reduced, the signal to noise ratio is improved, and this can make a big difference.

Joe VO1NA (a coffee would be a nice beverage about now...)

David Stockton (dstock@hpqmdla.sqf.hp.com) wrote:
: Dave Newkirk (WJ1Z) (dnewkirk@arrl.org) wrote:

: : More news coming in a subsequent *QST*, but we have discovered that the
: : lower-cost answer--and one that should provide practically the same IMD
: : reduction at amateur frequencies--is to use *Motorola MPN3700* diodes
: : instead of the HPs.

: Did IMD testing get done at the LF end ? most PIN diodes have long
: enough periods for use above 10MHz, but parts that work well down to 1
: MHz are less common.

Working on it. Using good PINs should do better than non-PINs down through
at least 80 m. I realize that the issue is more complex because IMD-causing
sigs can include the mediumwave band, where even RF-optimized PINs generally
ain't so hot. The distinction between the two diode types blurs in that
area; I hope to look into some of the tradeoffs.

: : We will also show that 1N4007 rectifier diodes, although they contain PIN
: : structures that can provide reasonably good IMD performance compared to
: : intended-for-RF-switching PINs like the 3081 and MPN3700 *in forward
: : conduction*, *aren't* a suitable low-cost answer to the 3081 and 3700
: : because they must be *reverse*-biased to exhibit similar "turned off"
: : IMD dynamic range compared to 3081s and 3700s that simply have forward bias
: : removed.

: I remember seeing someone trying to use 1N4007s in a switch-mode
: PSU. The things were evidently so slow that they must be close to their
: limit of usefulness as a 60 Hz rectifier. 1N4007s have been used in 100W
: TR switches before now, but plenty of reverse bias voltage is essential
: to get isolation in the off state and this won't be available in a
: retrofit job.

: I wonder about the switching diodes at the inputs to the main IF
: filters, there may be a further benefit to close-in IMD of signals that
: pass the first IF. I've not tried this, but I feel suspicious about
: them. Measuring the IMD of crystal filters can be fun. Mixers and amlifiers
: can now be built at home, for pocket money, that make the quartz the
: limiting factor ! LF filters like the old European 1.4 MHz ones,
: with their large lumps of quartz usually produce better results than the
: more modern HF filters.... note that some filters had input
: transformers that were very poor for intermod performance.

What I've seen so far suggests that PINs suitable for front-end use aren't
going to be of much use for switching at MF, be the application at IF, such

as in switching crystal filters, or in a front end. But that's just a researchless opinion; maybe someone makes PINs with wildly long carrier lifetimes that will be just peachy for MF use.

And how about using JFETs as switches? Some of professional boxes do.

This is a tricky business, as you know. In a narrowband IF, second-order effects don't matter much because they're way outside the passband and because filters limit the spectrum applied to the IF input; third-order becomes all-important. Both orders are important in a front end.

If time allows, I want to go after another favorite radio weakness: In-passband IMD. I hate it when I listen to a CW radio and hear beats between two or more signals in the passband, but these effects are common. Quantifying them is necessary, though, because our hearing is nonlinear and our ears create beats to a degree that varies with the individual, and with the frequencies and sound levels involved.

David Newkirk, WJ1Z
Senior Assistant Technical Editor, *QST*

Grady,
Here is a list of email addresses for ARRL HQ. You should send a note
to the circulation manager, Debra Jahnke regarding your membership records.
While writing this post, I did a quick check of our membership records to
determine what your status was, but they show only one Grady Ward, from
Monterey, CA, whose call is KN6GR. I could not determine what your callsign
was from your post (which said "k06eb") and the several guesses I made at the
call that you meant to type didn't match anything in our database either.

ARRL EMAIL ADDRESSES
File: users.txt
Updated: August 26, 1994

The following ARRL HQ staffers, Officers, Directors and Vice
Directors can be contacted directly via the Internet at the
addresses shown. A brief description of the specific duties of the
individual is included so you know who to contact.

People not listed do not have public email addresses and cannot
respond by electronic mail. Other questions and messages to other
specific HQ staff, Officers, Directors and Vice Directors should
continue to be addressed to hq@arrl.org. Messages so addressed
will be received in the "front office" here at ARRL HQ. They will
be printed and distributed to the appropriate people by inter-
office or postal mail.

You should include your postal address (the slow kind) with all
correspondence to ARRL in case we need to send you non-electronic
material in answer to your request.

Staff member, call, title address

: Who started this "Elmer" stuff, anyway? Was I just hiding under a rock
: for the last 30 years?

: 73, Terry

The term *Elmer* (as a generic name for a ham who helps other
hams get started) was coined by Rod Newkirk, W9BRD, who served as
the conductor, from 1948 to 1978, of *QST*'s "How's DX?" column.
It all began with the "How's" lead on page 91 of March 1971 *QST*.

Regards,

David Newkirk, WJ1Z
Senior Assistant Technical Editor, *QST*

Yes, if you redesign/retune all resonant circuitery to new xtal.
Since QRG is lower you will need new coils etc.

A special thankyou to each and everyone who came to
the 1994 ARRL Southwestern Division Convention held here in
San Diego, this past weekend, Aug 26-28th. From reports I
have seen, very few complaints were heard from the
approximately 2600 folks who attended. If you missed it, did
you ever miss out on a great event. There were special
events, technical sessions and forums, t hunts, hospitality
rooms. The list goes on and on. And prizes!! Boy, was there
ever prizes. There was one RADIO given away each hour. The
lucky grand prize winner is going to be playing around with
an Icom 736 HF/6m rig. In fact, the winner was:

□□□□□□□□□□□□□□□□□□□□□□□□□□
□ Norman Rolph, KE6BJH □
□ Palm Desert, Ca □
□□□□□□□□□□□□□□□□□□□□□□□□□□

Congratulations to Norman, and also to all the others who
were able to walk away with a great prize or something they
could not live without. The convention committee would like
to thank you for attending!! Make plans to attend the next
Southwestern Divion convention, to be held Labor Day weekend
in 1995, in Long Beach, Ca on board the Queen Mary. I am sure
it will be a great time!! See you there!!

And it never fails to amaze *me* how many people make nasty generalizations and unfounded criticisms of others and drop references to how much money they have to spend in the hopes of impressing everyone, and then back down in record time claiming their posting was "misunderstood" when called onto the carpet.

> ...you want Icom to hire extra people full time just so that
> when *YOU* call, you might not have to spend a few extra dollars or be
> inconvienced by having to wait a few minutes?

No, I want ICOM to take my number and call me back when they've got time to talk to me.
I'll even foot the bill.

I just want the same quality customer service out of ICOM that other companies magically manage to provide while still turning a profit.

'Bye, Jeff.

3321. Icom 281H or 2GXAT mods?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-29 16:38:47 UTC
From: hlb@ltis.loral.com
Message-ID: <hlb.778178171@galileo>
Source record: 260962

I would appreciate pointers to any mods for the Icom 281H or 2GXAT?

I've checked several ftp sites but came up empty. At the ARRL convention
there was a 281H taht was setup in the demo mode that did some fancy things
with the display but the rep wasn't sure about the key sequence so any
info on this would also be appreciated.

Thanks,
hlb@ltis.loral.com

> be a completely non-inflammatory way, what attracted you to amateur
> radio in the first place?

This may be off-topic, so I'll limit myself to only $0.03 worth.

I wanted to be a ham for the thrill and adventure. After the Loma Prienta Earthquake in October 1989, a friend, who is a ham, was telling me about all he did working with ARES/RACES in the aftermath of the earthquake. I knew that was something that I wanted to do. A secondary reason was that he and I could chat and not have to be in the same room or tied to a telephone.

As for ragchewing, I think it depends on the region. In California where I was, there wasn't too much problem with ragchewers tying up repeaters. Well, except for one instance where a mobile ham needed direction and an OF (Old Fart) ham explained for a full minute that he didn't know where his destination was located. In Florida, where I am now, it is relatively densely populated by OF hams. OF hams are easy to spot, IMHO, because they are the only ones who NEVER EVER wait for a courtesy tone and thus time out the repeater, or they talk for so long they they alone time out the repeater, or they talk at length about mullet fishing. Unfortunately, I haven't spent much time since being licenced in other parts of the country so I can only speak from my limited experience.

Dave Newkirk (WJ1Z) (dnewkirk@arrl.org) wrote:

: What I've seen so far suggests that PINs suitable for front-end use aren't
: going to be of much use for switching at MF, be the application at IF, such
: as in switching crystal filters, or in a front end. But that's just a
: researchless opinion; maybe someone makes PINs with wildly long carrier
: lifetimes that will be just peachy for MF use.

I should have said, I was thinking of 9MHz region IF filters. If the
PINs are good on HF, they ought to be suitable here too.

: And how about using JFETs as switches? Some of professional boxes do.

2N4391 30 Ohms max on resistance. Capacitance can be a limit to
max isolation. Can also be used as a high IDss grounded-gate amplifier.
gate connection to can allows heat sinking the easy way. Still like to
get below 30 Ohms, though, and with less capacitance when off. Probably
the best choice at LF, where isolation will be better for a given C.

: This is a tricky business, as you know. In a narrowband IF, second-order
: effects don't matter much because they're way outside the passband and
: because filters limit the spectrum applied to the IF input; third-order
: becomes all-important. Both orders are important in a front end.

: If time allows, I want to go after another favorite radio weakness:
: In-passband IMD. I hate it when I listen to a CW radio and hear beats
: between two or more signals in the passband, but these effects are common.
: Quantifying them is necessary, though, because our hearing is nonlinear and
: our ears create beats to a degree that varies with the individual, and with
: the frequencies and sound levels involved.

Ah, now that's a very interesting (and untrampled) area. Most of the
really keen, usually ex-naval, CW operators I know eschew narrow CW
filters and use their ears. They complain at great length about the poor
sound of most radios and point at older valved units that had very much
better in-band linearity.

The designers in Japan have learned of the importance of better front
ends, but still assume that once past their 9 MHz filter, there is no
remaining need for any care. The AGC controlled stages seem the worst
culprit. Wondered about doing a very linear IF at 1.4 MHz, where I have
a lot of really good filters, probably a long string of push-pull
grounded-gate stages with photoresistor gain control. Bought a bag of
ORP12 cells, but haven't yet got a supply of bright enough LEDs. I need
to run them at the bright=low R end of their range as their response

slows a lot at the dark=high R end. Scrounged some samples of a monster LED that will work as an outdoor torch, LEDs are being aimed at the vehicle brake and indicator light market, so there ought to be some along at reasonable prices fairly soon (is there any prize for wild optimism?)

Another one from my personal niggle pile is lousy audio amplifiers that latch short spikes into far longer pulses.

Cheers,
David GM4 ZNX

|> no charge (it's really paid for with tax money) justify rotten service?

I think the original poster doesn't understand just how understaffed the FCC is. Nor does he comprehend the fact that the paperwork load recently doubled in this area due to the the re-occurance of license renewals after a 5 year respite.

First point. The FCC staff has been cut back to the bone, and then some over the last 15 years. To illustrate the point, there were something like 11 engineers in the local field office in 1980. There are 4 now. And you have to realize just how much area these 4 guys are responsible for! They have to do all marine inspections, commercial site inspections, etc. along with other duties in Northern CA. From my way of thinking, it is a miracle they just don't get completely snowed under. Gettysburg is in the same boat. Further, they are in the midst of updating a 1960's computer system to a more modern networked workstation system. This will help, but the migration path caused some pains.

Lastly, the work load thru this section literally doubled. There are about as many renewals being processed right now as there are new licenses. they didn't HAVE renewals last year!

SO...if you would like to have your taxes hiked, then by all means, I'm sure that we can accomidate 4-5 week turnaround!

: The patch is for contacting family and friends AND summoning assistance
: when needed.
: No business calls allowed.

Actually, the law was recently changed. It now reads no business calls that are in the pecuniary interest of the ham making the call. Hence, you can now call and order a pizza unless you work for the pizza parlor. You still can't call your office for messages, talk to your secretary or your boss, or a client because that's how you earn your living. Of course, there are always local options and you should check with the control operator of the repeater you are using to see if there are any restrictions to the use of the repeater which are not covered under the FCC regulations. Remember, the repeater trustee has his license on the line too.

3330. Beefed up script files for SuperMorse?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-29 18:18:07 UTC
From: djenkins@jetson.uh.edu
Message-ID: <33t8ov$rev@masala.cc.uh.edu>
Source record: 260972

Super Morse has a facility where the user can script QSO templates for help in building copy speed.
I downloaded V4.1 of the product, and it included two different scripts. (Maybe three--I don't
remember exactly.) After drilling with SM for two or three hours, I think I'm responding more
to what I've learned about the script, rather than reading the code. SM also has the capability to utilize
user-entered cities, names, states, rigs, antenna descriptions and the like. However, it is the
format and content of the QSO script that tends get memorized, and hence detracts from the level of learning one would like to achieve.

Has anyone composed additional, *interesting* scripts? And if so, how might one go about accessing those?

Hello net.
I have a 736R (that I really like) that is having a problem.
The 6 meter side is having a heat problem.
If I turn the rig on and operate on 6 for about 10 minutes
the transmitt and recieve start droping off.
I can go back to VHF or UHF for an hour or so and the 6 side
comes back to life.
My question for you is:
Have you or one of your friends had the similiar problem and
what did they do to fix the problem?
I guess the next question is where in the Southwest (EL Paso)
area is a repair center that works on Yaesu equipment.
Thanks

pve@dg13.cec.BE (VEKINIS Peter) says:

>>And as far as contests are concerned, I sincerely wish they did
>>away with them. Whats is the point of 'working' stations just
>>to exchange a number is beyond me.

As long as you understand that many contesters and DXers sincerely wish that ragchewing could be done away with. The point of using amateur radio to chatter interminably about non-radio things for which you could equally well use a telephone is beyond them.

>>Oh well, at least contest weekends are great for avoiding the
>>radio.

This is pretty narrow-minded. Unless your VFO dial or mode switch are welded to one position, contests never have to interfere with other activities. It is rare to have a phone, cw and RTTY contest going on at the same time, so you can use a different mode, or go higher in the band, or use the WARC bands, where there are no contests.

If you insist on trying to maintain a QRP sked on 14160 to discuss your latest operation, then yes, you can expect to be over-run by louder contesters. DXers find it equally frustrating to hear a weak signal from the Far East right underneath two ragchewers with basically nothing to say to each other, but saying it anyway. If I have nothing to say, I'd rather say it for 10 seconds to an XU than for half an hour to a W5.

To each his or her own. Contesters, DXers and ragchewers are all allowed on the HF bands, and most of us think that those with different interests are wasting precious resources. I guess we are agreed on that!

I have heard and seen many negative comments regarding 'the League' portrayed as a do-nothing-for-the-ham burocracy.

I for one would like to go on record as a happy camper. I sent in a bunch of cards to the DXCC desk and WAC desk. That day I realized I neglected to enclose return postage. I waited until today to think about getting off a note with postage $$ but received a message from Bill Moore, NC1L, the Sr. DXCC Awards Tech. telling me I needed to send in further documentation as well as some money if I wanted my cards back. Fair enough.... thanks...

I sent a message to ARRL Hq via E-mail and received a prompt reply from Jeff Bauer, WA1MBK, telling me he forwarded my message to Bill. Shortly, I recd a reply from Bill and all has been resolved. It took a few EMail messages, but I am happy with the response. They would have processed my cards and not held them up for the $$. That's great!

I don't know how much bad/incomplete or otherwise idiotic mail they must deal with from us, but I'll bet it is considerable. No short tempers witnessed at that end... just professional courtesy.

Thanks, ARRL.

3336. CW usage for repeater IDs

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-29 20:03:01 UTC
From: Tom WB7ASR <tom_boza@ccm.hf.intel.com>
Message-ID: <33tfls$eub@chnews.intel.com>
Source record: 260880
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

The FCC requires all repeaters, both amateur and commerical, to ID themselfs, since they themself's are also a transmitter. Both amateur and commerical repeaters all (some use voice) use CW as a way to ID.

Now in the amateur community its nice to know CW, because you can listen and tell what repeater you are hearing when no one comes back to your CQ. Example: when traveling out of your area or when tropo is in. CW IDs also create a BIG seperation between a person's voice and the ID, so you know its the repeater's ID and not someone else on the frequency.

However for commerical repeaters, how many cops, taxi or super-shuttle drivers know CW? Who listens and copies CW IDs on commerical repeaters? As a scanner listener, I do! Other then that, I guess its the FCC.

3337. Surge

Newsgroup: rec.radio.amateur.misc

From: PRENTICE@scanva.CAnton.EDU
Message-ID: <01HGHI2B4GWI0002Y8@scanva.canton.edu>
Source record: 260976

Question ? Do you turn off/on all systems at once.

At our local college as other places I am sure. The way to turn off your computer, printer, monitor and perhaps modem and what else .. Ok a typewriter etc.. Point being people are plugging all into a " surge type of box " which for the most part is nothing more than a mov at best in our location. More to the point. All equipment is turned on/off with one switch which is located on the strip. I go back many years to the idea that we turn equipment on/off individually to prevent surges and spikes. I really do not think that it is a good idea to turn all gear on at once. Off perhaps does not hurt a thing..

Would be interested in comments on this..

>the morse until the question answering part of the test. Why limit yourself
>to pencil and paper? Why not just _tape_ the test, and then play it back
>slowly when answering the questions?

Why do you think sight reading is *slow*? I can sight read my copy as rapidly as I can typewritten copy. As you should know, most people trained to copy via typewriter have no idea what they've copied until they sight read the text. Some of the best Morse operators I know were taught this method of copy by the military. To answer the questions on the test, you are allowed to sight read your copy, however you copied.

>> If it's allowed to copy *in your head* in order to answer the exam
>> questions, and it is, then there's no reason to forbid a pencil and
>> paper aid of whatever form for the same purpose.
>
>Well, I'm trying to show you that, IMHO, there _is_ a reason to do just
>that. The difference is that few, if any, copy code in their head by memorizing
>the entire 5 minute exam *in dots and dashes* and then proceed to leisurely
>decode it during the question period, but there are *plenty* of ways to do this
>with pencil and paper, and, again, as far as I'm concerned, that is cheating.
>So, I think your analogy simply fails.

Again you seem to think sight reading is *slow*. So in this view, would you also say that someone who block printed alphanumerics during the test and was *slow* at reading their handwriting was somehow *cheating*?

>> The important thing
>> you're supposed to show is that you recovered the *content* of the

>You are supposed to do the machine emulation *during* the 5-minute transmission
>of the exam, not during the ensuing test to see if your machine emulation
>was flawed. Do you see what I'm saying now?

Yes, and it's flawed. As long as the output of the modem is human readable,
and my sight read Morse is to *this* human, then the machine emulation has
been successful.

>What actually matters is that we try to test people in a way that satisfies
>the F.C.C. And I think they would prefer that you demonstrate that you

>still pass? This is an honest question. Surely there is in the history
>of the F.C.C. some indication of _their_ opinions in this matter.

Well I took my test *in front of the FCC*. They didn't seem to mind my
methods at all (they also allowed typewriter copy, and as I noted above,
people copying by typewriter don't know what they've copied until they
read it back either).

I didn't claim the method is efficient, just conducive of lively
conversation.

>> Well of course contests remove the problem by removing the necessity
>> of having *content* in the conversation. It's just a meaningless
>> formalized exchange, over quickly, and on to the next station so the
>> same contentless exchange can be repeated ad infinitum, ad nauesam.
>
>Oh, come on, Gary. The best part of contests is the fun, not the exchange.
>And even in the hottest 'tests, even the best contest ops take a few minutes
>to toss off a quick comment on occasion. It isn't all meaningless
>exchanges.

But *most* of it is. Remember the topic is *conversation* and what to
say on the radio. Contests don't promote conversation, in fact conversation
is actively *discouraged* by serious contest operators. Score is the goal,
not exchanging ideas. I didn't say that was *bad* in the context of contests,
but it isn't a good way to develop conversational skills on the radio.

Now it should be well known that I think most contests are wastes of time
and spectrum, but that's a separate issue. Some people participate in amateur
radio to fill the empty hours, I guess contesting is as good a way to do
that as any. Contests where substantial message content has to be passed
would even have some training value, but I don't know of any such contests.

And contests can be used for data gathering purposes on new equipment performance, or for studying propagation quirks. Those uses appear to be exceptions rather than the rule, however. Mostly, contests seem to be outlets for the Type A personalities who have to compete or die. If it weren't contesting, it would be some other type of game where competition for score is the goal. This is popular in our culture, with it's mania for competitive sports. I admit to being off the norm in having no interest in such empty pursuits.

Yep, that's the secret, and there's another secret, most people are
"cool" when you find the right way to draw them out. Think of strangers
on the radio as friends you haven't gotten to know yet. And remember that
discussions require at least two points of view. If you agree with a
person on everything, there's very little that needs to be said. Don't
be afraid to disagree with people (politely of course). That can lead
to some mind altering conversations.

Tim-

I think the sunspot cycle is still going downhill, so it could be 4 or 5 years before things start cooking. When the cycle is at its peak, you start to think of the guys from the other coast as pests. You want to talk to REAL DX, and they think YOU are!

Publishing and writing aren't effort? Being an advocate is not work?
I think not. Wayne has spent the better part of his life exhorting and
pushing reluctant people to get involved, to do things. That's work,
very hard work I can tell you.

Wayne has ideas, and he pushes those ideas. He was a sparkplug in the
early days of RTTY, he pushed FM and repeaters back when few hams
knew what they were, he started two of the first magazines dedicated
to microcomputers, and he's been constantly striving to bring technical
hobbies back into the schools, of this nation and of others. He has more
energy than ten ordinary people. His ideas don't always make sense, but
many of them do. Only the timid bat 100% because they only swing at the
softballs. Wayne takes swings at the hard stuff. Sometimes he connects,
sometimes he goes down swinging, but he does try.

-$1399 (1395?) in Denver, plus $59 for the remote control cable.

-I've heard one on the air last weekend, the owner seemed pleased.

-There have been a couple of postings wondering how to do out-of-band TX.

-I played with one today at the Denver HRO; it seemed quite comfortable to use, but for the most part just an incremental update from the FT890.

-HRO wonders when ICOM will come out with "theirs", and says until now the TS50 has been the mobile of choice (the 900 they feel will be the 50's first competition).

-I forgot to ask about optional CW filters (options? built in?)

-After my early-adopter FT736 fiasco, I wouldn't buy a new rig until more feedback comes in. Yaesu or anyone else.

Hi,
I became a ham in 1975 when I was 19 years old. I was the interested in the electronics aspects, homebrewing etc.
Over the years, I have grown fond of chatting to people, learning about others, the world I live in and soon.
These days, I never have talks about ham radio, DX, etc. I am happy to pick up the mike and talk to friends around the world on the way to work. I use a TS50 in the car.
What you do with ham radio is really up to you. Find a chat-pal somewhere and have fun. You certainly dont have to talk electronics, ham radio or whetever.
And as far as contests are concerned, I sincerely wish they did away with them. Whats is the point of 'working' stations just to exchange a number is beyond me. Oh well, at least contest weekends are great for avoiding the radio.
Peter, KC1QF/ON9CGV

3352. Are ordinary alkalines re

Newsgroup: rec.radio.amateur.misc

DM>I was in a Radio Shack the other day and I overheard a salesperson selling
DM>someone a battery charger, and he was clearly claiming that it could recharg
DM>alkaline batteries. He even sold them ordinary RS alkalines, so we're not
DM>talking about the newfangled "rechargeable alkalines" which can be recharged
DM>something like 25 times.

They are selling a product called the "Super Charger" . I have one that
I ordered on one of the late night Infomercials on T.V. They do work if
you do periodic recharging while the cells are still good. They will not
recharge 'dead' cells like you can with NiCd's. They work real well if
you keep two sets of batteries for everything you use alkalines in. I've
been doing this and it's been a year now and I haven't had to replace
any batteries.

DM>I found no charger that claimed to charge ordinary alkalines.
Furthermore, DM>the catalog discussed the various battery types and the
only type listed wit DM>the word "rechargeable" were NiCd's.

This is understandable as it isn't actually a Radio Shack product. By
the way, was this the new catalog? They just released a new one within
the last couple of weeks but haven't had a chance to look a my copy.
They are still charging $2 for it by the way but have a $2 off coupon on
your first purchase. This makes it free if you are actually buying
sometrhing else at the time.

DM>ARE ordinary alkalines rechargeable?

As I pointed out above, yes they are somewhat. Just don't recharge
them repetitively to try to get them back up to the 1.5V. I have tried
this and the batteries start leaking. You may be better off in the
longrun trying something like the rayovac renewals although I have yet
to try these as I have never liked Rayovac Alkalines.

|> operators have frequently bounced their radio transmissions off the Moon.
|> Usually using VHF (30 to 300MHz) or UHF (300 to 1000 MHz) frequencies.
|> These frequency bands almost never bounce off the ionosphere, so to get
|> long distance communications (intercontential), hams bounce their signals
|> off the Moon. It ain't easy, they need high power and directional
|> antennas and low noise sensitive receivers. It's called "EME".

I have a problem with one of the diagrams in the ARRL Handbook
(if my memory serves me correctly). There is a diagram of a
plane wave incident upon the surface of the moon and the resulting
reflected wave follows the contour of the surface.

NOT! Look at incident angles and look at reflected angles
and that is not the shape of the reflected wave. Unless
I'm doing something wrong.

3355. Need formula for VHF/UHF path loss

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-29 22:54:18 UTC
From: morris@grian.cps.altadena.ca.us
Message-ID: <1994Aug29.225418.9929@grian.cps.altadena.ca.us>
Source record: 260897

The subject ine is pretty concise. I'm trying to locate a set of
formulas for the range 50-500 mhz for calculating path loss so I can
figure fade margins.

Ideally, I'd enter:
On the TX end:
power output, frequency, feedline loss, antenna gain,
antenna altitude, latitude and longitude

On the RX end:
20db sensitivity, feedline loss, antenna gain, antenna
altitude, latitude, and longitude

I'll write it if I can't find it - but I need something to start with.
After it is written I will post the program as shareware on several BBSes.
The "shareware fee" will be the cost of the postage for shipping a new
floppy (with the updated program) to the user.

If anyone has a decent similar program source code, please let me know.
It may be a decent starting point.

3356. MASTER FREQUENCY FILE: Review and critique

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-29 22:58:58 UTC
From: mc@shore.shore.net
Message-ID: <33tp7i$atu@shore.shore.net>
Source record: 260894
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.ham-radio,rec.radio.amateur.misc

Radio monitoring is, as we all know, a fascinating hobby whether it is shortwave listening or to higher frequencies on a scanner. However, its often difficult to know where to listen for specific kind of traffic or to identify what you're hearing. The SW broadcast area is well covered by the WORLD RADIO HANDBOOK, RADIO DATABASE and other publications and the utility bands have the GILFER and KLINGENFUSS guides. However, the scanner buff has a bit of a problem. Due to the fact that most of the VHF-UHF bands are pretty much line-of-sight, reference materials have to be regional in nature. Those scanner listeners who are lucky to live in certain areas like New York City, Boston and other large Metro regions have access to the SCANNER MASTER publications and there are, of course, specialized materials such as books covering the Aeronautical bands available. THE MASTER FREQUENCY FILE by James Tunnell and Robert Kelty (TAB Books Division of McGraw Hill, ISBN 0-8306-4131-9 $29.95) is one of these reference materials which covers U.S. Federal agencies all across the country.

THE MASTER FREQUENCY FILE is an awesome compilation of frequencies, callsigns and user IDs on the 25MHz to 2110 MHz radio spectrum and makes it easy to find and listen to communications from hundreds of sources including:

- The Federal Bureau of Investigation (FBI)

- Drug Enforcement Administration (DEA)

- U.S. Secret Service (USSS)

- U.S. Customs Service (CUSTOMS)

- Internal Revenue Service (IRS)

- Immigration & Naturalization Service (INS) and the Border Patrol

- U.S. Marshal Service

- National Park Service (NPS)

- Alcohol, Tobacco and Firearms (ATF)

- Bureau of Prisons

- Federal Communications Commission (FCC)

and a whole lot more.....

THE MASTER FREQUENCY FILE is national in scope and organized by state. Also included are state maps showing counties, some simple BASIC computer programs, a discussion on secure voice communications and a master resource

file. This is a list of a variety of specialized sources, publications and recources around the world ready to assist the radio hobbyist or professional in finding that specific organization, fact, facility or product that is difficult to locate. This also lists U.S. military installations worldwide and a compilation of international Aerospace, Security and Defense exhibitions arranged by month.

THE MASTER FREQUENCY FILE is a bit expensive at $29.95 but well worth it if you are into monitoring Federal radio communications. Authors Tunnell (also author of LATEST INTELLIGENCE published by TAB BOOKS) and Kelty have done an excellent job of organizing this wealth of information into a ready reference work where the answer to your question can be found quickly. In my opinion the master resource file (which is over 125 pages of contacts) is extremely valuable and more than adequately justifies the $30.00 price tag.

I'm interested in VHF radios. I had a friend once who used his to make phone calls as well as speak to friends over fairly long distances. Any info to get me started?

3366. Re: FLAME the FCC

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-30 00:48:34 UTC
From: "Philip F. Wight" <pwight@rahul.net>
Message-ID: <CvBowz.Bt@rahul.net>
Source record: 260905

Why can't the ARRL set up a volunteer group to work with/at the FCC to help get the licenses issued/renewed? We do the licensing work for them - why not help out with some other chores? A few guys working one day a month or one day a year, even,could make a big dent.

Speaking of Wayne, does anyone know why suddenly he lost control of the CD Review mag he started? That mag used to be fun when Wayne published it. After that, it lost its sense of humor. That's one thing I always enjoyed about wayne.

Cheers, Phil

>but it isn't a good way to develop conversational skills on the radio.

Gary, you've got some weird ideas. What do you think the contesters
do when there's no contest? Ragchew, of course. But least contests
are helping to promote Part 97.1(e), international goodwill.

Out of the 168 hours each week how many hours are the bands used
in contesting? Remember, some weekends there are no contests.
And even if there is a contest on a particular weekend, use an
unused band.

You want conversation *and* content? For most QSO's this gives rise
to a contradiction.

>Now it should be well known that I think most contests are wastes of time
>and spectrum, but that's a separate issue.

Probably because what few contests you've participated in you took
too seriously (are you a Type A?). Who cares what your score is -
heck, don't even keep score - just make a few dozen contacts and quit.

Mostly, repeated opinionated postings on newsgroups taking opposing
viewpoints just to stir up controveries

>seem to be
>outlets for the Type A personalities who have to compete or die.

I couldn't agree more!

>I admit to being off the norm in having no interest
>in such empty pursuits.

Posting on UseNet is not an empty pursuit?

Greater than 2 MeV Electron Fluence for 28 AUG is: 8.0E+06

SYNOPSIS OF ACTIVITY

Solar activity was very low. A new Region, 7771 (N08E76),
made its way onto the disk. A mature spot defines the region.
The other visible group, 7770 (S09W27), continues its quiet
decay.

Solar activity forecast: solar activity is expected to
persist at very low levels.

The geomagnetic field was mostly quiet.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 29 aug-31 aug

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01

I received this message from the KE3Q DXCluster Node in the Wash, D.C. area.
Sorry to report this news 73 Steve K3SA.
==========

Msg #361 From: N4MM Date: 29-Aug 2356Z Subj: P5RS7, a dead duck.
ARRL DXCC News Release announces P5RS7 decision.

In response to continued questions concerning the P5RS7 operation of
December 1992 - January 1993, the following is provided:

While reviewing the original documentation and photographs, the DXCC staff
noted some apparent discrepancies. DXCC staff then requested some additionin
formation. After more than one year, additional infformation was received.
During that year, the ongoing investigation into the paperwork and
photographs suggested that the operation may have taken place from
another location. Documentation in support of P5RS7 accreditation
did not establish that operating permission had been granted by
appropriate authorities, nor did it establish that the operation took
place from the territory of North Korea.

After reviewing all available information, there will be NO DXCC credit
for the P5RS7 operation.

The file had been closed on this issue. This determination is based
upon Section I., 7) and 12) of the DXCC rules.

3372. Are Ordinary Alkalines Rechargeable?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-30 03:23:08 UTC
From: dmm@bud.indirect.com
Message-ID: <33u8ms$428@herald.indirect.com>
Source record: 260912

I was talking with a group on the air the other night and someone mentioned that Radio Shack sometimes hire people who don't always know what they're talking about.

I related a story about a recent visit, where the salesperson was selling a customer a battery charger that recharged ordinary alkaline batteries.

We're not talking about those newfangled rechargeable alkalines that can be recharged something like 25 times---I mean ordinary alkalines. The guy sold the customer the batteries along with the charger---I saw the batteries.

It's my understanding that ordinary alkalines are not rechargeable. So I say this on the air and someone else butts in and "corrects" me---he claims RS has a "special" charger that can indeed recharge ordinary alkalines.

Not wanting to start an on-the-air argument, I bow out of the QSO and run to my latest 1995 Radio Shack catalog. In it there's no charger that claims to charge any kind of alkaline battery. Furthermore, there's a discussion in the catalog about the different battery types and the only kind associated with the word "rechargeable" is NiCd.

Unfortunately, by this time, the QSO had broken up and I was unable to chime back in. So that other guy made me look like I was an idiot or something.

But, just in case---ARE ordinary alkalines rechargeable?

NOTE: The Effective Sunspot Number for 28 AUG 94 was 28.5.
The Full Kp Indices for 28 AUG 94 are: 2- 3+ 2+ 2- 1+ 2- 2- 1+
The 3-Hr Ap Indices for 28 AUG 94 are: 7 18 10 6 5 6 7 5
Greater than 2 MeV Electron Fluence for 29 AUG is: 6.9E+06

SYNOPSIS OF ACTIVITY

Solar activity increased to low levels. A new region is
at the east limb near S07. This region is the likely source of
multiple C-class flares - the largest was a C7 at 29/1247Z.
Frequent optical surging was observed from this site. This area
is also moderately large and bright in Yohkoh imagery. This is
a new region from last rotation and is likely in a growth
stage. A small new high latitude Region emerged at S23E06 and
was numbered as new Region 7772.

Solar activity forecast: solar activity should continue
at a low level with M-class flares a distinct possibility.
A more confident assessment will be possible when the region
at the east limb rotates into view.

STD: Frequent C-class flaring has been occurring over the last
24 hours, probably from the new region near S07. In addition,
the background x-ray flux has increased more than a full
magnitude over the last 24 hours, again almost certainly a
result of the appearance of this new east-limb region.

The geomagnetic field was mostly quiet. Brief unsettled
conditions were observed at some sites between 0600-0900Z.
Energetic electron fluxes were at low to moderate levels.

Geophysical activity forecast: the geomagnetic field
should continue at mostly quiet levels.

Event probabilities 30 aug-01 sep

Class M 50/50/50
Class X 05/05/05
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 30 aug-01 sep

A. Middle Latitudes
Active 05/05/05
Minor Storm 01/01/01
Major-Severe Storm 01/01/01

B. High Latitudes
Active 20/20/20
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
Normal propagation is expected to continue during the next 72
hours, through 01 September inclusive. There is a moderate
probability that daylit paths may experience effects of short
wave fadeouts (SWFs) due to possible solar flaring from the new
region at the east limb. This region has exibited frequent
C-class flaring and has enhanced the background x-ray flux more
than a magnitude over the last 24 hours. It will be watched
closely as it rotates into view and transits the visible disk
over the next two weeks.

3375. Re: learning CW

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-30 04:02:05 UTC
From: gbrown@unlinfo.unl.edu
Message-ID: <33uavt$1hr@crcnis1.unl.edu>
Source record: 260916

There is one aspect about learning code that no one has mentioned. LISTENING is a more passive method of learning. One of the best ways of learning anything is to involve other methods...especially physical (motor) involvement. Sending code is no longer required for the exams, so many people do not practice sending at all anymore. But, in my opinion, learning and practicing to SEND is a tremendous aid in learning to receive. Passive learning is not very efficient.

I'll share my pages with the rest of the net. Make no promises that
these will work. I built this in the last three weeks while on
vacation -I am still on vacation- and have not had a opportunity to
test it yet. Your mileage may vary.

3379. French UHF band is (almost) dead

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-30 08:47:18 UTC
From: elendir@enst.fr
Message-ID: <33urmm$bsi@cismsun.univ-lyon1.fr>
Source record: 260926
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Hi,
this is just a warning to those who may want to use UHF
in France.
Our UHF band is (almost) dead.
The first kick was to allow some part of the 433 MHz range to be
used without license for almost every purpose : remote control,
short range comm, etc... The power was intially limited to 10 mW
but has been raised to 500 mW, without any specifications on the
antennae. But who controls the actual output power ?
Next, the lowest part of the band [430 to 434] is constantly polluted
by the harmonics of a system called SYLTRAK, every 15 kHz. As a result,
Paris's UHF repeater has an awful "horse-like" background noise, and
UHF packet communication has become extremely painful.
At the moment, the 434 to 440 MHz part seems safe, but is reserved for
ATV.
And last, the ATV devoted 23 cm part has been requested by the civil
flight operation for other RADAR operation. Since we have a "secondary
status" on the all the 23 cm band, we fear that the whole band will soon
be completely unusable.
The 11 cm band has never been opened. It is required to have a permit
from the army, but they never grant it.

VHF :

The 6 meters band, which was opened between 50.2 and 51.2 under severe
restrictions will most likely be closed very soon, due to problems with
some security equipement embedded in trains.

Isn't France a paradise for hams ?

What to do ?

73 !

I assume that you are refering to figure 3 on page 10-8 in
The ARRL UHF/Microwave Experimenter's Manual.

> NOT! Look at incident angles and look at reflected angles
> and that is not the shape of the reflected wave. Unless
> I'm doing something wrong.

The surface of the moon is covered with all sizes of irregular structures
such as hills and stones (large and small). The signal is scattered in all
directions from these structures (assuming their size is about one
wavelength or larger). If we look at the picture, it shows only the large
mountains (craters). In the first picture a wave front (narrow pulse)
is approaching the surface. In the second picture only those scattered
signals that eventually are going to hit the receiving antenna on earth
are shown. These signals form a wave front which is a copy of the large
structures on the surface and this explains the dispersion (and hence
coherance bandwidth) of the signal. It also explains the libration fading,
since a slightly different wavefront will hit the receiving antenna and
some scattered signal cancel each other, when the direction and distance
between the moon and the EME station(s) vary.

I live in the Louisville, KY area. Around here, the "seasoned" hams seem to have a real problem with repeaters being used by rag-chewers. Even though the rag-chewers follow proper procedure and are courteous, they still don't like it. They feel that using a repeater for a "round table" or an extended QSO defeats the original intent of having a repeater in the first place, which was to extend the range of HTs and mobiles. The "seasoned" hams want the rag-chewing to be done on simplex. It has gotten so bad around here that a couple of guys just turned their repeaters off, and another guy shuts his down every evening.

I have mixed feelings about this issue. I understand the point that the repeater owners are trying to make, but I also wonder if it is practical to expect all hams to use a repeater just the way you want it used. If no FCC rules are being broken, and everyone is being friendly and stuff, I don't see how much "enforcement" can be done.

Just my $0.02 worth...

>I worked W6RO on Sunday evening. Long Beach ARA members have schedules for
>operating the station. Guests in the Queen Mary hotel with amateur licenses
>are also permitted to be guest operators of W6RO.

If use of W6RO (as W6RO) is contingent upon being a hotel guest, could it
be construed that W6RO is being used for commercial purposes, to promote
the hotel?

There is a difference, here, between someone who rents out their home with
a shack as a vacation cottage to someone who will operate the shack under
his own license, and a 'club' station attached to a hotel.

One would hope that all licensed amateurs would be invited to operate at
the landmark.

3385. Number of Call Signs

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-30 13:13:20 UTC
From: tdenny@bigcat.missouri.EDU
Message-ID: <Pine.3.89.9408300820.A5777-0100000@bigcat>
Source record: 260835

OK, basic math quiz time -
Everyone knows that the FCC says they've used up all the call signs of a certain type in some areas, i.e. the 1by3 calls in districts 0, 4, 5, 6, 7, & 8 and 2by2 Extra Class calls in Hawaii, Alaska, & Puerto Rico.
I have seen articles on the history of call signs in the US, and how the FCC has allocated them and for what reasons over the years, however, I was wondering just how many call signs (that is, combinations of letters and numbers) does the FCC really have at its disposal. Therefore I humbly submit the following;

1by1 calls: (4)(10)(26) = 1,040
1by2 calls: (4)(10)(26)(26) = 27,040
1by3 calls: (4)(10)(26)(26)(26) = 703,040
2by1 calls: (3)(26)(10)(26) + (1)(12)(10)(26) = 23,400
2by2 calls: (3)(26)(10)(26)(26) + (1)(12)(10)(26)(26) = 608,400
2by3 calls:
(3)(26)(10)(26)(26)(26) + (1)(12)(10)(26)(26)(26) = 15,818,400

Which gives a raw total of 17,181,320 (of which about 3.5% are in use currently (600,000)).
If one removes the suffixes that obviously would not be issued (i.e., ASS, KKK, HCI, etc.) the number is reduced by about 4700 or so (remove 940 for every by3 suffix removed).
Of course, there would have to be a fundamental change in how the FCC allocates call signs, but this may not be too far off, depending on how the FCC implements the "vanity" call sign program. That is, it could make virtually all the combinations available.
Just food for thought. Also, since I don't have a Cray or other supercomputer immediately available, there could be error/oversight in the above, any additional insight will be taken graciously.

Just a few corrections, since we do not have all of the "A"s for prefixes...

>1by1 calls: (4)(10)(26) = 1,040

actually: (3)(10)(26) = 780

I don't know how fair it is to count these, since the FCC has not ever (I believe) issued them. Shouldn't matter too much since there are only 780 of them, anyway.

>1by2 calls: (4)(10)(26)(26) = 27,040

actually: (3)(10)(26)(26) = 20,280

>1by3 calls: (4)(10)(26)(26)(26) = 703,040

actually: (3)(10)(26)(26)(26) = 527,280

The rest are correct, I believe. (We only have AAA-ALZ, right?)

>2by1 calls: (3)(26)(10)(26) + (1)(12)(10)(26) = 23,400
>2by2 calls: (3)(26)(10)(26)(26) + (1)(12)(10)(26)(26) = 608,400
>2by3 calls:
>(3)(26)(10)(26)(26)(26) + (1)(12)(10)(26)(26)(26) = 15,818,400

So the total is now 16,998,540 with the 600,000 or so currently in use being (still) about 3.5%.

The point is made, but the math is off a little: The US only has the
AA-AL callsign block. Therefore, the 1by* calls should multiply by 3 not
4. Still, makes you wonder how they decide their "out of" callsigns ...

>
>Which gives a raw total of 17,181,320 (of which about 3.5% are in
>use currently (600,000)).

Actually, this doesn't QUITE work because only AA-AL are U.S.
prefixes. Ever wonder why a Novice who upgrades to Technician
puts a "/KT" after their sign, when all others are "AG, AA, AE?"

AG, AA, and AE are valid US prefixes. AT doesn't belong to the
US, but KT does.

W, N, and K calls:
1x1: 3 * 10 * 26 = 780
2x1: 3 * 26 * 10 * 26 = 20280
2x2: 3 * 26 * 10 * 26 * 26 = 527280
2x3: 3 * 26 * 10 * 26 * 26 * 26 = 13709280
1x2: 3 * 10 * 26 * 26 = 20280
1x3: 3 * 10 * 26 * 26 * 26 = 527280

A calls (ONLY AA-AL are allowed. A6 = Oman, AP = Pakistan, etc.)

2x1: 12 * 10 * 26 = 3120
2x2: 12 * 10 * 26 * 26 = 81120
2x3: 12 * 10 * 26 * 26 * 26 = 2109120

Summing up, we've got 16,998,450 minus the FUK, FUC, ASS, KKK,
and Q-signals. So there are are still well over 16 million
possible calls, and only 600,000 in use. Sorry, but evenually

everyone will have to receive at 2x3 call, as this is by far
the biggest pool. Hey, in the UK, they give "2E" calls to
their equivalent of "No-Code Tech"s.

Announcing two new Ham-related mailing lists!

qrp-l: This is the qrp mailing list, previously maintained by Bruce
Walker at Think.com. It is for discussions about the design,
construction, and use of qrp (low power) radios and related
equipment.

arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL
VEC, for announcements to VEs and VE teams.

These two lists join the other ham radio related lists maintained here at
Netcom:

barc-list: Information, discussion and anouncements for the Boston Amateur
Radio Club and hams in Eastern Massachusetts.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
barc-races: RACES in Massachusetts and emergency management
fox-list: Fox hunting and Radio Direction Finding
ky1n-list: VE exams in New England
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and
in some foreign areas.
arrl-nediv-list: bi-monthly bulletins from the ARRL NE Division director

These lists are automatically maintained by Majordomo. To sign up or
inquire about these lists, send mail to listserv@netcom.com with the
following in the body (subject is ignored) of the message. <listname>
is the name of the list to subscribe to.

To subscribe: subscribe <listname>

To unsubscribe: unsubscribe <listname>

For more information: help

To post (to the two-way lists), send your message to <listname>@netcom.com

Mail should be sent to listserv@netcom.com, not listserv@world.std.com.

In article <Jq1QOkc.anaylor@delphi.com> Andrew Naylor <anaylor@delphi.com> writes:
>Is there a process for getting the Yaesu 5200 into crossband mode?
>I figure so, but havent found a way.

Yup. Set up the freqs you want on both bands, set squelch, DTMF, etc., and
then turn the rig off. Hold down the "RPT" button and turn the rig back
on. Presto, you're there.

3394. Family Amateur Radio Event (FARE)

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-30 15:27:55 UTC
From: lenwink@indirect.com
Message-ID: <lenwink.203.000F779B@indirect.com>
Source record: 260869

F.A.R.E. happens Saturday, September 17, 1994. It's an ARRL
sanctioned event with some ARRL officials attending and being in the
FARE Dunk Tank...250 gallons of ice cold water! This ham radio event
is for everyone; kids & women too. It takes place at Rawhide Theme
Park in Scottsdale, Az. The swap meet begins at 6:00am, with the main
pavilion opening at 9:00am. There will be rides for the kids as well as the
NASA Spaceball for kids & adults, a dunk tank filled with "notables"!, many
operating stations including, HF voice & CW, packet, atv, MARS, AMSAT,
and much more. All stations are hands on by attendees. We also have an
event station signing Senator Barry Goldwater's callsign, K7UGA. The
Maricopa County Sheriff, Joe Arpaio will be there to speak, and the
Sheriff's helicopter will fly in for all to inspect PLUS SO MUCH MORE.
Be there.
73, Len, KB7LPW
PS. It's worth the trip from anywhere!

3395. Senator Barry Goldwater Event Station

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-30 15:30:01 UTC
From: lenwink@indirect.com
Message-ID: <lenwink.204.000F808F@indirect.com>
Source record: 260870

At FARE, we will have 2 HF event stations, a satellite station, and packet stations, all on the air using K7UGA, Senator Barry Goldwater's callsign. If you make a contact, we will send a special QSL card to you. No exchange card is necessary.
The event takes place Saturday, September 17, 1994.
73,
Len, KB7LPW

3396. SSTV Question

Newsgroup: rec.radio.amateur.misc

Source record: 260854

Mark Monninger (rapw20@email.sps.mot.com) wrote:

: I dunno for sure, Derek, but my guess is that very few people actually use
: <CW> on the air. They learn it to pass the tests (which are sent in perfectly
: formed, non-QRM'ed fashion) and then don't use it. There are exceptions, of
: course.

: No flames, please...just making an observation with no value judgements
: attached.

Well, no flames intended, but this is certainly not my experience. Many of the hams I talk to at club meetings, etc., use CW on the air; many do not.

According to a scientific survey conducted by the ARRL (performed by a survey-research company, random samples, etc.), an overall 38% of hams use CW on a regular basis. This date includes ARRL Members and Technicians, so it is not weighted in any particular direction. While it is not a majority of hams, it is not a number that I would characterize as "very few." I suspect that your impression comes more from the informal data you gather from the circle of hams you talk to on the air. If you don't operate CW, you may find that your data are weighted more toward the no-code end. If I were to survey my on-the-air contacts, I would find that they are 99% CW users, but I don't even know where my microphone is. :-)

I am glad that there is room on the bands for all of us.

All I can tell you is that on TV(here in Europe) there is plenty of ads
pushing 'an intelligent battery charger' with a microchip which charges
ordinary batteries.
Perhaps they have found a way of charging ordinary alcalines through
intelligent charging (whatever
that may be). Sometime ago I was told that it couldnt be done. One hundred
years ago, someone also said we cant get to the moon.

>> Has anyone used a Radio Shack 36' mast to mount a tribander?
>> I've got an old high-gain with traps and would like it up cheep and easy.
>> Any better ideas?

About 10 years ago I installed one of those hummers for my Dad,
WA4CVA (now a SK) with a Alliance U-100 TV rotator and a Cushcraft
"Jr. Boomer" for two meters. My brother helped with the installation,
and we had good solid footing for the mast, heavy screw-in anchors for
the guys, and (as I recall) three sets of guys installed "by the book."

About a year after the installation, a heavy windstorm came up and
the antenna began to oscillate back and forth (partially because there
was no rotor brake on the TV rotator) and the resulting vibration caused
the top section to buckle and collapse, rendering the top portion of
the mast useless and severely damaging the antenna. Winds were about 50
MPH gusts, as I recall.

The long and short of it is that I would not trust one of those
masts to carry anything other than a fixed, non-rotatable TV antenna
or a two-meter vertical. The extra weight of even a small rotator
at the top is too much if any appreciable wind side load develops.

IMHO; others may disagree. BTW, my brother had checked several
times to make sure the guys stayed properly tensioned, and my Dad
turned the antenna into the prevailing wind as the gusts increased,
but to no avail.

[nothing of note]

> -joe

OK, Joe, let me make it real clear for you. (Shall I type slower?)

I made reference to the cost of the equipment since a large (subjective) number of hams will spend large sums on gear and NOTHING on support. The fact that I *have* money to spend on equipment (and proper maintainance) is do to the fact that the gear I own is working. Not constantly being replaced. (Read that as sold at a loss as in the example I had orginally posted.)

I worked at Diawa Electronics for couple of years as the service manager. Previous jobs included a couple of amateur product stores (retail) and one manufacturer. I am a regular vendor at the TRW swap meet. Tell me about amateurs. I've been watching, selling, repairing their stuff and talking with them for the past 25 years.

Spending time and or money on something isn't a measure of how clever you are. It is simply a matter of making the commitment to do a job correctly.

The orginal posting was in regards to those amateurs that somehow see any little inconvienence as a "major ripoff" from the vendor/seller/manufacturer. It wasn't a personal attack on you, pull you head out of your ass and grow up a bit. Nothing on this net goes un-noticed, learn to live with it or go away.

FIRST CALL FOR VOTES (of 2)
unmoderated group rec.antiques.radio+phono

Newsgroups line:
rec.antiques.radio+phono Audio devices and materials of yesteryear.

Votes must be received by 23:59:59 UTC, 20 September 1994.

After this CFV appears on news.announce.newgroups it will be sent to
the mailing list <boatanchors@gnu.ai.mit.edu>

This vote is being conducted by a neutral third party. For voting
questions only contact rdippold@qualcomm.com. For questions about the
proposed group contact Bill Robie <robie@umbc7.umbc.edu>

CHARTER

Discussion of the use, repair, and collecting of early standard-broadcast
radios, phonographs, and any other similarly-related items designed for home
entertainment sound receiving or sound reproduction.

This group is intended to be a forum for those with an interest
in sound-receiving and sound-reproduction equipment that was generally
manufactured prior to the widespread use of transistors. The group's
discussion, however, will not be strictly limited to vacuum-tube and
mechanical devices, and those with an interest in early transistor radios,
early televisions, and other such items that reflect pioneering audio
technology will be welcomed.

Exclusions:

Amateur radio equipment discussion will be directed to the existing amateur
radio newsgroups and to the boatanchors list. This is only done because
those groups present an established forum for people with an interest in
classic amateur radio equipment. Those classic amateur radio collectors who
also share an interest in early standard-broadcast equipment will fully
appreciate the desire to separate the two interests. Their valuable
expertise will, however, be most welcome in all forums.

Since the summer of 1993, there has been an ongoing discussion among
those interested in antique radios and phonographs (and other related
equipment and materials) about the possibility of forming this
newsgroup. That small core of enthusiasts has rapidly grown in
number, and now includes representatives of museums, technical
specialists, collectors, and novices with an inquisitiveness about
sound reproducing and receiving equipment of the past. With

enthusiasm for the preservation and enjoyment of these superb
expressions of human inventiveness steadily increasing, the time has
come to establish a forum through which knowledge of their history,
restoration, and use can be shared by experts and newcomers alike.
This proposal represents the essence of what an Internet newsgroup can
accomplish--it can produce a collective source of knowledge from which
useful information can be drawn for years into the future.
Bill Robie, August, 1994

HOW TO VOTE

Send MAIL to: voting@qualcomm.com
Just Replying should work if you are not reading this on a mailing list.

Your mail message should contain one of the following statements:
I vote YES on rec.antiques.radio+phono
I vote NO on rec.antiques.radio+phono

You may also ABSTAIN in place of YES/NO - this will not affect the outcome.
Anything else may be rejected by the automatic vote counting program. The
votetaker will respond to your received ballots with a personal acknowledge-
ment by mail - if you do not receive one within several days, try again.
It's your responsibility to make sure your vote is registered correctly.

One vote counted per person, no more than one per account. Addresses and
votes of all voters will be published in the final voting results list.

Also, WxY? calls were set aside for learning institutions. If you
have a callsign database on your computer, search for all WxY? calls
that are CLUB calls and you will see what I mean! i.e. W5YG belongs
to Rice University. On a side note, I wish the FCC would of stuck
to their original plan, because now you have Univesities with "regular"
callsigns. i.e. WB5FND belongs to my univeristy, Univ of Houston.

Does anyone know any other call blocks that were set aside for special
assignment? (other than WR for repeater and WC for civil defence...)

3419. TNC-2 mods for 9600 pacsat use

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-30 22:33:37 UTC
From: johnm@weitek.COM
Message-ID: <CvDDC2.I7E@weitek.COM>
Source record: 260874

Some time back there was some discussion about the benefits of using
a higher clock rate on the TNC-2 when using 9600 baud on the pacsats.
Whether or not this is an advantage, I don't know, but I am kitting
up a bare TNC2 board, destined to be used with a G3RUH 9600 modem.
Can anybody tell me exactly what changes ? (the xtal obviously, but
what kind of Z80/SIO, other parts need to be changed ?

Thanks,

John Mcleod N6RCD.

Yup. The Amateur and Experiemental services share the same international callsign guidelines. The FCC assigns all 2x3s with suffix beginning with "X" to the Experimental service (actually, I thought they had to start with "K", too). The Lojack car retrieval system available in Boston and some other places holds (or held) the callsign KA2XGB.

>place, which was to extend the range of HTs and mobiles.
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

True, but extend the range to do what? Is the repeater to be used
only by low-power equipment in emergencies? I guess if the trustee
wants to do that, that's up to him/her. A good discussion on the
repeater should help bring the local hams together as a group, and
it's a common meeting point where everyone can listen and join in if
they want.

>The "seasoned"
>hams want the rag-chewing to be done on simplex. It has gotten so bad
>around here that a couple of guys just turned their repeaters off, and
>another guy shuts his down every evening.

Seems kind of odd to spend all that time and money on equipment, only
to leave the power switch in the "off" position because people use it.
If the users were considerate, and weren't doing anything to put the
trustee's license in jeopardy, turning it off for no reason other than
because people use it to ragchew seems rather spiteful.

>
>I have mixed feelings about this issue. I understand the point that the
>repeater owners are trying to make, but I also wonder if it is practical
>to expect all hams to use a repeater just the way you want it used. If
>no FCC rules are being broken, and everyone is being friendly and stuff,
>I don't see how much "enforcement" can be done.
>
>Kevin Barnes (N9RMG)

People doing extended ragchews with enough power to talk to each other
on simplex should do so, especially if it's a one-on-one. If you're
having a group discussion and would like others to join in, a repeater
is ideal, since it's a common "meeting place". I monitor the local
repeater outputs quite a bit, but I don't scan through the band all
that often - if a group met on simplex, I probably wouldn't know about
it unless I just happened to stumble on it.

Anyone carrying on an extended QSO on a repeater should check every
few minutes to see if someone wants in. In fact, I'd invite them in

explicitly - "OK, Bob, let's let the carrier drop and see if someone else needs to use the repeater - N9XTN".

As long as the ragchewers are considerate and give emergency traffic the opportunity to break in, I don't see the problem. But the trustee owns the repeater and can set any limits they want. Whether those limits make good sense is another question altogether.

>
> 73, Van - W8UOF

You cannot always amplify received signals as much as necessary to improve audible signals.

Often on our AM band dxpeditions using Beverages, we are limited by atmospheric noise, the level of which is dependent on the K index at that time. Some mornings the noise level is high, and signals get drowned out, other days the noise is almost non-existant, and even very low signal strengths make it through.

Just for info, we use 500 metre long beverages, aerial impedance transformers, tuned pre-amps giving just over 30dB variable gain, and Drake R7's or NRD 535's.

have always heard "no" on recharging "primary" batteries. Like carbon-zinc and akalines. If you try, the battery might "explode". Not "explode like a hand gernade or cherry bomb, but just leak some really yucky corrosive gunk that seems specially designed to do maximum damage to radios and flashlights.

Source record: 260877

Greg Bullough (greg@netcom.com) wrote:
: If use of W6RO (as W6RO) is contingent upon being a hotel guest, could it
: be construed that W6RO is being used for commercial purposes, to promote
: the hotel?
: ...
: One would hope that all licensed amateurs would be invited to operate at
: the landmark.
: Greg

Your last comment is true. W6RO is open for operation to all amateurs
who present a current valid amateur radio license, hotel guests and
tourists alike. Operating privileges are determined by the highest
class operator present, as usual when visiting another station.

I was a radio operator for the Long Beach club on the Queen Mary, W6RO
until 1988 when I left the area for work commitments. I hope to resume
my operation on board in a few months. When I do return to the area,
I will post what information I can find regarding current W6RO operations
here in this thread.

Let me add one footnote to my first paragraph... those comments were
the Long Beach club's policy as of 1988. I assume things have not
degraded during my 6 year hiatus to make them false.

Last-modified: $Date: 1994/01/02 22:00 $
Version: $Revision: 1.06 $

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source
of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group and
to news.answers every two weeks. You are now reading the first article, which
explains what rec.radio.info is, and answers some Frequently Asked Questions.
The second article is titled "Submission Guidelines", and you only need to
read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with
a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit
chat about radio. Rec.radio.info will contain informational, factual articles
only. Follow-ups are redirected to an appropriate other group, and further
discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it
was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered
presentation in rec.radio.info (even with cross-posting, only one message, with

a unique Message-ID, is propogated across the net). This tag also facilitates a pre-existing method of dropping or cancelling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:
/Newsgroups:.*[,]rec\.radio\.info/h:j
either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:
rec.radio.info:!s/:^
in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:
sequence
rec.radio.info
rec.radio.
at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, I will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for disussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is Mark Salyzyn. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@ve6mgs.ampr.ab.ca

Comments, criticisms, suggestions or questions about the group can be e-mailed to:
rec-radio-request@ve6mgs.ampr.ab.ca

But before you do so, please be sure to check out the "Submission Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. I receive information in my mailbox; I then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap (or possibly comp.newprod) may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, I would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. I

reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all I can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

brian@UCSD.EDU (Brian Kantor) has kindly supplied a mail list server for rec.radio.info. Non of the articles will be digested, due to their size, so you will receive individual mailings for every article posted to the group.

Mail sent to radio-info@ucsd.edu will be forwarded to the moderator and thus is an alias to rec-radio-info@ve6mgs.ampr.ab.ca

To subscribe and unsubscribe via the listserver; the format for that is

sub address radio-info
unsub address radio-info

where 'address' is your full mailing address. Send this request to

listserv@ucsd.edu

Note that the server will automatically delete any address that bounces mail. If you leave the address portion blank, it will try to deduce your address from the mail headers. This may not work if you are on bitnet, milnet or some other non-Unix host, so it is recommended to put your return address in any case. For example:

sub mymailbox@myhost.mydomain.mil radio-info
or
sub MEMEME01@DMBHST.bitnet radio-info

or something like that.

-- Will the material appearing in rec.radio.info be archived somewhere?

< Dated information here >

Yes. Still firming up details at the moment but here is a preliminary list:
- unbc.edu as maintained by Lyndon Nerenberg <lyndon@unbc.edu>
- nic.funet.fi maintained by Risto Kotalampi <rko@cs.tut.fi>
saved to /pub/dx/text/rec.radio.info currently stored as numbered files.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat

transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for news.answer. This requires co-operation and good will to be beneficial to the community in the rec.radio hierarchy.

I suggest reading the posting guidelines for more information. I am open to suggestions.

I thank the following individuals for their input into this article:
rec.music.info moderator Leo Breebaart rec-music-info@cp.tn.tudelft.nl
rec.radio.broadcasting moderator Bill Pfeiffer wdp@gagme.chi.il.us
Paul W. Schleck, KD3FU pschleck@unomaha.edu
Ian Kluft, KD6EUI ikluft@uts.amdahl.com

3431. Willco Memory Problem

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-31 03:16:02 UTC
From: willco788@aol.com
Message-ID: <340sli$p72@search01.news.aol.com>
Source record: 260781

If you own an IC-751 with the Willco ICM-1024 memory upgrade, you may have problems using a computer interface. There is a bad location in the ROM that will render the CIV bus inoperative. Fortunatly this will only affects about 40 units. There's no problem with the R71 and the IC-745 doesn't have a computer interface.

If you have this problem send E-mail. We will make arangements to replace your board.

Jack Albert WA9FVP

3432. RE: Are ordinary batteries chargeable?

Newsgroup: rec.radio.amateur.misc

From: JMAYO@pc-labs.scu.edu.au
Message-ID: <CvDqnA.I9p@scu.edu.au>
Source record: 260784

The "Inteligent Chargers" I have seen, I have noted they
have no power cord. Thus I am led to believe that they
are not in fact "Chargers" but purely Condition the battery
to obtain a longer usefull life.

Anyone out there who has purchased one of these
please inform if this is the case.

-----> Josh Mayo.

From: mancini@nova.ceas.rochester.edu
Message-ID: <340t68$8os@nova.ceas.rochester.edu>
Source record: 260782

Hello everyone!

I'm not sure if this is the right to place this message, but I have to start somewhere!

I'm interested in ham-radio and I would like to know what kind of equipment would be needed to reach europe (specially Italy). Of course, I also would like to know approximately how much I would have to spend to get such equipment.

Any information on how to get started will be greatly appreciated.

Cesar

3434. Looking for Morse code trainer seen Dayton

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-31 04:17:03 UTC
From: David Spoelstra <davids@truevision.com>
Message-ID: <34107v$mj@epic.truevision.com>
Source record: 260783

At Dayton this year I saw a company that had a very small morse code trainer. This unit was a small box with two push button switches and an earphone. When you turned the unit on, pushing the buttons would change the speed of the random code it sent. I picked up literature, but now I can't find it. Does anyone remember seeing this unit? Do you know who was selling it?

Thanks!
-David N9PGH

I think you will find the noise generated by the reflection of energy from the sun far greater than any energy reflected from any radio sources from deep space. The temperature of the Moon is in the area of 200 to 225 Kelvin. Temperatures of the strongest radio sources, other than the sun, are much less than that. I do not have a listing here at work to give hard numbers for other radio sources.

If you are interested in doing some of you on radio astronomy it is well with in an amateurs means to detect the stronger of the radio sources, the Moon and of course the Sun.

Hope this is helpful.

Source record: 260790

Jeffrey Herman (jeffrey@kahuna.tmc.edu) wrote:

: And an even bigger thank-you to the ARRL for their great email file.
: If you want to see what's in this goldmine of info send an email to:
: info@arrl.org

Thanks, Jeff. It sometimes gets discouraging to work a 70-hour week (paid only for 37.5 of them) and then get here in the morning and see some of the usenet participants trash us for our imperfections. (OF COURSE we have a few, just like anyone else.) I don't mind constructive criticism, but it is really more useful and constructive if it is not made into a personal attack. It should come as no surprise that we appreciate an occasional compliment, too. :-)

Sadly, I often see that we are being criticized for not doing something we already do, or for doing something that we don't do; I have done my best to find time in an already busy day to offer the occasional clarifying information. Even more sadly, I have seen us criticized *appropriately* on this forum *instead* of having the "constructive criticism" directed to the appropriate staff or to your Division Director who *can* change League policy.

I encourage all rec.radio.amateur participants to make your views known to your Division Director, by mail, email, telephone or in person at his or her many appearances at conventions, hamfests and club meetings! The info@arrl.org files have a list of HQ and ARRL officers email addresses, postal mail addresses, telephone numbers, etc. See also page 8 of QST. This forum has produced many excellent ideas and a wide spectrum of amateur community opinion. If it worth saying it is worth saying to the ARRL Division Directors, too. All of the Directors I have met feel that they would like to hear more from the silent majority, so their policy decisions can be made based on a wider range of opinion.

The ARRL does a lot of important things for Amateur Radio and offers a susbstantial array of membership benefits. (Ask info@arrl.org to send the services.txt file!) You may agree, or disagree, with some of the policy decisions made over the years, but the bottom-line question is "Is ARRL doing *anything* I consider important to Amateur Radio?" If so, support it, and use that support as a platform to change those things you believe we should do differently.

Anyhow, I don't want to blather on endlessly. Now that I have a bit more time (after preparing for my 6-hour EMC Seminar), folks should see a bit more of me here. :-)

One of the most succinct comments I ever heard in regard to ARRL's value was from Jack, WA4FMS, about twenty years ago. At an organizational meeting for a new club, the question arose as to whether or not the club members "wished to affiliate the club with ARRL." After a few minutes of meaningless blather, Jack stood up and said words to the effect that "This discussion is meaningless! You all use ARRL license manuals and "How to Become.." to learn the theory and regs, you use W1AW to learn the code and get proficient, and then you have the nerve to question the *value* of ARRL affiliation? Give me a BREAK!"

The vote was quick - and unanimous.

And for those who still doubt, if you're not a member borrow the August QST and read the quote from H.P. Maxim about why ARRL had survived while others had come and gone. Those words were true then and they're still true, and as long as the basic concept of "no special interest above the common good" prevails at Newington, the League will continue to continue, and others will continue to come and go.

[Sorry about the crosspost. Wasn't sure which group this should go on]

I'm currently saving up for Ham set. I'm planning to test in October, so I have till Late December or January to save money to buy what I need. I just bought a house in a development that does not allow antenna, so I'm more interested in hand held unit.

What I'm Looking for:
- Price $300-$400
- Multiband (if possible), or a good 2m unit
- Good, realible company (heard ICOM was good)

If you have any suggestion on what to look for, please e-mail me.

Thanks for any help,
mike

I find amateur radio very interesting but certain aspects a
real turn-off. The local Tuesday night 2 meter net is an
example. Of the 25 or so checkins, nobody has any traffic
and nothing is discussed other than the weather
(repeatedly) and the fact that they don't have any
traffic. Every once in a while I check in and try to
spark topics for discussion (e.g.: satelites or antennas or
whatever) but it is a waste of time. It seems like the
2 meter net is a social drop in of very bored individuals.
Am I alone in this or does it happen durng your local
nets?

I'm hoping for better when I get on HF.

VIDEO CONFERENCING OVER HAM RADIO

For those not familiar with SSTV, it allows you to enhance your
communications by including full color images. Instead of JUST TALKING
about a new boat, pet dog, grandchild, or whatever, you can exchange
full color pictures over ham radio using a voice transceiver.
A few years it cost kilobucks to buy special purpose equipment.
Today you can get started with a PC, a few $ of parts from Radio Shack
and free software. It's fun. It's interesting. It isn't expensive anymore.

Now back to the question ....

I try to keep up on everything happening in SSTV and never heard of anything
for the Mac. There have been a few homebrew SSTV projects for the IBM PC
the last couple years:

73, August 92 - ViewPort VGA
QST, January 93 - Pasokon TV
QST, January 94 - Vester

For more background on SSTV, products available, a bibliography, etc.
grab a copy of /pub/ham-radio/sstv_wefax_info from ftp.cs.buffalo.edu.
I'll gladly e-mail a copy to anyone to can't snatch a copy by ftp.

For a reprint of the January 93 QST article, send an SASE to:

John Langner
115 Stedman St. #U
Chelmsford, MA 01823-1824

>
>2) Any published projects involving hardware exclusively meant for

>conversion of fast-scan video frames into SSTV-format images?

The articles mentioned above only deal with sending and receiving images with voice transceivers. They do not address the problem of getting video (from a TV camera) into the computer. You will need a framegrabber to do this.

SB QST @ ARL $ARLB070
ARLB070 W1AW/125 operation

ZCZC AG35
QST de W1AW
ARRL Bulletin 70 ARLB070
From ARRL Headquarters
Newington CT September 1, 1994
To all radio amateurs

SB QST ARL ARLB070
ARLB070 W1AW/125 operation

W1AW/125 operation

On September 3 and 4, W1AW/125 will be on the air from 160 to 2 meters to contact amateurs in conjunction with the Hiram Percy Maxim 125th Birthday Memorial Celebration, for the full 48-hour UTC period. We will work CW, SSB, and RTTY, and hope to put you in our log.

During this special operation, W1AW will not transmit code practice or CW, RTTY or SSB bulletins. We will return to our regular schedule starting with the 0000z September 5 CW bulletin transmission. Details are on page 46 of August QST.

3455. IC-R71A Sensitivity Problem ? Help!

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-31 22:25:00 UTC
From: johnk@ATK.COM
Message-ID: <2E6503DE@msm.ATK.COM>
Source record: 260807

##

I have an Icom R-71A (secondhand) whose sensitivity rolls off about 12 dB
from 14 to 30 MHz. Checks of the front end switched filters indicate
everything is ok with no unusual losses. However, in looking at the LO
injection voltage to the first mixer, the 22-30 MHz VCO range drops off
dramatically in output when going up in frequency, like a 10 to 1 drop.
This does not occur over the rest of the tuning range.

The VCO in the synthesizer is a JFET followed by two bipolars, which appear
to just be wideband amplifiers. All the VCO and amplifier DC bias voltages
seem normal according to values in the tech manual.

Has anyone else seen this in an R-71A? Is there a known fix for this?

Please reply direct to "johnk@ATK.COM" or to the net. Thanks.

73 John WB4LNM

3456. 2M vs 70 cm

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-31 22:45:09 UTC
From: pruth@ocvaxa.cc.oberlin.edu
Message-ID: <34315l$5ul@news.cc.oberlin.edu>
Source record: 260803

I'm just getting into amateur radio and waiting for my
tech license to arrive. I'm debating whether to start
out with a single-band (2M) HT or break the bank and
go twin-band (2M and 70 cm). I'm wondering if 70 cm
capability is worth the extra expense of pricey HT
and dual-band antennas. Are the propagation characteristics
of 70 cm sufficiently interesting to make it a worthwhile
complement to 2M, or would 2M alone be representational
of the VHF/UHF spectrum? Is 2M becoming so crowded that
70 cm would provide necessary room to roam, or is there
always room at the table on 2M? My primary interests
for getting into amateur radio are Skywarn, stimulating
ragchews and enjoying the DX, such as it is, that 2M
has with the tropo ducts, E and F layer skip provides.
If someone can convince me 70 cm is worth my time and
money, and that 70 cm has unique qualities compared
with 2M, I will start out with a twin-bander and eat
peanut butter sandwiches for a while. Otherwise,
I'll be hopping aboard 2M on the cheap while Rat
Shack and others have "realistic" prices on their HTs.
Thanks, and all the best. --Bill Ruth, Oberlin, Ohio

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 31/2330Z AUGUST 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 31 AUGUST AND FORECAST FOR 01 SEPTEMBER - 03 SEPTEMBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 82/23

GOES satellite data for 30 Aug
Daily Proton Fluence >1 MeV: 1.9E+06
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 6.8E+06
X-ray background: B4.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Sep 02 Sep 03 Sep
Activity Low to moderate Low to moderate Low to moderate
Fadeouts Possible Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Sep: 84/26
COMMENT:One solar region continues growth and is still showing
M-flare potential.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 30 Aug
Learmonth 10 3223 2322
Fredericksburg 4 3
Planetary 4 4

Observed Kp for 30 Aug: 1111 1221
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Sep 5 Quiet
02 Sep 5 Quiet
03 Sep 5 Quiet
COMMENT: Recurrence suggets quiet conditions to continue until 6 Sep.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
31 Aug normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Sep normal normal normal
02 Sep normal normal normal
03 Sep normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
31 Aug 25 near predicted monthly values

Predicted Monthly T-index for August: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
01 Sep 20 Near predicted monthly values
02 Sep 25 Near predicted monthly values
03 Sep 25 Near predicted monthly values
COMMENT: IPS HF Communications Warning 1 was issued on 30 August and
is current for interval 31 August to 2 September. Strong spread F
observed during local night.

I got my license a few weeks ago and I bought a dual band HT. The only reason that I went for the dual band is that it has a much wider receive that the single band (I got a Yaesu FT-530). This makes it more fun to listen commercial/police/emergency/cellular frequencies. But as far as activity on the 70cm amateur I can't really find much in the Vancouver area and I spend most of my time on 2M.

> ^^^??????????

Yep. I'd forfeit my license if I got that one.

3460. Johnson radios:need manuals

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-01 01:23:03 UTC
From: pazar@sr.hp.com
Message-ID: <CvFFuG.DyF@srgenprp.sr.hp.com>
Source record: 260809

Fellow Yams,

I have gotten a couple of E.F. Johnson business band radios I'd like to convert to the ham bands, and am in need of schematics/service manuals. The radios are;

Fleetcom II (UHF)
model 528 (VHF)

If anyone has manuals for these, I'd like to hear from you. I'm willing to pay a reasonable price for these books...photocopies will do just fine.

Thanks!

3461. Santec FM-240

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-01 01:54:29 UTC
From: acs@news.sccsi.com
Message-ID: <343c8l$k56@tattoo.sccsi.com>
Source record: 260816

I have a borrowed Santec 240 WITHOUT the manual. I've found the "enter" key and such. My question is, does this rig have transmit "PL" capability or just receive "tone-squelch" type stuff? The problem is , I need a xcvr with transmit PL on 103.5 for some repeaters, but, I can't seem to toggle the PL on here using the "enter" key that lets me select the actual PL freq.

Did I make myself clear here? In a nutshell, does the Santec 240 have a way to turn the TRANSMIT PL on?

Thanks, and 73 de A.C., W5EZM in Houston

3462. California QSO Party/ WACC

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-01 02:54:40 UTC
From: zf8bs@twg.com
Message-ID: <1994Sep1.025440.5093@twg.com>
Source record: 260811

If you're a county hunter or a contester, or maybe even both, mark your calendar for the first weekend of October. That is when the biggest and most popular of all the state QSO parties takes place. There are real prizes QST won't even mention--bottles of our famous CQP Private Reserve red for the top 20 stations, certificates for each of the state winners, and this year we are bringing back the most popular of all CQP memoribilia: the CQP T-shirt. Following is the CQP Announcement for 1994 together with a rules summary for the "Worked All California Counties" Award. These two go side by side--you could try for years and never find all the 58 California counties, but all 58 will be on for this one weekend in October. That's because there are enough crazies in NCCC to go charging out to the wilds to put all 58 on for this contest. Last year we had 17 people find all 58. Can you? Come play with us in CQP and enjoy yourself while you find them.
Bruce Sawyer, AA6KX
President, Northern California Contest Club

W.A.C.C. Rules:
1. Contacts may be made on any amateur radio band or mode. (No repeater or digipeater contacts allowed.)
2. QSL cards for contacts made on or after October 1, 1987 may be submitted for the W.A.C.C. award.
3. A QSL card must be presented for each of the 58 counties.
4. Each QSL card must have the county claimed, printed or written, on the card by the person issuing the card.
5. All your contacts must be made from the same county.
6. Portable and Mobile units may be worked.
7. You do not have to be a member of the NCCC.
8. Your QSL cards will be returned with the W.A.C.C. Award.
9. Send your application and 58 cards and $3 or 10 IRC's (to cover expenses) to:
NCCC W.A.C.C. Award
c/o K. O. Anderson, K6PU
P.O. Box 853
Pine Grove, CA 95665

The following announcement was in September QST, though the section on "Awards" was edited significantly:

1994 California (CA) QSO Party (CQP)
Sponsored by the Northern California Contest Club

Begins: 1600 UTC - 1 October 1994 Ends: 2200 UTC - 2 October 1994

OBJECT: Stations outside of California work as many California stations in as many CA counties as possible. Stations

in California work anyone.

EXCHANGE: California stations send QSO number and county. Stations outside of California send QSO number and State, Province, or Country.

QSO POINTS: Each complete non-duplicate Phone contact is worth 2 points. Each complete non-duplicate CW contact is worth 3 points. No partial contact credit. Duplicate contacts must be clearly identified in log.

MULTIPLIERS: California stations count states (50) and Canadian Provinces (VO/VE1-7 and YV1/VE8) for a possible total of 58. All others use California counties for a maximum of 58. CA stations on a county line may be claimed as a multiplier for any or all of the counties they give in their exchange. Number each multiplier as worked.

SCORE: The total score is the total number of QSO points multiplied by the total number of multipliers (58 Maximum).

FREQUENCIES: 160, 80, 40, 20, 15, 10, 6, and 2 Meters. WARC band contacts do not count. Suggest CW on 1805 and 40 kHz up from band edge. Phone on 1850, 3850, 7230, 14250, 21300, and 28450 KHz. Novices 10 kHz up from band edge and 28450. Try CW on the half hour. Try 160 meters at 0500 UTC; 80/75 meters at 0300 and 0700 UTC. Try 147.54 MHz at 2000, 0000, and 0400 UTC.

CLASS ENTRY: Single Operator, Multi-Single, Multi-Multi, California County Expedition, Mobile, and Novice/Tech. Single Operator entries limited to 24 hours maximum; off times must be clearly marked in the log and be a minimum of 15 minutes. Multi-Operator entries may operate the full 30 hours. Stations may be worked once on CW and once on Phone per band. Single Operator and Multi-Single entries are allowed only one transmitting signal. All CW contacts must be made in the CW sub-band except for 160 Meters. MCW is not permitted. All contacts must be simplex. California stations that change counties are considered to be a new station and may be contacted again for point and multiplier credit. California stations operating on a county line may be counted only as one QSO.

ENTRIES: All logs and signed summary sheets must be submitted to: NCCC, c/o Ken Anderson, K6PU, Box 853, Pine Grove, CA 95665. Entries may be submitted in CT Version 8 or 9 format with .SUM and .ALL files on 5 1/4 or 3 1/2 diskettes (no 2.88M diskettes) with a signed hard copy summary sheet. Label each diskette with call entry category and state/county/province/country. All entries must be postmarked no later than 15 November 1994. Please include $1.00 for results

if desired.

Entries with 100 or more QSO's qualify for the special CQP T-shirt; please include your size (L/XL) and $8 if you qualify and would like this special award. Entries of 200 or more QSOs must include duplicate check lists. For a CQP paperwork package containing log and summary sheets, county abbreviations, and contest records send a business size SASE to the above address.

AWARDS: Certificates - To top Single Op entry in each CA county, state, province, country, and stations with 100 or more QSOs.

Trophies - To top three non CA Single Op entries, top three CA Single Op, top CA Multi Single, top CA Multi Multi, top Single and Multi Op CA County expeditions, the Mobile (multi-county) Single Op and Multi Op with the most QSOs.

Special CQP Wine Award - The top 20 CA and top 20 non-CA Single Op operators will receive a personalized bottle of NCCC Private Reserve California Wine. Winners under the age of 21 will receive a non-alcoholic personalized award.

Special Awards - To the CA and non-CA Single Ops with the most QSOs, the most CW QSOs, the most Phone QSOs, to the top CA and non-CA Single Op low power entries (200 watts or less output), to the top CA and non-CA Single Op Novice/ Technician entries, to the top scorer outside of the USA and Canada, and to the top club in California (5 entries minimum - NCCC and SCCC are ineligible).

Bruce Sawyer, AA6KX

NOTE: The Effective Sunspot Number for 30 AUG 94 was 30.3.
The Full Kp Indices for 30 AUG 94 are: 1+ 1- 1+ 1o 1o 2- 2- 1+
The 3-Hr Ap Indices for 30 AUG 94 are: 5 3 5 4 4 7 6 5
Greater than 2 MeV Electron Fluence for 31 AUG is: 3.9E+06

SYNOPSIS OF ACTIVITY

Solar activity returned to a low level. Region 7773
(S08E61) produced frequent C-class flares. Some real growth
occurred (not just lack of foreshortening) in this region.
Mixed magnetic polarities were visible in the center of the
region and a weak delta may be forming there. However, the
region is basically bipolar. Toward the end of the period, the
background x-ray flux was decreasing which indicates a slight
cooling of Region 7773.

Solar activity forecast: solar activity should be low to
moderate. Region 7773 retains the capability of producing
isolated M-class flares. An X-class flare from this region is a
slight possibility. Old Region 7765 is due back to the east
limb on 03 Sep. This region produced 5 M-class and 10 C-class
flares last rotation but was decaying in the western hemisphere
and is not expected to be as active this rotation.

The geomagnetic field was mostly quiet during the period.

Geophysical activity forecast: the geomagnetic field
should be quiet to slightly unsettled for the next three
days.

Event probabilities 01 sep-03 sep

Class M 50/50/50
Class X 10/10/10
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 01 sep-03 sep

A. Middle Latitudes
Active 10/10/10
Minor Storm 01/01/01
Major-Severe Storm 01/01/01

B. High Latitudes
Active 15/20/20
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

HF propagation conditions were normal over all regions.
No significant changes are expected over the next 3 days,
through 03 September inclusive. A gradual increase in MUFs is
expected over the next week in response to enhanced ionizing
radiation from Region 7773 and possible additional enhancements
from old Region 7765 if it returns to the east limb. There is
a real risk of SWFs on daylit paths during possible flare
activity from Region 7773.

------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

!!END-DATA!!

NOTE: The Effective Sunspot Number for 29 AUG 94 was 27.8.
The Full Kp Indices for 29 AUG 94 are: 1o 1- 3- 1+ 1+ 1- 1o 1-
The 3-Hr Ap Indices for 29 AUG 94 are: 4 3 12 5 5 3 4 3
Greater than 2 MeV Electron Fluence for 30 AUG is: 6.8E+06

SYNOPSIS OF ACTIVITY

Solar activity became moderate. New Region 7773 (S07E73)
produced M1/SF flares at 0833Z and 1037Z. Numerous C-class
flares also originated from 7773. Recent white light
observations classify this region as a moderate size F class
group with some interior spot distribution. Plage intensity was
moderate to high. It is likely this region is in a growth phase
due to flare frequency and plage brightness.

Solar activity forecast: solar activity should be
moderate. The possibility of an X-class flare from Region 7773
exists. A more confident assessment will be possible once the
region rotates farther onto the disk and reliable magnetic data
can be obtained.

The geomagnetic field was quiet.

Geophysical activity forecast: the geomagnetic field
should be quiet at mid latitudes and quiet to slightly
unsettled at high latitudes.

Event probabilities 31 aug-02 sep

Class M 60/60/60
Class X 15/15/15
Proton 05/05/05
PCAF Green

Geomagnetic activity probabilities 31 aug-02 sep

A. Middle Latitudes
Active 10/10/10
Minor Storm 01/01/01
Major-Severe Storm 01/01/01

B. High Latitudes
Active 15/15/20
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

HF propagation conditions were near-normal over all
regions. Minor SWFs may have been associated with the two
M-class flares today and could have affected Africa, Europe,
and Asia. There is a high probability for additional SWFs over
the next 72 hours from the new region rotating into view.
There may also be a chance for an isolated major flare which
could more seriously affect daylit paths. More will be known
over the next few days as the region is scrutinized in greater
detail. In general, normal propagation is expected to
continue. Increases in MUF are expected over the next week and
should continue for as long as Region 7773 remains active and
radiation-emissive.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max, and end times are defined as: B = Before, U = Uncertain, A = After. All times associated with x-ray flares (ex. flares which produce associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Get on ten meters and work ten ten-ten numbers contact. After
yo have work these ten send it to your local ten-ten contact person.

When you have your ten-ten number you can work other sub group
of the ten-ten group, ie forty-niners.
Good luck,

>Any better ideas?

Yeah--don't do it. I was told by a salesperson that they only sell stuff they
can make a good profit on. My experience and opinion is that if you want
quality, go elsewhere. Your tribander is an expensive piece of equipmet;
don't take chances.

Of course, these are only mere opinions of mine. But I'd spend a few bucks
more--even if I had to wait.

The most interesting story is how Wayne Green lost Byte magazine - his wife left him and, in the divorce settlement, grabbed Byte magazine. I think she left him for one of his editors of Byte!!

I notice he never talks about that in his columns. Maybe someone can elaborate as the loss of Byte mag was a big deal...

We used a Radio Shack 4-section mast to hoist a 3-element beam with a
large, heavy rotator this year at Field Day. It was guyed at the top and
at one point in the middle. IT BENT!!! More guying would _definitely_
help, but the thing just had too much weight at the top.

If you're _very_ careful, you can use the RS masts as _temporary_ (e.g.
Field Day) supports for small beams, but I sure wouldn't recommend them for
extended service.

I'm a non-contester (well, I work Field Day and the PA QSO Party), but I find that I have very little problem coexisting with the contesters. The really big ones tend to have a phone section and a cw section, each on different weekends. I just work the other mode (another point for cw?). Smaller contests don't really take up the entire band, and a rag chewer can usually find a spot well away from the activity. And once in a while, yes, I have to just wait out the weekend because everything is saturated with a contest. But I've got a life :-), and can normally find something else to do that particular weekend.

This is a pretty eclectic hobby, which is one of the things that's held my interest for the past forty years. There's bandspace for everybody, and a new mode to try if your usual one is too difficult because of a bunch of other guys having fun.

Just remember, it _is_ a _hobby_!!

From: thomasr@acpub.duke.edu
Message-ID: <344hc5$5an@news.duke.edu>
Source record: 260825

My two cents for the database! Keep in mind that I've been on HF
for less than one-half year, so...
I enjoy DX contacts and the QSL cards are a nice memory of the chats.
I send QSL cards to all of the people for whom I can find addresses. This
is something I enjoy doing. Even though I don't enjoy the costs involved,
I never ask for a SASE. Seems to me that if each side of the contact deals
with the postage, it comes out even---or am I missing something.

In <33veao$hk9@cville-srv.wam.umd.edu> ham@wam.umd.edu (Scott Richard Rosenfeld) writes:
>the biggest pool. Hey, in the UK, they give "2E" calls to
>their equivalent of "No-Code Tech"s.

Errrm - I believe the no-code tech is a little more like the UK's Class-B license. The 2* series is given to Novices, 2*0 are class A Novices (VHF/UHF with HF) and 2*1 are class B Novices (VHF/UHF only).

The * depends on where in the UK you are, and is similar to the G* prefix.

The real confusion arises when you have a club station. They have different G* prefixes, and I can't remember all of them. Sorry to all those GD, GJ and GU clubs!

Novice call Full call Club call Country
2D GD Isle of Man
2E G GX England
2J GJ Jersey
2M GM GS Scotland
2U GU Guernsey
2W GW GC Wales

And on top of that, there's the good old GB special event prefix.

With a full call or a club call, the number after the prefix indicates the class of the license. A 2-letter suffix is always an A license, and was issued before the second world war. A three letter suffix uses the following numbers to indicate an A or B license:

Class A Class B
0 1
2 6
3 7
4 8

The number 5 with a three-letter suffix used to be used for reciprocal licenses (and isn't any more), and the number 9 is for experimental licenses (please don't ask me what this means!). Current licenses are in the G0 and G7 series, and once G7 has finished it is planned to use G5 for class Bs.

And I bet you thought it was going to be easy!

Scott

3477. Is my 900mhz cordless phone safe?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-01 13:49:44 UTC
From: weaver@vagus.vth.colostate.edu
Message-ID: <344m5o$1mve@yuma.ACNS.ColoState.EDU>
Source record: 260736

We recently bought a panasonic 900 mhz cordless phone. I
was wondering if anyone knew the watt output of the phone,
or what the fcc allows in the 900 mhz cordless phone band.
There was nothing written in the phones manual, and I did
call panasonic to eventually get bounced to their engineers
who still didnt seem to know how many watts it was. Could
they be hiding something, or are they really that stupid
as to not know the watts of a phone that they build? Maybe
the fcc should require them to divulge the stuff.

Anyone have any ideas ?

The coordinating body here in NC says there are no 2m repeater channels
available; thus our relatively new club has only a 440 repeater (will be
putting up a 6m repeater soon).

> My primary interests
>for getting into amateur radio are Skywarn, stimulating
>ragchews and enjoying the DX, such as it is, that 2M

>If someone can convince me 70 cm is worth my time and
>money, and that 70 cm has unique qualities compared
>with 2M, I will start out with a twin-bander and eat
>peanut butter sandwiches for a while.

440 makes it much easier to transmit and receive through buildings, etc.
Seems to make it easier to hit repeaters from in a car with an HT and no
external antenna, too. Much less frequent interference on repeaters from
distant machines during band openings than 2m. Crossband repeat can be a
real nifty thing to have sometimes, too.

> Otherwise,
>I'll be hopping aboard 2M on the cheap while Rat
>Shack and others have "realistic" prices on their HTs.

It is a good time to buy an HTX-202. I just got a rat Shack flyer yesterday
with a sale price of $199 advertised.

In article <1994Aug31.145924.17054@arrl.org> ehare@arrl.org (Ed Hare (KA1CV)) writes:
>Thanks, Jeff. It sometimes gets discouraging to work a 70-hour week (paid
>only for 37.5 of them) and then get here in the morning and see some of the
>usenet participants trash us for our imperfections.

You begin to go down the wrong path when you mistake criticism for lack
of gratitude.

> (OF COURSE we have a few,
>just like anyone else.) I don't mind constructive criticism, but it is
>really more useful and constructive if it is not made into a personal
>attack.

True. You should not make the criticism you hear or read into a personal
attack. That is difficult, when it is an organization in which you work,
or perhaps even your area of responsibility which is being criticized.
However, I have rarely seen specific names mentioned here. I have, however,
seen some organizational comments taken very personally.

Perhaps, Mr. Palm, management expert that he is, can dust off his management
skills and provide a quick course in accepting business feedback graciously.

>Sadly, I often see that we are being criticized for not doing something
>we already do, or for doing something that we don't do;

Education is part of running a business, too. It's called PR. Like it or
not, perceptions are real, and people make decisions based on them. If
people don't see what you're doing, then you need to be more effective in
showing them. That's all.

> I have done my
>best to find time in an already busy day to offer the occasional
>clarifying information.

If you barely have time to produce a response, then take care that the
response that you provide is not colored by that. Sometimes no response
is better than an impatient one.

For example, you have here, rather than receiving a compliment with a
gracious 'why thank you,' responded with a laundry list of why this
forum makes you so miserable.

Not real appropriate.

> Even more sadly, I have seen us criticized
>*appropriately* on this forum *instead* of having the "constructive
>criticism" directed to the appropriate staff or to your Division
>Director who *can* change League policy.

Now this is VERY inappropriate. It comes across as trying to quash League Members' and other Radio Amateurs' expresssion of their thoughts in a public forum of their own choosing. For years, the staff, directors, and officers have had a forum of their own, QST, and have filtered dissenting opinions rather high-handedly. In fact, they frequently used the journal to belittle dissenting opinions.

Ed, I don't know if it's what you intend, but it comes across as if you are saying 'go through channels, where we can decide what spin to put on your expression of opinion...'

As a organization run by the Membership, the League doesn't have the luxury of putting on blinders. At this point, I frankly expect my Division Director to be reading this forum (I'm willing to see the League foot the bill for an account, which may also be used for League business-related e-mail, if that's what it takes) in order to stay in touch with what people are saying about things.

But I *really really* have a problem with League Staff trying to get the membership to not voice their opinions.

To be blunt, Ed, it's not what I pay you for. Express any opinion you want in this forum, but do not, under your ARRL hat and signature, try and get the members you serve to be quiet. Or to re-direct them to a place where other members-at-large can't hear them. Don't.

>I encourage all rec.radio.amateur participants to make your views known to
>your Division Director, by mail, email, telephone or in person at his or her
>many appearances at conventions, hamfests and club meetings! The
>info@arrl.org files have a list of HQ and ARRL officers email addresses,
>postal mail addresses, telephone numbers, etc. See also page 8 of QST. This
>forum has produced many excellent ideas and a wide spectrum of amateur
>community opinion. If it worth saying it is worth saying to the ARRL
>Division Directors, too. All of the Directors I have met feel that they
>would like to hear more from the silent majority, so their policy decisions
>can be made based on a wider range of opinion.

Good. Are they reading THIS? If not, then their words are empty.

>The ARRL does a lot of important things for Amateur Radio and offers a
>susbstantial array of membership benefits. (Ask info@arrl.org to send the
>services.txt file!) You may agree, or disagree, with some of the policy
>decisions made over the years, but the bottom-line question is "Is ARRL
>doing *anything* I consider important to Amateur Radio?" If so, support it,
>and use that support as a platform to change those things you believe we
>should do differently.

I do support it Ed. And because I do (by sending in my check), I believe that I have a right to make my views known, on the corner of 33rd and Madison if that be my choice. Now, for me alone you might not be expected to stop by and listen. However, if a lot of hams are gathered at 33rd and Madison, and the Directors choose to ignore them because they didn't choose the time and place, woe be unto them.

And, by the way, I also believe that the staff (that means *you*) should exercise some restraint in counter-pointing the views of the membership. We are, after all, an organization of members. The views of the members prevail. The staff is there to serve, not to shape, the will of the Amateur Radio community. Even if the staff believe that will is wrong. And yes, most of the staff are members, but as such they must still take care not to use their position to overly influence membership opinion, and to avoid the perception of doing so.

That is why I have difficulty with an ARRL Laboratory Supervisor trying to direct the flow of League Members' opinions away from a commonly-available forum of discussion.

>and they're still true, and as long as the basic concept of "no
>special interest above the common good" prevails at Newington, the
>League will continue to continue, and others will continue to come and
>go.

I agree. And I think that it's very important that we number among those prohibited 'special interests' the interests of the ARRL officials and staff. That's why I'm somewhat concerned about the way that those individuals are present and absent in this forum. I see the staff expressing opinions, when that is rightly the role of the elected representatives and of the membership. And I see at least some staff members trying to shape the membership's choices about how they will use this forum to communicate amongst themselves.

The struggle which most organizations (governments, religions, whatever) have is always 'who serves whom.' In order to keep control of this dilemma, it is usually necessary to make some clear policies and take some overt steps to make sure that the organization continues to serve its members.

The ARRL is no different.

On the other hand, a standard envelope put inside a business
envelope plus a dollar bill plus a QSL card weighs almost
EXACTLY 1/2 ounce so it gets one unit of International Airmail
postage on this end. Using bigger envelopes will raise that
cost for us.

Why can't DX stations get smaller QSL cards? We dont care about
pretty pictures (well I dont) or monster fold-outs. Buy generic
QSLs. It should be much cheaper for you too. Here, we can get
the generics for about 3 cents each.

Is there some aversion to the smaller size QSLs popular here in the
states? Maybe no foreign printers can make such sizes?

>is something I enjoy doing. Even though I don't enjoy the costs involved,
>I never ask for a SASE. Seems to me that if each side of the contact deals
>with the postage, it comes out even---or am I missing something.

Yes Ron, you are missing something. And that is the fact some people's
cards are in higher demand than others. A station on a semi-rare
island in the Pacific might get dozens of cards a week depending on
how much he operated. To him filling box after box with W/VE cards
is not as exciting as for the guy at the other end who gets one
country closer to an award or something. When I first started out
I sent a card for every contact too but once I had enough to cover
every wall in the shack I stopped. I still gladly reply to all
incoming cards (SASE or not) but if a trickle of cards turned into
a flood I would very quickly reroute all non-SASE through the buro.

Another thing to keep in mind is that not everyone in the world
is blessed with low postal rates. There are several countries
where even a dollar or an IRC is not enough to mail a QSL card
1st class.

The long and short of it is if YOU WANT the other person's QSL
then send an envelope and appropriate postage because chances
are very good that if you want a card from them so do alot of
other people. Even for W/VE cards, many people will happily
trade cards with no postage or envelopes included but if you
need that card for WAS or VUCC or something then an envelope with
a stamp usually guarantees a prompt reply

Well, I do not know Steve, Derek, but I got interested into Amateur Radio because it is cool :). Seriously, I have moved from CB and SWL to become an amateur operator. Now I'm a Tech+ going for General (knock on wood). I am interested into learning about the hobby, but sadly enough I've discovered that VHF is not the way to go. You're somebody after you get into HF and CW. This has been my perception so far. If they do talk about the hobby, that's fine and dandy. However it is hard to get to know people around, I have found that it is very rough to start on VHF. (Hence the reference to a bar full of couples) Yes, I know that a piece of paper will not make me more interesting or more handsome (yes, you can always lie unless it is on ATV :) :) :)) but that does not mean that makes matters less forgiving. I've found that people tend to be more "friendly" on HF/CW. On VHF, if you are not member of The Club, or if you do not have a purpose for your QSO, you better get out of the way.

Expanding into other subjects besides ham radio is hard if you do not know the other person, that usually comes up after a relationship is done. Clubs should help out, by joining them you know what to expect. But starting out of the blue? Eeeek!

Should I be discoraged? Hell no, I will not be discouraged, I'll keep bugging people around :). That does not mean that it does not hurt.

Longer'n 5 years, but it seems to have burst upon the scene somewhere in the early '80s (maybe late '70s). I was off the air and not reading much ham literature during that time; before that, I'd never heard the term, and when I got back into things, it was in widespread use.

I'm curious, also, because it occurred during my hiatus, and I can't pin it down any more closely.

Hello Ham Gurus:

I will be getting into HF very soon. I need help in buying a used
HF rig. I dont know what to look for and what brand is better than
the other. I will be taking my General class licencse exam in the
first week of September. I am planning on going to a hamfest (several)
during this month. I would appreciate if the experienced people
will let me know what kind of used rig to buy (I am interested in
solid state rigs) and how much will they cost (general idea about price)

Thanks a lot

73 Dinakar kb8phz
desaid@muvms6.mu.wvnet.edu
PS: If someone has rig, I dont mind buying it as long as it is in
good working condition and fairly new (I mean in number of years).

The greater Philadelphia area is totally saturated with 2-m repeaters. As a result, you can find _your_ type of repeater, or type of people hanging out on a repeater, somewhere in the area. There are several machines that, while listed as "open", really aren't intended for anybody else except the regular users, and they'll quickly let you know. Other machines welcome rag chews, or just a bunch of people keeping one another company while they're driving. Proper protocol, especially with regard to leaving enough space for a newcomer or emergency traffic to break in, is expected, but beyond that, and common courtesy, it's "anything goes." If you're ever in the area, try the W3SK machine on 145.250 (negative offset) for a friendly, casual machine.

Other areas have similar situations, but as the population thins out, the choices are fewer. Still, shop around the band in any given area, and you may well find the type of machine you're looking for.

>The ARRL is no different.

And I think the reason that, over time, organizations tend to become
less responsive to members is that a feeling develops among staff that
"WE'RE the ones who've been fighting all the battles, WE'RE the ones who
know what/who the opposition is and how to counter it/them, WE'RE the
ones who REALLY understand the depth and details of the issues and
which issues are REALLY important, etc., etc. That can lead to a mindset
that tends to treat member input as somehow "less important" than what
the staff "knows" to be true.

I'm not saying that ARRL collectively suffers from this; I think
virtually ALL organizations have at least a tiny bit of that attitude
at the "staff" level. But, Greg is correct; it must be guarded
against lest the very things that made the organization prosper whither
and die, resulting in the demise of the organization itself.

More choices of people, mostly. There's lots of boring hams, same as for any group of people.

One suggestion for your local repeater: do you know these guys personally? Are they part of a club whose meetings you could attend? Do they get together on any regular basis for (Jargon mode on) eyeball QSOs? (Jargon off)

Try chatting with them in person, and getting to know them and their interests. Then you can probably encourage more interesting conversation on the repeater by asking some of them about subjects you know they're interested in. This is one of the advantages of a 2-meter machine...the users are close enough that you can meet them.

Hey, what's all this age-ist stuff? :-) Some of us OFs are courteous and succinct. Okay, we get off onto mullet fishing once in a while, or some other topic, but if it's one that interests you, join in. Or get a subject of your own going. A lot of the earlier complaints were that hams only talk about ham radio, and here we've got complaints because they're not?

I'd like to publicly thank Ian for his 2 1/2 years of service posting
the FAQ. Ian came along at just the right time to take over an
excellent resource originated by Diana Syriac KC1SP, but technical problems
and professional obligations motivated her to transfer the mechanical
chores (and most of the editorial ones) to a new maintainer. Ian has
been a true professional, coordinating cross-posting to moderated
newsgroups like *.answers and rec.radio.info, conducting the co-editor's
mailing list to provide broader-based formal feedback and editorial
changes, and even leading newsgroup reorganizations to make the FAQ's
reflect on an even better set of newsgroups. Like Diana's transition to
Ian, this doesn't reflect a "failure" on anyone's part, just a
realization that ultimately the FAQ belongs to the readers, and opportunities
for more individuals on the net to contribute and become trained
in FAQ maintenance techniques is desirable. We'd also like to think that
we're not just talking to ourselves, and the overall mission of the FAQ
and its content reflects a reasonable consensus of the readership.

If you've seen my latest posting of my Elmers Resource Directory, you'll
know that I've just made a hurried transition from declining services at
UNO to (hopefully) a more stable and better-supported commercial site in
the local Omaha area. The demands of maintaining the Elmers list
(including working out the bugs and slightly different interfaces at the
new site), reading and participating in news discussions at a leaf site
(which is running 4-7 days behind), as well as personal and professional
obligations, means that I can't in good conscience take over the FAQ

myself. However, I'm willing to continue to participate as a co-editor and contribute to the FAQ's ongoing maintenance.

If you have *any* interest in pursuing Internet information projects, and would like to learn more about automated posting techniques (or even Unix shell programming in general), please drop us a line. We'd like to see this valuable resource continue for some time to come.

3495. HAMS That Worked Chelean Co, WA Fires Aug94

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-01 17:13:52 UTC
From: ryanm@u.washington.edu
Message-ID: <34524g$sr1@news.u.washington.edu>
Source record: 260728

Hello all! I am relitively new to amateur radio with the call of KC7BYE. I am now getting invloved in emergency public service and had my first baptism by fire (pun intended) during the Chelean County fires in central Washington. I would like to here from any that were there about the things y'all did and things learned.

I was stationed over in Entiat (along the Columbia river between Wenatchee and Chelean). I got there towards the end of the fires so I didn't get any good field duty positions. We had a repeater setup on a ridge that looked up the Entiat river into the fire zone. That repeater made the whole ham op look professional since we had very good communications throughout the valley (actually the hams made it look pro, the repeater just made it that much better). Many of the fire fighters I talked to commented on how much they appreciated our help since their communications were non-existant. The fire boses especially like it because we would track specific people down that they wanted to talk to and we would put the two of them on the radio together instead of passing messages. Even a Marine Major was impressed with our capabilities. BTW I am a new member of King County ARES and becoming a member of King County SAR so we had a Communications/Command van setup for such a mission.

I think the biggest thing that made Amateur Radio look good is the dedication to excellence and the individual experience and skills brought in by the hams. One guy had mechanics tools with him at a remote staging area and was able to fix a fire truck on the spot without requiring a mechanic to come up and do the job. It is this kind of people that make Amateur Radio more than just communications.

We even had people ontop of mountains doing fire spoting for the Forest Service before the FS had people available to do the job. We had 4x4 recon teams that would check out sightings of fire by woried residents much to the relief of the FS.

I learned a lot about emergency communications and such during my 3 day mission and had a lot of fun. I am now just waiting to take classes on different areas of emergency work so that I will be ready for the next emergency.

I would like to exchange stories or here some of yours and answer questions if any. BTW we just had our debreifing so I also heard about the background stuff and events prior to my arrival. --Ryan

This is amazing. ICOM must have changed their policy on helping hams out with technical issues. Quite the contrary, ICOM sent me a photocopy of the schematic and the suggested taps points needed to do 9600 bps. Ron Parsons W5RKN came to my rescue and has a very eligant mod that requires only one solder joint to the main pcb board. I include it below. I have done this mod myself and it works fine. I'd be happy to answer any questions you might have concerning the mod.

Steve N7HPR (srbible@nps.navy.mil)

----------------------8<---

Below is a more complete description of my mods. Yes, please share these with anyone you feel like. I don't need the MAIN board pring as I have one in the 970 Service manual. Thanks anyway.

Ron W5RKN

==========

Icom IC-970 9600 baud FSK Mods

The following describes mods for 9600 baud FSK for an Icom IC-970. The mods require NO soldering or cutting on the IC-970, and are thus easily reversible.

Icom suggested mods for 9600 were:
* TX mod input at collector of Q59 on the main unit.
* RX Main at DET output in J29 (main unit).
* RX Sub at TSAOS output in J9 (main unit).

I made slight mods to Icom's mods:

* TX mod input at collector of Q59 on the main unit. This is available at the top of R51 with a micro clip. Ground is at the top of R60 with a micro clip. These resistors are about 3" back from the front of the Main unit and 2" from the right. The micro clips were attached to a length of RG-174 mini coax. No mods to board! The leads of the resistors appear to be painted. Scrape the paint off with a small, sharp knife (a small mod).

* RX Main output at TSAOM at J29 (main unit). Available on P85 (tone squelch option socket) under the top cover.
* RX Sub output at TSAOS at J9 (main unit). Available on P87 (tone squelchoption socket) under the top cover.

Two lengths of RG-174 mini coax were connected to a 6-pin headers with the center conductor on pin 4 and ground on pin 3. The headers were covered with heat-shrink tubing. The headers plug into P85 (MAIN) and P87 (SUB).

The three coax cables were routed to the back-right of the IC-970 case. The two TVJ hole covers were removed and replaced by two dual RCA jack boards. These boards were attached with a small bolt through the hole for the TVJ screws. Thecoax was attached to three of these jacks.

Hi Greg --

Lots of good points.... but a rather strident tone which may mask the value of what you had to say.

There are a kazillion (that's a whole bunch) places, including here, where members are expressing their opinion. ARRL elected folks and HQ staff can't be in ALL those places, although they are in a lot.

The advice "tell your Director" really is valid..... they can't be everywhere and hear/see/read every comment.

Hello,

I'm looking for some software, preferably Public Domain or Shareware that
does Longley Rice model computations. Even just a piece of C source code that
I could make a call to from PVWave would be fine.

Anyone know where I can find anything like this, or have a suggestion where
else to ask?

thanks,

73 de KC4GPW

SB DX ARL ARLD055
ARLD055 DX news

The items in this week's bulletin are courtesy of Tedd, KB8NW, the Ohio/Penn DX Bulletin, Joel, WU1F, and the Contest Corral column from the pages of QST Magazine. Thanks.

GHANA. In the first major contest operation from Ghana since 1982, members of the Central Arizona DX Association have big plans for the upcoming contest season. Their operations begin October 26 to November 4. Listen for 9G5TL in the CQ World Wide SSB Contest on October 29 and 30. QSL via Jack Sheldon, Jr., PO Box 31898, Mesa, Arizona 85275-1898.

Outside contest hours 3 stations will be up, with plans to hit all the bands. They will be on SSB, CW and RTTY modes. Operators include K5VT as 9G5VT, AA7NO as 9G5MB, KF7AY as 9G5WH, NZ7E as 9G5RM, WA7LNW as 9G5JR and WY7K as 9G5MT. QSL via their home calls.

A second group of CADXA members and some friends from the UK will be in the country from November 20 to 30. They will run a multi-multi or multi-single operation in the CQ WW CW Contest November 26 and 27. The contest call sign will be 9G5NN. QSL 9G5NN via G3SXW.

Outside contest hours listen for KC7V as 9G5MF, N7BG as 9G5TR, K7GE as 9G5JR, G3SXW as 9G5RW, GM3YTS as 9G5RF and G4FAM as 9G5CH. They will be on all bands with CW and some RTTY. QSL via their home calls.

John, GM0FQV, is in Ghana working on a construction project for the next couple of years. He was signing GM0FQV/9G1, but is now on as 9G1JB. Check 15 and 20 meter SSB around 2300z. QSL via G4XTA.

FERNANDO DE NORONHA. Listen for PY0ZFB between September 3 and 5. QSL via JL1KSI.

MOUNT ATHOS. Several German operators have set up RTTY gear for Monk Apollo, SV2ASP/A. He was on a few weeks ago testing the equipment. The best day to catch him is Sunday.

NAMIBIA. N0AFW, W5/AH9B and NH6UY are planning a DXpedition for the CQ WW SSB Contest in October. Pat, NH6UY, will be packing satellite gear. No call sign has been announced.

SINGAPORE. Listen for S61ARU September 5 through 9. This station will be operating from the site of the IARU Region 3 conference.

MARSHALL ISLANDS. Ken, V73C, will be assisting in a big V7X effort in the CQ WW SSB Contest. Other ops include KH6HH, KH6M and AH6IO. QSL direct via KH6HH.

COCOS KEELING ISLANDS. JA3IG will sign VK9IG from September 7 to 10. Check 40 through 10 meter CW and SSB. QSL via JA3IG.

AFGHANISTAN. PacketCluster spots from southern states and the east coast show YA/RW6AC on 20 meter CW. Check 14010 kHz between 1100 and 1230z. QSL via Box 16, Armavir, Russia.

SAIPAN ISLAND. JA6CNL, aka KR4VN, will sign KH0/KR4VN from September 10 to 13. For CW check 7025, 10102, 14025, 18070, 21025, 24895 and 28025 kHz. SSB should be around 7080, 14195, 18150, 21295, 24950 and 28495 kHz. Some 80 meter activity may be possible. QSL via JA6CNL, PO Box 11, Yahata, Kitakyushu, 805 Japan or via JARL.

THIS WEEKEND ON THE RADIO. Listen for the W1AW/125 operation September 3 and 4. We will be on 160 to 2 meters to contact amateurs in conjunction with the Hiram Percy Maxim 125th Birthday Memorial Celebration. Details are on page 46 of August QST.

Joel, WU1F, will be signing /125 on RS12. He also plans some HF RTTY with the same call.

The All Asian DX Contest on phone, sponsored by JARL, is from 0000z September 3 to 2400z September 4. Check page 138 of May QST for more information.

Info on the LZ DX Contest, Michigan QRP Club Labor Day CW Sprint and Radio Club de Panama XXIII Aniversary Contest is on page 101 of August QST.

3502. Maritime CW Usage Snippet of History

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-01 19:10:54 UTC
From: rdkeys@csemail.cropsci.ncsu.edu
Message-ID: <3458vu$r3j@taco.cc.ncsu.edu>
Source record: 260760
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

****
A Snippet of Commercial CW Operations History from August, 1994.
****

For all those who don't seem to think that commercial maritime CW
radio operations are significant, or that CW has any sort of real
use in the real world, anymore, consider the following......

A friend send a swl log of stations monitored running cw over the period
of AUGUST, 1994.

There were 406 entries logged.

This is one person's logging of stations, and is probably not a highly
statistical sound sample of the real world.... BUT, because it was
taken over a relatively long period of time, it is probably better
than anything else available as a simple indicator of CW usage.
Any statisticians lurking on the net, please reply.

The frequencies monitored were essentially all the commercial MF and
HF maritime CW frequencies. Stations were heard from around the world.

There were 6 US Coast Stations logged. KFS
KPH
WCC
WLO
WNC
WSC

These stations were logged 77 times.

Out of the 406 entries, these stations and their traffic comprised
approximately 19 percent of the total traffic heard from the swl's
location.

There were a number of foreign commercial stations/ships logged.

There were certain call prefixes that tended to be most prevalent.
The highest frequency of calls was the U series (70 entries).
Next were the 3 series (48 entries) and S series (45).
Next were the P (28 entries), 9 (23), and Y (22) series.
Next were the C (18 entries), D (18), and J (15) series.

If I am reading this correctly, that would tend to indicate that
even now, these US coast stations handle approximately 20 percent
of the world's CW traffic.

It would appear that there is still significant third world CW traffic
being passed through US stations.

It would appear that the third world countries are making great use,
still, of commercial maritime CW.

Information relating to who owns what ships registered in what
countries is not available, but would be of interest to see how
the country of registry affects the type of radio equipment used,
the stations worked, etc.

Anyway, for it tiny time/slice of history, it does show that there
is significant CW usage still, in the modern radio world in the
general maritime picture of things. Amateurs have it easy, since
they can get along now with a no-code license on VHF. But it is
still of some interest to note that among the commercial operators,
you don't even begin to be proficient at this game until you can
run a comfortable 20wpm, and beyond. How many hams out there can
muster 20wpm, reliably......

In article <gregCvGGoD.6sM@netcom.com> greg@netcom.com (Greg Bullough) writes:
>In article <1994Aug31.145924.17054@arrl.org> ehare@arrl.org (Ed Hare (KA1CV)) writes:

>> (OF COURSE we have a few,
>>just like anyone else.) I don't mind constructive criticism, but it is
>>really more useful and constructive if it is not made into a personal
>>attack.
>
>True. You should not make the criticism you hear or read into a personal
>attack. That is difficult, when it is an organization in which you work,
>or perhaps even your area of responsibility which is being criticized.
>However, I have rarely seen specific names mentioned here. I have, however,
>seen some organizational comments taken very personally.
>
>Perhaps, Mr. Palm, management expert that he is, can dust off his management

Greg,

And Rick should not take this as a personal attack? To back up your
statement, above, you might have suggested that the staff get some training,
etc., but instead you prove Ed's statement.

>> Even more sadly, I have seen us criticized
>>*appropriately* on this forum *instead* of having the "constructive
>>criticism" directed to the appropriate staff or to your Division
>>Director who *can* change League policy.
>
>Now this is VERY inappropriate. It comes across as trying to quash League
>Members' and other Radio Amateurs' expresssion of their thoughts in a
>public forum of their own choosing. For years, the staff, directors,

I think that Ed is talking about common courtesy here. A note to the
appropriate staff person before the posting to the newsgroup hardly censors
anyone. You might even get your problem cheerfully solved!

>Ed, I don't know if it's what you intend, but it comes across as if
>you are saying 'go through channels, where we can decide what spin to
>put on your expression of opinion...'

It didn't come accross to me this way.

>>many appearances at conventions, hamfests and club meetings! The
>>info@arrl.org files have a list of HQ and ARRL officers email addresses,
>>postal mail addresses, telephone numbers, etc. See also page 8 of QST. This
>>forum has produced many excellent ideas and a wide spectrum of amateur
>>community opinion. If it worth saying it is worth saying to the ARRL
>>Division Directors, too. All of the Directors I have met feel that they

>>would like to hear more from the silent majority, so their policy decisions
>>can be made based on a wider range of opinion.

So it should be no problem to contact the person who can solve your problem,
rather than bitching endlessly on the newsgroup.

>And, by the way, I also believe that the staff (that means *you*) should
>exercise some restraint in counter-pointing the views of the membership.
>We are, after all, an organization of members. The views of the members
>prevail. The staff is there to serve, not to shape, the will of the Amateur
>Radio community. Even if the staff believe that will is wrong. And yes,
>most of the staff are members, but as such they must still take care not
>to use their position to overly influence membership opinion, and to avoid
>the perception of doing so.

Gee Greg, now you're wanting to "quash opinions in a public forum". The very
thing you criticized Ed for.

Anyone know of a source to quickly obtain a current copy of
Part 15 of the FCC rules and regulations? I've sent two
letters to the US Government printing office and one to the
FCC asking for a current price list and ordering info, and
neither has responded over the course of the last 3 months.
In years past, a delay of a few weeks was tops to get the
order form and prices, place the order, and get the documents.
Now it seems they don't want to sell me anything. Any
suggestions?

NOTE: I'm looking for Part 15, not Amateur Service R&Rs.

Thanks in advance.

I realize that this may not be the most appropriate place to post this
but it was the only place that I could think of.

My nephew's Sea Scout group gave me a marine radio to take a look at
but they didn't give me the power supply cord (or it may not exist).
There is a socket on the back that I will attempt to duplicate in ASCII.
If anyone is familiar with the radio, I would really appreciate knowing
what functions the different pins access. There are six pins
represented by the numbers 1 - 6 in my drawing and the view is looking
directly at the back of the radio. The radio is a Motorola Triton
Nautilus 440. Any help would be greatly appreciated.

Socket:

Actually, I would venture that since the International Morse
Code test for a 2nd Class Radiotelegraph Operator requires 0ne
minute out of five minutes of solid copy at 16 WPM coded groups and
20 WPM plain language, that one is not considered *proficient*
until one can handle the minimum requirement for a 1st Radiotelegraph
ticket, which is 20/25 WPM *with ease* (and I'll bet the average
operator can handle 25/30 with ease, maybe higher).

It's an acquired skill, to be sure, rather than something requiring
superior intellect (no put-down intended by that), but it sure is a
neat thing to do well.

>Is the moon reflective enough of radio waves to use it as a reflective radio
>telescope?

Sure. Radio hams do it all the time.

Rumor I heard: The giant radiotelescope at Aricibo (sp?), Puerto Rico,
was built by NSA so they could spy on Russian VHF/UHF radio traffic via
moon bounce. When satellites made it obsolete, they gave it to the
radio astronomers.

Hello All.

Sorry I forgot to mention I was going on vacation and would not be able to
circulate SpaceNews via the Internet for several weeks. Things should be
back to "normal" next week. The missed editions of SpaceNews follow:

* DIGITAL SATELLITE NEWS *
==========================
This year's AMSAT-UK Colloquium yielded some news regarding the status
of several digital Amateur Satellites in various states of limbo.
Richard, G3RWL reported that the file server on LUSAT-OSCAR-19 has still
not been made available possibly due to a power struggle within AMSAT-LU.
The packet mailbox on FUJI-OSCAR-20 is gone forever due to a failed
computer. The analog (Mode JA) transponder is available, however. Two
uplink channels on KITSAT-OSCAR-25 have failed. This causes uplink
contention on the remaining uplinks. ITAMSAT-OSCAR-26 controllers have
not had enough time to fix the problems with IO-26 since it's on-board
computer crashed back in May. And POSAT-OSCAR-28 apparently came and
went, unlikely to ever be seen again.

* AMSAT-OSCAR-10 NEWS *
=======================
Several stations have reported that AO-10's downlink is FMing. Downlink
frequency instability is due to low and varying battery voltages. This
is a dangerous condition, and it is important that all ground stations
curtail transponder operations when the frequency of the downlink becomes
unstable to reduce the drain on AO-10's batteries and to allow them to
recharge.

* STS-68 NEWS *
==========
Launch of Space Shuttle Endeavour was aborted just seconds before liftoff
on 18-Aug-94. The primary payload for this mission is the Space Radar
Laboratory, part of a comprehensive effort under NASA's Mission to Planet
Earth program, to understand how the Earth's environment is changing.

* RS SATELLITE NEWS *
==========
Andy, RK3KPK, the operator of the RS satellite ground station RS3A reports that both RS-10 and RS-12 are both in good operating order. Andy reports there is a lot of RS activity from stations in Germany, England, Italy, and Switzerland. Activity from the Commonwealth of Independent States is low, although there are some active stations in the Leningrad region, Siberia, and Moscow.

The ROBOTs (autotransponders) are functioning well on the satellites. Andy reminds us of a special channel on RS-10 that operates on an uplink frequency of 145.850 MHz and downlink of 29.350 MHz. The RS-14/AO-21 CW beacon (145.822 MHz) can sometimes be heard coming through RS-10's ROBOT, which has a downlink on 29.403 MHz.

No word has been received regarding the launch of RS-15.

At the RS Command Station, RS3A, Andy operates through RS-10 only. The station consists of a 100-watt uplink transmitter that feeds a groundplane antenna. The downlink receiver is an R250M2 and contains 20 tubes. It is also very heavy and weighs about 95 kilograms. A 3 element yagi antenna is used for receiving RS-10 downlinks at the RS3A Command Station.

QSL cards for ROBOT contacts are available through DF4XW or Andrey Mironov, ul.V-Voloshinoj, d.11, kv.72, station Perlovskay, 141014, Moscow region, Russia, C.I.S.

[Info via Andy, RK3KPK]

* ENCRYPTION OF METEOSAT HRI TRANSMISSIONS *
==========
The following information was taken from the EUMETSAT Newsletter, Darmstadt, Germany.

Starting in 1995, HRI data will be transmitted in encrypted form. Test transmissions have already been scheduled this year. This service will continue with the new High Rate Image Transmission (HRIT) to be introduced with the Meteosat Second Generation, scheduled for launch in the year 2000. HRIT format will provide considerable enhancements to the information available from current Meteosat HRI transmissions.

For PDUS users to be able to use encrypted data they will need to obtain a decryption facility for use within their particular receiving station. Decryption will require a Meteosat Key Unit (MKU) at a cost of 700 ECU.

The apparent reason for the introduction of data encryption for meteorological data is its use by commercial enterprises, who do not contribute to the cost of data collection, but charge customers for the provided services.

There are no plans to encrypt analogue WEFAX transmissions of Meteosat data, so reception via SDUS (Secondary Data User Stations will be unaffected. By the time of the launch of the Meteosat Second Generation (MSG) satellite in the year 2000, a new and improved integrated digital

data transmission system known as LRIT (Low Rate Image Transmission) will replace the current analogue WEFAX data formats and MDD. This system will extend much of the functionality and flexibility which are only available currently to users of PDUS equipment. Selected sections of the LRIT data (e.g. MDD) already subject to encryption, will continue to be distributed on a restricted basis.

[Info via Manfred, TG9IKE]

* CHINA OSCAR NEWS *
==========
The Tinghua University Amateur Radio Club (TUARC) in Beijing, China started its long-awaited OSCAR-13 Mode B operation on Tuesday August 23, 1994, signing BY1QH. The satellite ground station consists of a Yaesu FT-726R tribander (2m/70cm/6m), a Cushcraft AOP-1 system (an A144-20T 146MHz Twist antenna and a 416TB 435 MHz Twist antenna), a Kenpro KR-400RC azimuth and KR-500 elevation rotors, a Tokyo Hy-Power HL-120U 70cm amplifier, and a GaAsFET 2m preamp. Uplink power is around 25 watts.

The low uplink power is due to a defective 70-cm power amplifer and a replacement for it as well as a broken Yaesu MH-1 mobile microphone are sought. Anyone who can help is asked to contact Rick, BZ1QL at any of the addresses listed below.

TUARC would like to thank CRSA, the Chinese Radio Sports Association, as well as Sam N3NFK, Bill KA3HPQ, Jackie KA3HPP, Chris AA2MJ, Allan WA2JVI, Presley N5VGC, Max G0PBZ, Rick N6NR and all of the people who have been concerned about TUARC operations.

TUARC can be reached via any of the following paths:

Packet - BZ1QL @ JA5TX.JPN.AS
Internet - bz1ql%ja5tx@bbs.arasmith.com or bz1ql%ja5tx@bbs.lbc.com
Airmail - Rick Niu BZ1QL

3511. 73cm Simplex

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-01 22:49:02 UTC
From: wwhitby@aol.com
Message-ID: <345lou$c1i@search01.news.aol.com>
Source record: 260766

I recently bought a dual band HT and was wondering about the band plan for 73cm. My ARRL repeater guide doesn't list simplex frequencies other than 440.000. What are the agreed upon simplex frequencies? Are they the unused repeater pairs in my area?

Thanks in advance

From: Dave.Hockaday@f160.n151.z1.fidonet.org
Message-ID: <e8a_9409061231@psybbs.durham.nc.us>
Source record: 260757

Does anyone out there have experience with wide band fm on 10 ghz with gunplexer transceivers? I have purchased a couple of Solfan units to experiment with. I also bought the UHF/microwave handbook by ARRL. Is there any other good info that I should purchase for experimentation in this area? Do any of you experienced folk out there have articles/bit of information that would be helpful as well?? My units have the "standard" 17 db horns attached. I also have a single point source that I would like to install an omni antenna on for installation at high altitude as a beacon. Tnx de WB4IUY

Well Dave, I think you might have been under a rock for the past
30 years, as I was licensed in 1972 and My Elmer was a gentlemen
who had been a ham since l951 and was the person who introduced
me to the term with the comment, I have Elmered you thru this, now
return the deed and be an Elmer to whom ever ask about and wants
to get into this great hobby, I dont know the origin, but know
the term has been around in my short 22 years as a Ham KB7UB

>Thanks,
>
>John Mcleod N6RCD.

John, it's simply to jumper the TNC-2 for 4.92 Mhz (JMP2 on the TNC-2).
Chances are good that you will not need to replace any components. The
Z80A and SIO/0 in a typical TNC-2 are rated for 4 MHz. I have changed my
1986 vintage PacComm TNC-200 and had no problems. I suggest that you
give it a try and see. If, by chance, your TNC does not work, then
replace the Z80 and SIO/0 to a higher rating (10MHz).

Greater than 2 MeV Electron Fluence for 01 SEP is: 2.5E+06

SYNOPSIS OF ACTIVITY

Solar activity continued at a low level. Several low
C-class flares were produced by Region 7773 (S08E49). Magnetic
data today indicate a bipolar configuration in this region.
There are some mixed fields in the center of the region but
they are weak. Growth appeared to have slowed or ceased and
subflare production was down from previous days. A new region

is visible in x-rays at the east limb near N15. Also, a broad area of x-ray emission is visible above the southeast limb where old Region 7765 is due on 03 Sep. A coronal hole is visible in the northeast quadrant. Last rotation, this hole was of similar shape but closer to the equator.

Solar activity forecast: solar activity should be mostly low. An isolated M-class flare from Region 7773 remains a possibility but at a reduced probability. Little is known about the regions at or near the east limb. At this time, C-class flares are expected from these locations.

Early in the period (31/2100-2400Z) the field became unsettled. Between 01/0000-0300Z active levels were observed. The remainder of the period was quiet to unsettled. The source of this brief disturbance is unknown.

Geophysical activity forecast: the geomagnetic field should be quiet to unsettled for the next three days. A recurrent coronal hole disturbance is expected to begin around 06 Sep.

Event probabilities 02 sep-04 sep

Class M 40/40/40
Class X 05/05/05
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 02 sep-04 sep

A. Middle Latitudes
Active 20/20/20
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 25/25/25
Minor Storm 10/10/10
Major-Severe Storm 01/01/01

HF propagation conditions were near-normal over all regions. A brief period of minor signal degradation affected the high latitude paths (transauroral circuits) in the early part of the UTC day between approximately 00:00 and 06:00 UTC. Conditions then improved to near-normal for the remainder of the day. Similar near-normal conditions are expected through 04 September inclusive. There remains a fair chance for SWFs on daylit circuits, although magnetic relaxation and relatively low levels of magnetic shear in Region 7773 suggest additional SWFs will be infrequent unless new flux emerges in this region. The unseen regions visible in x-ray imagery beyond the east limb may also be sources of SWFs. It is far too early to be

certain.

------ ---- ---- ---- ---- -- ------ ------ ---
31 Aug: 0709 0714 0719 C2.8 SF 7773 S07E69 III,V

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

In article <34315l$5ul@news.cc.oberlin.edu> pruth@ocvaxa.cc.oberlin.edu writes:

I'm just getting into amateur radio and waiting for my
tech license to arrive.

Welcome to the "club" Bill. I hope you have as much fun with amateur
radio as I've had. The wait may be long, but it is worthwhile.

I'm debating whether to start
out with a single-band (2M) HT or break the bank and
go twin-band (2M and 70 cm).

In my opinion, you're better off starting out on 2m and getting to
know some of the locals before making the decision to go with 70cm
(or any other band). There's a lot to hear and do on 2m. Lots of
fine people to meet, lots of community service things you can help
with, lots of discussion to learn from and (this is significant)
lots of good second hand equipment to borrow/buy/trade.

<stuff deleted>
Otherwise,
I'll be hopping aboard 2M on the cheap while Rat
Shack and others have "realistic" prices on their HTs.

The HTX-202 is a great value Bill. I own two HTs, an HTX-202 and
a fine icom dual bander. The HTX-202 goes everywhere with me. The
icom gets used when I need 70cm access or when I want to listen out
of band. I know several people that own HTX-202s and they all like
them a lot. The HTX-202 is made with a very narrow front end that
rejects out of band signals. -ALL- other contemporary radios that
I'm aware of have a broad coverage receiver that allows out-of-band
reception. They can be used as low performance scanners, but that
capability comes at the expense of succeptability to interference
from out of band signals (high power paging transmitters, for example).
The HTX-202 is also a lot more rugged than the icom. I bought the
Tandy Service Plan (TSP) for the radio just in case I get too casual
with it though. Icom doesn't offer one and I've spent over $100 in
repairs that the Shack would have covered.

Thanks, and all the best. --Bill Ruth, Oberlin, Ohio

Hmmm... I could have swore that the Repeater Directory Lists the
bandplans and suggested simplex freqs for all bands.

The "calling" freq on 440 is 446.60 simplex.

If I remember right, generally accepted simplex freqs are spaced 25 KHz
apart starting at 446.00.

And of course ending by 447.00!

3529. AMSAT/NASA Keplerian File Format

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-02 13:59:00 UTC
From: ray.hoad@drig.COM
Message-ID: <59.5851.99.0C38AE09@drig.com>
Source record: 260714

My INTERNET connection now allows 800 lines of text per message. Therefore, I have condensed the kep files down to just three files. One has the oscars and the microsats. The second has the weather and misc satellites. The third has the 2-line NASA keps per usual.

Nobody wants to get back to two files more than I do, so bare with me. I'm working on it and hope to have it worked out by the end of this year.

On another item, the NASA Orbital Information Group has informed me that they are investigating the KO-25/Object 22828 mixup in the keps. I will keep everyone posted as this develops.

73,
Ray - WA5QGD
AMSAT-NA Orbital Data Manager

3530. Received my License

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-02 14:40:33 UTC
From: kgk@nwu.edu
Message-ID: <kgk-0209940942560001@kgkmac.repoc.nwu.edu>
Source record: 260686

My license finally came yesterday, 10 weeks and 6 days. My wife, friend and father-in-laws all came in together, 8 weeks and 3 days, with consecutive numbers. We all took our tests together.

Took test June 17th, everyone (except me) had theirs processed July 22nd (5 weeks) and received it Aug 15th (3 + weeks either waiting to be mailed or in the postal system). Mine was processed Aug 25th and received Sep 1st.

I suppose the others were part of the FCC temp help taking applications from the wrong stack and the FCC must have caught their mistake when they came to mine. Oddly, last week I heard one person with an N9Z-- number. Either I misunderstood the number or some weird things are happining at the FCC office.

Oh well, it's finally here.

Regards

Ken
N9YIR

3531. ICOM Micro-2 AT

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-02 15:06:00 UTC
From: clint.bradford@ectech.com
Message-ID: <9409030136391229@ectech.com>
Source record: 260683

S>Looking for info on the ICOM Micro-2 AT handheld...
S>Anyone know how to improve receiver sensitivity,

You KNEW it had the worst Sensitivity spec of any of Icom's current
offerings when you acquired it, didn't you???

I know of no circuitry/sensitivity enhancements...what geographic area
do you live in?

3532. Radio Shack HTX 202

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-02 15:07:00 UTC
From: clint.bradford@ectech.com
Message-ID: <9409030136391230@ectech.com>
Source record: 260684

S>Anyone know what modifications are available for this radio.
S>It's an inexpensive but nice 2 meter handheld from Radio Shack.
>Does the job just fine....

Exactly! It does what it's advertised to do - and does it well!

The HTX-202 has 12 independently-programmable memory channels, plus one calling and three priority channels. It comes with continuous tone squelch encode -AND- decode. Power output is 5 watts minimum (7w typical) with 12 VDC supply, 3 watts @ 9 VDC or 2 watts @ 7.5 VDC. Low power setting provides 1 watt output. A power saver circuit with programmable 1/2, 1/4, 1/8, or 1/16-second duty cycle. Batteries are compatible with larger ICOM (IC-2AT/IC-32AT) series HTs.

Repeater offset can be adjusted from 0 to 4 MHz in steps as set by the scan frequency step selection (5, 10, 20, 25, 50 or 100 KHz). Memories store any offset, and any combination of continuous tone frequencies.

Size is 65 x 117 x 37 mm. To put this in perspective, with alkaline packs on the 202 and my ICOM W2A, both are the same thickness. The 202 is maybe 1/4-inch wider (at widest part), and 1/16-inch taller (it's hard to compare because of the irregular shapes of HTs.) The HTX-202 does give the impression of being a "mid-size" HT until viewed up against something like the little W2A, which actually has three different "widths."

Supplied with Nicad battery, charger, 6-cell alkaline battery case, antenna, wrist strap and belt clip.

Now, the good stuff...

* True FM modulation (not phase modulation) for outstanding transmit audio and best performance in packet service.
* Continuous tone squelch transmit and receive tones are independently programmable.
* In addition to DTMF dialing, there is 5-digit DTMF selective paging (DTMF squelch).
* A five-number memory dialer that stores 15-digit sequences for autopatch use or DTMF paging.
* Scan for either active -- or vacant -- channels, with programmable scanning step of 5, 10, 20, 25, 50 or 100 KHz, and upper and lower scan limits (for VFO scan.)
* FAST, 25 channels/second scanning.
* Selectable priority channel scan interval, every 4, 8, 12 or 16 seconds.

* Multi-function scanning lets you scan standard memories, priority freq. memories, or a frequency range. Resume can be after 10 seconds, when carrier drops, or remain on channel (don't resume.)
* Transmit timeout - if you frequently time-out your local repeater, this circuit will stop transmitting after a preset delay (30, 60 or 120 sec.) and sound a beep. In effect, it forces you to reset the repeater before the repeater times out. Of course you can disable the timeout circuit.
* The HTX-202 carries a 1-year parts and labor warranty.

Subjectively, this HT has exceptionally strong, un-distorted receive audio you'll really appreciate when walking around the local (noisy) hamfest. You won't believe the sound is coming from an HT! Transmit audio is crisp, clear and strong.

I put a 5/8-wave mag mount on my car, and used the 202 in the very intermod-rich downtown Ft. Worth, TX area. I've never been able to use an HT on an outside antenna within 2 miles of down-town Ft. Worth before. This one performed magnificently. My ICOM 2400 dual-band mobile gets less intermod than any other radio I've used in this environment, and the HT stayed with it, toe-to-toe. When the ICOM heard intermod, the 202 heard it, but when the ICOM was quiet, SO WAS THE HT!!!!

Even more impressive, the HTX-202 heard signals through the intermod, when the IC-2400 could not pull 'em out! Reason is probably because we purposely limited coverage to ham band ONLY! It can't be modified for out-of-band receive. The design objective was to build a specialized ham radio product that does the best possible job on the ham bands, and that includes the tightest, most intermod-free front end we could design into an HT! The published spec says intermod attenuation is 60db minimum. Spurious response and adjacent channel rejection are also 60db.

The HTX-202 is based on the ICOM 02AT with certain design modifications based on Tandy's specs. These variations include the encode/decode, additional memories, and a full width LCD display. Contrary to rumor, no part of the radio is Kenwood or Yaesu! ICOM sold the rights to their design to Tandy to do with what they would.

Whan Tandy sought to produce the unit, they went to their usual Korean source for cheap gadgetry: MAXON. Maxon then built the HTX-202 for Tandy, under license from Icom. The HTX-202 is surprisingly sturdy, and well constructed, considering that Maxon's Quality Control has, in the past, been suspect.

3533. Radio Shack HTX 202

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-02 15:07:00 UTC
From: clint.bradford@ectech.com
Message-ID: <9409030136391231@ectech.com>
Source record: 260685

(Continued from previous message)

Most HTX-202s will not take a BP-7 Icom pack. The BP-8 usually works well. If the Zener diode in the bottom-feed circuit is bad, only a 9.6-vdc pack or less will work. A minor headache at the very least.

ALWAYS: Slide off your NiCad pack when using external DC power from your vehicle or a power supply! Leaving the pack on while mobile puts too much burden on the Zener diodes, and generates heat at twice the normal rate. Save your radio and take off the pack!

Unlike it's Icom brother, the 202 will not top charge an Icom pack while on external DC power. Refer to the warning above!

WARNING: DO NOT ATTEMPT TO BOTTOM-CHARGE THE STOCK NICAD PACK IN AN ICOM BC-35 OR CLONE CHARGER.

DESIGN FLAW: Some early production (S/N 2500 and down) radios had the NiCad Zener Diode located too close to the finals, causing final transistor failure when used on external DC with the pack in place. This was remedied in production, and Tandy will remedy under warranty.

3535. Re: Can Micors/GEs be used for 220 Mhz ??

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-02 15:24:54 UTC
From: bassett@merlot.syntex.com
Message-ID: <347g46$kfv@yoda.Syntex.Com>
Source record: 260687

--

There are a number of us that have modified VHF Hi-band MICORs for use on 220. One of the repeaters I take care of is a modified MICOR. Very stable system. Required only a 220 power amp after modifiecations were complete. For all intents and purposes, the MICOR power amp can't be modified.

If you are interested, drop me a note and I'll try to dig out the modification details.

ARLP036 Propagation de KT7H

ZCZC AP50
QST de W1AW
Propagation Forecast Bulletin 36 ARLP036
From Tad Cook, KT7H
Seattle, WA September 2, 1994
To all radio amateurs

SB PROP ARL ARLP036
ARLP036 Propagation de KT7H

Solar flux is up slightly from last week, and with the A index in the single digits, disturbances remain quite low. The flux may rise to around 90 in the next few days, and then spend half of September dropping around 20 points.

Soon we will be moving into Fall propagation modes, which should show some improvement in worldwide coverage at higher frequencies. The maximum usable frequency will be limited though by the low activity as we slide toward the solar minimum.

Sharp eyed K8MLV noted that on August 9 WWV reported a solar flux of 75, while this bulletin reported 73.5 for the same date. Our Canadian source for solar data transposed some digits, and the correct value was 75.3.

The outlook for this weekend's All Asia DX Contest is fairly good, with solar flux a little higher than it has been in awhile, and no disturbances expected.

Sunspot Numbers from August 25 through 31 were 15, 18, 14, 22, 24, 45 and 59, with a mean of 28.1. 10.7 cm flux was 71, 72, 71, 71, 77.6, 83.1 and 82.3, with a mean of 75.4.

The path for this week is from Dallas, Texas to Japan.

80 meters should be open from 0900 to 1200z, and 40 meters from 0830 to 1300. 30 meters should be good around 0730 and again from 1200 to 1400. Check 20 meters around 0530 and again around 1330. 17 meters looks good from 2200 to 0200. On most days 15 meters should open around 2230 to 0000. 12 and 10 meters do not look promising at this time.

3538. pizza reflectors? or bunk?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-02 17:07:07 UTC
From: white_da@lrc.edu
Message-ID: <1994Sep2.130707.18@lrc>
Source record: 260694

This might seem a bit strange, but last night I put one
of those microwave pizzas in and nuked it for the appropriate
time. Upon removal from the microwave I noticed that the crust
was a little browner than it was before. The box sayed that the
pizza was packed on a special browning tray that to me looked
like a piece of aluminized cardboard, or heavy paper stock.
So my question is what is this little tray made out of
and just what does it do? Does it just reflect the microwaves,
in which case it really does nothing because the bottom of the
oven is going to do that or does it focus the radiation. Or does
it just get really hot and brown the crust that way? I almost
could not get to sleep last night thinking of this. Some one
please help

>are in a lot.

I'd beg to differ. There're very few forums like this one, so
globally available, where members have been able to express themselves
freely, which were available up until now.

This forum (or perhaps one which ought to be created starting in the
alt. hierchy) is a very accessible watershed for serious discussions
of the issues facing ham radio. Up until now, much of the discussion
was under control of the ARRL itself, of Wayne Green, etc.

With that come a whole new set of issues and opportunities.

>The advice "tell your Director" really is valid..... they can't
>be everywhere and hear/see/read every comment.

No, but I believe that in the realm of choices, this is an awfully
good place to be listening.

Both because it is accessible and global, and because to some extent
the internet represents the 'competition' for the Ameteur Radio
Service's personnel. I know a lot of people who would have been
hams before who are turning their interest to the Internet instead.

3541. US licences for UK amateurs??

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-02 17:58:04 UTC
From: mbxsnt@unicorn.nott.ac.uk
Message-ID: <mbxsnt-020994185333@macjm2.biochem.nottingham.ac.uk>
Source record: 260695

HI there,

I am moving to the US early next year and would like to carry on with amateur radio when I move over. I currently have a class B licence over here, and I was wondering if anyone knew what, if any, arrangements exist between the US and the UK to allow amateurs from the one country to operate in the other.

i.e. would I have to sit US exams in order to gain a US licence, or would I be eligable for a US version of my UK licence?

If anyone knows anything about this and can let me know i would be very grateful.

Thanks!

Simon (G1SNT)

I have a Santec fm-240 2 meter transceiver. It looks a lot like the KDK models. My problem is not knowing how to turn the PL on. I have the freq set to 103.5 Hz but can't make it access a local repeater. Does anyone have a clue as to how to make this thing work? I don't have the manual for it.

Thanks and 73

3543. How to open an ICOM R-1?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-02 18:30:41 UTC
From: daniel@synchrods.com
Message-ID: <9409021830.AA03148@synchrods.synchrods.com>
Source record: 260698

The phone plug that I was using with my ICOM R-1 had the bad idea of breaking inside the audio outlet. I tried to remove this tip with a pair of tweezers but no avail. I will have to open the whole receiver, so I have a few questions from people who know about this receiver:

1) I see LOTS of screws, which ones I really have to remove?
2) Do I need to remove the knobs in order to access this audio plug?
3) Is this audio outlet a sealed unit, or I can access the broken tip from the side?
4) Any other tips would be greatly appreciated.

Thanks in advance. Regards,

Dan (daniel@synchrods.com).

>>>>> some deleted for savings of BW <<<<

I get WLO all the time on 6.4160. They broadcast WX for the
Atlantic and Gulf areas, and lists of ships for which they have traffic.
Once in a while I hear one of the ships. I thought WLO sounded kind
of fast, so hooked up my Kantronics TNC in CW mode, and it gave speed
readings of 30 to 36 WPM. They use dididahdah in a way that is like
hams use BT, or maybe for CR-LF for automatic receiving machines. They
are located in Miami. Their code sounds like it sent by machine, but
the variation in speed from 30 to 36 WPM is kind of curious, on that
assumption. The ships I heard definitely were sending by hand, and
some with (IMHO) very bad fists.
Yes, there is still quite a bit of maritime CW out there. Also, the
maritime rules require ships of over 1200 tons to have CW capabilities
and to monitor the distress frequency of 500 KHz, as of my latest
commercial license question pool. Phil Emerson, AA8JO

3545. GB2RS News 4th September 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-02 18:39:37 UTC
From: dave@llondel.demon.co.uk
Message-ID: <778556377snx@llondel.demon.co.uk>
Source record: 260691
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 4th of September and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First the headlines:-

There's been more media attention on amateur radio,

The RSGB has published two membership consultation papers,

And JOTA participants should register now for an information pack.

Amateur radio has featured in the media again this week:

On the positive side, BBC Children's Television repeated the programme "Why Don't You .. ?", which included an excellent piece by Emma Constantine, 2E1BVJ, in which she describes her enjoyment of radio, both at home and at the school radio club.

But adverse publicity was provided by a story in a number of national newspapers concerning deliberate interference to an air traffic control station. The blame was attributed to an unspecified radio amateur. The RSGB responded rapidly by circulating a press release to the papers involved, expressing concern at the implied slur on all radio amateurs, and pointing out and how amateur radio differed from the hobby of listening to aircraft.

Tomorrow, the International Amateur Radio Union opens its Region 3 Conference in Singapore. The week-long conference will discuss matters of concern to amateurs in the Pacific and Oceania, but there may be implications worldwide. The RSGB is represented at the Conference.

The September edition of the RSGB's magazine Radio Communication includes two discussion papers: The first, on page 7, concerns a proposed Novice calling frequency on Top Band. The other, on page 11, concerns the possibility of a change to 12.5kHz FM channel spacing on the two metre band. It is emphasised that these papers are simply seeking input from members and they do not yet represent formal proposals. RSGB members are urged to read these papers and to respond as soon as possible.

This year's Jamboree on the Air (JOTA) will take place over the weekend, the 15th and 16th of October. The RSGB is putting together an information pack, which will include a list of known participating stations and an up-to-date list of countries permitting greetings messages. Any group involved in the event, and who would like to be sent

this pack should send an A4-size self-addressed envelope, with 38p in stamps, to Fiorina Sinapi at RSGB Headquarters, Lambda House, Cranborne Road, Potters Bar, Herts, postcode EN6 3JE.

The 23cm beacon GB3CLE will have to close down at its existing site next March. Two alternative sites have been offered. One is near Oswestry in North-West Shropshire and the other is near Newtown in Powys. The sponsors of the beacon, the Salop Amateur Radio Society, invites users to indicate their preference. Anyone who uses this beacon, and who would like a say in its future, should contact the keeper, Don Goddard, G3UQH, whose address is correct in the RSGB Call Book.

Many courses for the Radio Amateurs Examination and for Morse training are now starting. For RSGB members, lists of courses are published in the August and September editions of Radio Communication, but there are too many courses to list on GB2RS. Anyone still wanting to join an RAE or Morse course, can call RSGB Headquarters on 0707 659015 for details. Full information is available on Novice courses, too.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From the Galapagos Islands, DL1ABJ hopes to be active about now running a TS-50 and wire antennas.

From Chad, F5IXR will be operational at least until Christmas. He is presently using TT8/F5IXR but has asked for TT8XR.

And from Chagos, VQ9QM is listening on 160m on Sunday evenings.

Now the rallies we know of for today, Sunday the 4th of September:

Please note that the Preston Rally, scheduled for today, is cancelled.

The Bristol Radio Rally is being held at the Brunel Centre, Temple Meads Railway Station, Bristol. Doors open at 10.30am, or at 10.15 for disabled visitors. The event features over 40 trade stands, a bring and buy stall and an 'under 25' bring and buy stall. Refreshments will be available.

The Vange Amateur Radio Society Rally is being held at the Laindon Community Centre, Laindon High Road, Basildon, Essex, which is just a few minutes walk from the British Rail station. Doors open at 10am. The rally has the usual exhibitors. This year RSGB Morse Tests will be available on demand but candidates should remember to bring two passport-size photographs. Talk-in will be on 2 metres, channel S22.

The Telford Radio Rally is at the Telford Exhibition Centre, Telford, Shropshire which has first class facilities for disabled visitors. Doors open at 10.30am. The event features many trade stands, both large and small, also many special interest group and club stands, a flea market, Novice features and a bring and buy stall. The RSGB's Morse Test will be available on demand, subject to the usual fee and the need to bring two passport size photographs. Refreshments will be available, with a

seating area. An RSGB Bookstall and Enquiries stand will be manned by Headquarters staff supported by local Council members and RLOs. This is a good opportunity to meet your local RSGB representative.

Next the three events we know of for next Sunday, the 11th of September:

The British Amateur Radio Teledata Group (BARTG) Rally is to be held at the Sandown Exhibition Centre, Sandown Park Racecourse, Esher, Surrey. There is easy access from junction 10 of the M25, which is not far from the M3, M4 and M40 motorways. Doors open at 10.30am. The event features many exhibitors and special interest groups, covering radio, computers, peripherals, software, books, kits and test equipment, all with the emphasis on Data Communications. Refreshments will be available. For further details contact Peter, G8VXY, on 021 453 2676.

The Cranfield Amateur Radio Car Boot Sale (organised by the Milton Keynes and District Amateur Radio Society) is to be held at Cranfield Airfield, Bedfordshire. The airfield is located near the M1 Motorway. Take junction 13, if travelling from the south or 14 if arriving from the north. Doors open at 9.30am. Talk-in will be on two metres, channel S22. Further details can be obtained from Mike, G0FMC on 0908 566796.

Also the Lincoln Short Wave Club 'Hamfest' will be held at the Lincolnshire Showground and Exhibition Centre, situated some four miles north of Lincoln on the A15, Lincoln to Scunthorpe road. Doors open at 10.30am. The event features all the usual trade stands and a bring and buy stall. The site also has lots of attractions for other family members. Refreshments will be available and talk-in is on channel S22. Further details from Sue, on 0522 525431.

Now the HF contest news:

The RSGB SSB Field Day Contest finishes at 1500 UTC today, Sunday the 4th of September. Bands in use are 3.5 to 28MHz, excluding the WARC bands. Full details can be found in the June edition of RadCom.

The Worked All Europe SSB Contest takes place from 0000 next Saturday the 10th, until 2400 on the 11th. Europeans work non-europeans only and the exchange is RS and a serial number. Bands are 3.5 to 28MHz, but not the WARC bands. See August RadCom page 18 for further details.

Next some VHF contest news:

The RSGB 144MHz Trophy and Listeners Contest finishes at 1400 UTC today, Sunday the 4th. See May Radcom for details. The 4th RSGB Back Packers 144MHz Contest takes place from 1100 to 1500 UTC today, Sunday the 4th. See January Radcom for further details.

The next RSGB 24GHz Summer Cumulative Contest is next Sunday the 11th from 0900 to 2100 UTC. See April's RadCom for details.

Also on the 11th is the Worked All Britain 144MHz High Power Phone Contest. Times are 0900 to 1700 UTC and there are sections for fixed, portable, mobile and Short Wave Listener stations. Full details are

available from the WAB Contest Manager G4SKQ, whose address is correct in the RSGB Call Book, or who can be contacted via packet radio at GB7SYP.

Special event stations active this week include:

GB2EPF, which is activated today, Sunday the 4th, by members of the Grafton Radio Society at the Police Sports Ground Chigwell, Essex. Operation is on HF, VHF, packet and 24cm amateur television.

Starting next Friday, the 9th, GB2OWM will operate for 7 days from the Orkney Wireless Museum on the island of Ronaldsay, WAB area ND49. The occasion is the Fourth Orkney Science Festival.

Amongst the special event stations active next weekend, the 10th and 11th, are GX8MWA and GX5MW which will be operated by the Medway Amateur Receiving and Transmitting Society at the Strood Steam Rally, and GB2NFR operational from the North Foreland area of East Kent, commemorating the wartime radar sites operated from the area.

And now the solar factual data

The period from the 22nd to the 28th August has seen solar activity at very low levels with the geomagnetic field also at quiet levels. On the 22nd a sub-flare took place which was rated at B1.9. Sunspot numbers fell throughout the period and meaned at only 19. The solar flux remained very steady and averaged 71 units. The 90-day average flux was 78 units on the 28th. The geomagnetic Ap indices were mainly quiet, with levels down to single figures, except for the 25th which was just unsettled. The average for the period was an Ap index of 8.1 units.

The state has been 'nil nothing to report' throughout the period. The aa indices, as supplied by the British Geological Survey for the period from the 16th to the 22nd of August, were quiet. Daily indices for the period gave an average of 15.3 nanoTeslas, about K2. The very quiet day on the 19th was down to only 8.9 nanoTeslas, about K1, with periods down to only 2 nanoTeslas. The X-Ray flux levels have declined to very low, in fact the lowest level since last May, averaging only A1.04 units. The electron fluence levels fell slightly throughout the period but remained at moderate levels. They are now about two orders of magnitude lower than the disturbed periods of recent months and this should help to stabilise the HF bands. The Geomagnetic Ap average for July was 11 units, well down on previous months. The six-month smoothed level for January was 18.0 units.

I'll repeat the figures. Spots - 19; Flux - 71; Ap index - 8.1; X-ray flux - A1.04; July Geomagnetic Ap 11.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, are not complete this week due to a breakdown with the ionosonde on the 28th. For the other days, levels averaged 6.3MHz with the darkness hour

lows down to an average of 3.0MHz. Blanketing E was reported for a couple of hours on the 22nd and 27th, possibly due to sporadic E. The highs are now about 20.00 hours with the darkness hour lows about 04.00 hours.

I'll repeat the figures. Highs - 6.3MHz, Lows - 3.0MHz.

Now the ionospheric data for the north:

There is still no news about Ekaterinberg and no data is being received. We just hope that they have not closed down the ionosonde station and the RSGB is trying to contact the authorities to find the answer.

And lastly the solar forecast:

This week will see the quiet side of the sun looking our way. Solar flux levels are expected to be in the mid 70s. Geomagnetic levels are expected to be quiet at first but becoming very unsettled by the end of the week. The ionospheric seasonal changes are now beginning to be felt so the HF bands are expected to improve slowly. Ionospheric MUFs in the south are expected to reach about 21MHz during daylight hours; the darkness hours about 14MHz. Levels in the north will be down on these. North/south paths are expected to be best.

And that is the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Victor Foxtrot and G7 Tango Papa series, and Novice calls in the 2 0 Alpha India and 2 1 Delta India series.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast in the 80m, 40m, 6m and 2m bands.

3547. More Power vs. Better Antenna

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-02 20:40:08 UTC
From: Paul Antaki <pantaki@prodigy.bc.ca>
Message-ID: <3482j8$gkb@prodsql.prodigy.bc.ca>
Source record: 260704

I'm trying to make the most of a battery pack on my HT and I find that I need to transmit at high power (5 watts) to hit some repeaters I'm interested in. Someone once mentioned to me that it would be better to use a better antenna (telescopic perhaps) instead of higher power. Would someone perhaps be able to explain the relationship between the antenna gain and output power?

Many Thanks,

Paul VE7ZPA

Contests ... some non-ham friends of mine, who heard a "postcode" contest on 2 m one night, dubbed the activity as "playing taxis"! :)

I don't mind contests as long as the participants don't assume that *everyone* on the band is a contest station. I've had some experiences where contesters have broken into qso's and asked for numbers. I usually reply with a "sorry, mate, I'm not working contest" (I would be calling "cq contest", or answering such a call, if I was! :) .)

As for the dictum of using another band ... no, I don't adhere to that. If I have a trans-pacific sked, and 20 m only is open for that path, then I'll use 20 m - irrespective of the amount of contesting on the band. I work on the principle that I pay my licence fee like everyone else (right now I pay two ...), and hence I see no reason why I should use another band just because the one I want to use is carrying contest traffic.

Given the above, the proviso for using the band for non-contest ops during a contest is that there must be a *free* chunk of spectrum in which to transmit, of course. Usually this isn't too much of a problem. However, skeds on "contested" bands are often punctuated with the words "the frequency *is* in use, pal" as someone starts calling "cq contest" right over the top of you or your qso partner.

Having said all that, I'll also add that I have had fun in contests - especially on HF. I've worked call areas in contests that I've never worked again during "normal" dx activities. Contests are certainly an interesting means of determining band conditions - I've been amazed at just how well 10 m performs when it is supposed to be "dead".

But, like everything, there is an ettiquette to follow in contesting - and I strongly believe that this applies to consideration to other, non-contesting band users. Often it appears that the actions of a few inconsiderate individuals ends up queering the pitch for the majority of considerate contesters.

73's, and happy contesting / qso'ing - whatever you're doing!

Dunno about your QTH but at our public library there is a complete
copy of the FCC regs (perhaps even a complete copy of the CFR but I'm
not quite sure). Good for reference purposes anyway.

(Are you heading off up north, soon? :))

Just goes to show that if the SNR at the antenna terminals is bad, then no
amount of receiver amplification will improve it. Real-world equipment
always degrades the SNR - the measure by which it is degraded depends upon
the input noise level versus the equipment's internal noise level.

Before someone says ... "what about my DSP box" ... using DSP just means that
the threshold SNR required at the detector input in order to recover the
intelligence on the signal (to a pre-determined quality) is lower than what it
would be without using DSP. For example, dsp kit has existed for years on
multichannel fdm/fm circuits - it's called a *threshold* extender.

You have two routes open to you.

You can apply for a reciprocal permit (on FCC form 610-A). You get a permit good for 1 year (you have to reapply each year). It allows you to do anything our highest licence class allows that your own license also allows. This could be a problem if, e.g., the UK doesn't allow access to 146-148 MHz even when you're in Region 2. There's no fee. Allow 90 days for processing.

The other is to get a US license. For this you would have to take all the US exams. Once you get a US license (or US citizenship, BTW) you can't use a reciprocal permit any more. You are, of course, limited to the class of license you are able to qualify for.

One trick around this is to get your reciprocal permit and then over the year take all the exam elements OUT OF ORDER. If you don't take the first theory exam (Element 2) until you've passed enough elements to qualify for a license you can live with, you cannot possibly qualify for a license prematurely. You have one year, once you pass an element, to use it to apply for a license. Depending on your code speed, you should be able to get the top class or at worst second within a year - maybe even much sooner. Once you have all the harder elements, take the very easy Element 2 and get your license. Your reciprocal permit is good until the license actually comes.

Hope that's enlightening!

A lady called Kay Cottee sailed around the world single-handed, and she got very accustomed to talking to people only via the radio. Just before the end of her voyage the reporters sailed out to meet her off Sydney - she answered their first question, face-to-face across a few yards of water, and finished with "over".

Paul -

For all intensive purposes, 3dB of antenna gain will give you
the same ERP increase as doubling your Tx power. A good
antenna is the first and best step towards increasing your
range. Consider that with a good antenna on 440 MHz you
can easily 4x the effective output power without increasing
your true Tx power one bit.

One thing people should be aware of is the decreasing efficiency
of class C power amplifiers as the power output drops. If
you look at the power consumption of a HT between 0.5W
and 5W, there isn't a 10x reduction in battery power
consumption going to a lower output power. The ratio is
somewhere between 3 and 4x. Between 2W and 0.5W (typical
high and low power on a 7.2V pack), the output power varies
4x, but the current draw varies by 1.5:1. This is
important to know if you want to maximize power efficiency
while keeping battery current in check.

In summary, get a good antenna.

==ken

: gain and output power?

Eh? 3dB gain is nominally 2x the power. If one antenna has 3dB more
gain than another, you should be able to use it with 1/2 the power to
transmit the same signal. 6dB gain would let you use 1/4 the power.
Mathematically, dB = 10*log(P1/P2). To find the needed antenna
gain difference for two power levels, plug P1 and P2 into that formula.
Going the other way, if you know the difference in dB between the antennas,
you can get the power ratio that's equivalent as (P1/P2) = 10^(dB/10).
There's another advantage: if reception is marginal, the better antenna
should help you there, too.

Dan,

Not sure about the knobs, but the one screw you definitely need to
remove is the one where the carrying strap hole is. The other
MAJOR, MAJOR, MAJOR tip:

When you open the case, there is a SMALL spring that holds the
battery remove button. This spring will probably spring out
and be permanently lost, unless you are very careful. You lose
this screw, you will be very unhappy....

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 02/2330Z SEPTEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 02 SEPTEMBER AND FORECAST FOR 03 SEPTEMBER - 05 SEPTEMBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 90/34

GOES satellite data for 01 Sep
Daily Proton Fluence >1 MeV: 2.8E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 2.5E+06
X-ray background: B1.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
03 Sep 04 Sep 05 Sep
Activity Low to moderate Low to moderate Low to moderate
Fadeouts Possible Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 03 Sep: 92/37
COMMENT:One solar region still shows flare capability, another
previously flaring region is returning to the east limb.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 01 Sep
Learmonth 4 2111 2111
Fredericksburg 7 11
Planetary 8 11

Observed Kp for 01 Sep: 4323 1133
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
03 Sep 8 Quiet
04 Sep 8 Quiet
05 Sep 8 Quiet to unsettled
COMMENT: Recurrence suggests quiet conditions to continue until 6
Sep. Geomagnetic activity is expected to increase after this date
due to a coronal hole. This hole has contracted since its previous

rotation but activity is still expected.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Sep normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Sep normal normal fair
04 Sep normal normal fair
05 Sep normal normal fair
COMMENT: HF Comms at mid and high lats are expected to be degraded
after 6 September.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
02 Sep 27 near predicted monthly values

Predicted Monthly T-index for September: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
03 Sep 25 Near predicted monthly values
04 Sep 25 Near predicted monthly values
05 Sep 25 Near predicted monthly values
COMMENT: Spread F observed at times during local night.

I have a very large supply of Poly rings, From 10 " with a 1/2 cross section to 12 " with a 1" cross section. These rings are ideal for building caged antennas (Dipoles,Slopers, Zepps, etc..) I would like to unload these as quickly as possible so I will let them go at $4.00 per ring or Best Offer, the more you take the better I'll feel! If you need more info on the rings or about Cage antennas just drop me a note here and I will be happy to discuss it with you. If you have a FAX I can send an info sheet otherwise shoot mes a SASE and I will fire back some info.

Thanks in advance David KC4LTC

[...]
[snip]

I don't think the EMP is the deciding factor for stopping the car
in this case. There is a pretty good chance that the 8 psi overpressure wave
would blast in the car windows (assuming they are up), and the 2.7 Km fireball
would likely cause a fuss jamming traffic too. Your mileage may very, you didn't
specify the altitude of the burst, so I picked 900 feet. Altitude makes a big
difference. I recommend the remote kill switch, significantly less collateral
damage. :-)

Naw. A lot of hams have noticed that transmitting on 2 meters at say
50 Watts is enough to stall some newer cars. Its not effective on
everything,
but its reported to work well on some 8-)

Other hams have found that it works even better on their own vehicles!

I havn't heard of anyone actually stopping their cars, just their warrantees.
:-)

: V6Z 2K5
If you use more power, then you will talk our farther. Now, if ther
person you want to talk to also has lots of power, then this will work
fine since we will assume that this puts him in talk-back range.

But, if you increase power and the person you wish to talk to was very
weak, he will hear you better but you will wtill hear him weak.

On the other hand, if you put in a gain antenna, that is a bilateral
device. It has the dffect of increasing your power (called effective
radiated power), just as upping the tx output does. BUT, the incoming
signals *are also amplified by the same amount*. So, the signal that
might be weak coming in will now be stronger.

Another consideration is the amount of gain you have now vs how much you
want. For example, suppose you are seeking to double your output power.
This equals 3 dB gain. Getting this additional gain over a rubber ducky
is a piece of cake, even a simple home-made co-linear omni would do it.
But, if you already are using, say a 9dB gain omni, getting another 3dB
might then call for using a directional antenna. Maybe you don't want
this complication (i.e., you might still want to be omni). So, if you
are already at the max from your omni antenna, the best bet might be to
up the power, especially if those you talk to have higher erp than you do.

Related to the above, if you already have a directional antenna, the more
gain it has, the harder it is to get an additional 3dB. So, the antenna
gets rapidly bigger and bigger the more gain you want.

So, to sum up, if you find that your station is rather low powered
compared to those to whom you are talking, add the increase in the TX.

This equalizes the talk back. If the reverse is true, then the gain antenna might be the best bet.

Finally, this is a rather simple treatment. There are so many variables. Like, how much power (poser =weight and bulk) do you want. How big an antenna can you go with. How high is your antenna now (higher = farther line of sight).

I hope this short and rather unscientific reply gives you some food for thought.

Maurice 9V1ZS

3562. Long Haul VHF/UHF contacts

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-03 02:38:00 UTC
From: tim.marek@megasystem.com
Message-ID: <215.3637.1441.0NA7089D@megasystem.com>
Source record: 260719

Hello from Reno, NV de Tim - NC7K.

Iv'e seen quite a few messages iquiring about "Using the Moon as a passive reflector", or "Do you REALLY contact people using Meteors on VHF?", etc...

I can assure you VHF has much more than FM reapeater use in store for those who desire to be challanged. I became involved in "Weak Signal" (SSB/CW) VHF work on a whim during the 1991 ARRL June VHF Contest and have not looked back! Using a IC-211 W/10W into a 5/8 on the roof I worked over 300 Miles to central CA from a turnout above N. Lake Tahoe. It's like being a novice again!

When I got started a comprehensive guide to Weak Signal work just didn't exist but now the new comer is in luck. Two fine publications now exist to explain what and when to expect from the VHF bands.

1> "Beyond Line Of Sight" By Emil Pocock - W3EP is a great place to start! Its filled with reprints from QST going back to VHFs early beginnings to current happenings. A must read as it explains how and why certain propagation modes work.

2> "The VHF How To Book" by Joe Lynch - N6CL is a fairly complete overview of the VHF Weak Siganl modes. How and why they work. Techniques used to make long haul contacts. Sources of up to minute info, ETC...

After reading these two publications most of your VHF+ questions will have been answered. If anyone wants to duscuss in detail any "Weak Signal" mode I'd be happy to help.

My current stations are as follows...
A> Mobile IC290A driving 80W brick (amp) into a horiz Dipole 6 FT. above my passenger side rear view mirror. Worked 300 - 400 Miles on SSB/CW many many times with this set up.

B> Portable- I operate ALOT from mountain tops throughout the West. I have a complete station that used for portable work only. It consists of at least one homebrew Horiz Yagi per band (50, 144, and 432 Mhz) and one 100W Brick (Solid Sate) Amp per band. I carry at least 3 masts and 2 cables per band. I use 2 Rotors with manual backup. I carry a 650 Watts Honda AC Genorator, RV Deep Cycle Battery, and 250 Ft of extension cords just in case some AC is available. From Pond Peak Here in grid locator DM09 I have access to AC so I take a homebreww 4CX250B amp on 6 and 2 Meters running 350 Watts ea. From 8000+ feet I have typically worked out to 500 miles over very mountainous terrain and on occasion into Mexico (650 Miles) and once to Hawaii (2500+ Miles, 200+ Miles inland from the coast).

3> Home- Here I run 4 - 22FT. homebrew DJ9BV yagis on 144 Mhz EME (Moonbouce) and 750 watts from a pair of 4CX250Bs in parallell. On 50 Mhz I run a single 25 Ft 5 ele homebrew K6STI yagi at 80 Ft fed with 170+ FT. of 7/8" Heliax at 350W from the single 4CX250B. My only 432Mhz stuff at home is to work AO-13B (OSCAR 13 sattellite).

As you can tell I've really gone whole hog into VHF in a short period of time. It's just like being a Novice on 40M CW all over again, What a BLAST.

I encourage anyone who wants to dabble with "Weak Signal" modes to tune in during ARRL's Sept VHF QSO Party coming up in a couple of weeks. Even if all you have is FM, contacts over several hundred miles are still possible.

I will be QRV from 8100 FT. Pond Peak here in DM09 above Reno, NV. I will be qrv on 50.125/50.135, 144.200/144.210, and 432.100/432.110 SSB/CW and 146.55 + 446.00 FM. One thing to remember... USe of 146.52 is not allowed for contest QSOs. Other than that find a high spot and have fun!

Remember the Sept VHF QSO Party is the weekend of 9/10/94 - 9/12/94.

73's from DM09ep de Tim - NC7K ....SK

3564. Periodic Announcement - ARRL Email Information Server (info@arrl.org)

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-03 03:00:06 UTC
From: mtracy@arrl.org
Message-ID: <rec.radio.info-arrl.email.info_778561204@ve6mgs.ampr.ab.ca>
Source record: 260721
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.info

Periodic Announcement - ARRL Email Information Server (info@arrl.org)

The services that the ARRL provides via the internet include the
Email Information Server and the Technical Information Service.
The Information Server is an automated mail server that gives you
access to many of information files relating to various facets of
Amateur Radio. You can retrieve any or all of these files by
sending an email message to info@arrl.org here at ARRL HQ.
Each file you request is then mailed to you automatically.

To use it, mail messages to:

info@arrl.org

Each line of the message body should contain a command as shown below.
The subject of your message is not processed and may be omitted. You
may place as many commands in a message as you want. The files you
request will be sent to you in separate messages. Only ASCII text
files are supported.

Valid INFO commands:

reply <address> (may be needed - see below for explanation)
help
index
send FILENAME (example: send prospect.txt)
quit

In the above message example, "help" retrieves a brief set of
instructions for info, "index" retrieves a list of available files
and "send prospect.txt" retrieves a text file containing information
on becoming a radio amateur.

Note to users with FTP capability: All of these files are also
available by anonymous ftp to oak.oakland.edu in the
pub/hamradio/arrl/infoserver area. Retrieve the file index.txt
in the /league sub-directory for a complete listing of available
files.

If you want to retrieve several text files with one message, use a
separate line for each "send filename" request.

Your From: field or Reply-to: field in your header should contain a
valid Internet address, including full domain name. If your From:
field does not contain a valid Internet address, the answer will not
reach you. If this is the case, then use the reply command as shown

above. When needed, this command should always be the first command in your message.

IMPORTANT: Please use the quit command in your message. This will prevent processing errors from message signatures.

PLEASE NOTE!: This is an automated system not capable of handling written requests. Any questions on the info-server or the content of any of its files should be directed to mtracy@arrl.org.

ALSO NOTE!: Do *NOT* reply to messages sent from info@arrl.org - the reply address is redirected to keep bounced messages from endlessly looping. Write a new message to info@arrl.org instead.

The Technical Information Service gives League members on the internet better access to the knowledgeable technical staff here at ARRL HQ. Questions relating to Amateur Radio and related technical topics are welcome. To use this service, send a normal e-mail message to tis@arrl.org with your question spelled out in plain english. For best service, be as specific as possible and keep your line length in messages to a maximum of 80 characters. Due to personnel limitations, priority will be given to questions from League members.

Best Regards,

Michael Tracy, KC1SX, ARRL Technical Information Services Coordinator
(e-mail mtracy@arrl.org)

Sample of files available from INFO: (There are lots more!)

Note - If you are not yet an Amateur Radio operator retrieve the file prospect (send prospect) for information on how to easily get started in this fun hobby.

3565. Info sought: FF Systems, Rolla, MO

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-03 03:15:44 UTC
From: md@pstc3.pstc.brown.edu
Message-ID: <348pp0$ftp@cat.cis.Brown.EDU>
Source record: 260722
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

I'm looking for information regarding a company called FF Systems
in Rolla, MO. They sell a repeater controller, model FF-800,
which seems to have alot of nice features and will allow me to
easily link my 220, 440, and 1.2ghz machines.

The controller is, however, almost $1k. My concern is that I've never
seen this company advertise anywhere, nor have I seen their product
reviewed. Over the years I've been burned more than once by fly-by-nite
ham companies which appear to have a good product, but once you
actually purchase its junk and support disappears. $1k is alot of money
to take a chance with.

So, I'm curious if anyone out there has had experience with this
company, product, or has seen references to them/it in any publications.
If you have, please e-mail me at "md@pstc.brown.edu" and let me know.

MD

Cell phones can be has for $ 29.95 US, but they require a subscription to one of the cellular carriers. The more features you add the more $$$ you add :-)

Message-ID: <348uas$qfe@ixnews1.ix.netcom.com>
Source record: 260726

Try the home page of the Naval Postgraduate School ARC:

http://www.nps.navy.mil/npsarc/k6ly.html

It looks well thought out. They seem to be an active group. And
they have links to other Amateur Radio pages on the Web.

>Thanks!
>-David N9PGH

This sounds like the new trainer from MFJ

It sells for $79.95, I have seen it and it is nice!

The 3-Hr Ap Indices for 01 SEP 94 are: 21 18 8 11 4 5 12 13
Greater than 2 MeV Electron Fluence for 02 SEP is: 2.2E+06

SYNOPSIS OF ACTIVITY

Solar activity was low. Two C-class flares occurred. The
first was an optically uncorrelated C2 at 02/1652Z. The other,
also C2, was observed at the east limb (near S09) at 02/2002Z.
Region 7773 (S07E35) remains the largest and most complex group
on the visible disk but has not produced significant flares
since yesterday. A weak noise storm at 245 MHz has been in
progress for most of the day. Three Regions were numbered: 7774
(N11E47), 7775 (N14E73), and 7776 (S07E67).

Solar activity forecast: solar activity is expected to be
low to moderate. Additional C-class flares are expected. An
isolated M-class flare in Region 7773 is possible.

STD: A full-disk Yohkoh x-ray image showing two regions of enhanced
x-ray emission on the east limb, the relatively large emission
associated with Region 7773, and a coronal hole in the northeast
quadrant has been appended to this report.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 03 sep-05 sep

Class M 40/40/40
Class X 05/05/05
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 03 sep-05 sep

A. Middle Latitudes
Active 15/15/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 15/15/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
No changes are expected over the next 72 hours. There remains
a chance of an isolated SWF over daylit circuits, but otherwise
near-normal propagation should continue.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max, and end times are defined as: B = Before, U = Uncertain, A = After. All times associated with x-ray flares (ex. flares which produce associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

3574. MIR Space Station in Trouble

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-03 11:37:54 UTC
From: twright@freenet1.scri.fsu.edu
Message-ID: <349n6i$81k@freenet3.scri.fsu.edu>
Source record: 260631

I read an article in our Local Thursday News Paper that the Station MIR
was having trouble with docking to its supply ship. Anybody have any
updated news on this? I don't have the article in front of me but
the article stated that about 3 more attempts would be made at docking
before any abort or abandoning MIR would be made.

There are plenty of elected officials who do read this forum. Perhaps
a better phrasing might be: In addition to posting your thoughts and
ideas, consider CCing YOUR PARTICULAR elected officials or sending
a note calling a particular thread to their attention.

>good place to be listening.

The signal to noise ratio tends to be rather high here. I read and
participate here, but not strictly about ARRL related matters. In
fact, a majority of my USENET reading is oriented around subjects
where I make a living. Remember that ARRL officials are UNPAID
volunteers.

There are a lot of people who use BOTH amateur radio and the internet.
It would appear that you and I both fit this category. The fact that
so many spend so much time discussing amateur radio via the internet
proves that out.

I am new to Ham Radio and am unsure were to start from. I found in
Radio Shack 2 books "Now you are talking" and "No Code Plus".
I know that the 2nd has the test pool, but I was told that I need the
first one to build some background knowledge in Ham Radio and electronics.

I do not have any background in electronics other than computers so what
should I do? Get #1, #2 or both, and maybe why?

I am in the process of reading the FAQ right now but I need to solve this
question soon.

Thanks a lot.

Has any one solved the problem with a Kenwood TM-241, 2 meter rig, with a

light up on my display making it impossible to read. The radio has been back to keenwood once and had the display board replaced, but now - six months later it's back to it's old tricks -

I'd like to hear from anyone whose had this problem and has found a fix for it. Kenwood techs are at a loss to explain this.

>radios)

I asked the same question some time back. Don't remember if it ever
was really answered. I've been a ham for 35 years and only recently
heard of it (with the advent of packet and internet bulletins). It is
apparently a regional thing. It didn't exist in this area (WY/MT/CO/NE)
until packet, and didn't exist in NoCal when I was getting started.

BTW, you are correct in your definition. Generally, he is your tutor,
someone you look up to for guidance in how to participate in this
hobby call ham radio. He is also there to help you with answers to
questions you have and help train you toward upgrades.

As I have seen it used...that is.

Gary

I didn't read the original post, and maybe he is involved with
RadShack. But IMHO as a user of the '202 who *is in no way
affiliated with Radio Shack*, the '202 meets its stated design
goals of a high-quality, sturdy handheld with a very tight
front-end (and I'm quoting from one of the RadShack radio mags
on what the design goals were). It's stood up to almost a year
of daily (ab)use by me and I wouldn't trade it for any of the others
I've used so far.

Just my $0.02.

BTW, to the original poster...bad form, OM to tout your own
product like that, but make it sound as if you're unbiased.

Not to mention using usenet for a commercial...very bad form. Go
over to the biz.* heirarchy for that.

3589. Email newsletter for beginners!

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-03 23:57:02 UTC
From: rbellville@aol.com
Message-ID: <34b2ge$npn@search01.news.aol.com>
Source record: 260645

ATTENTION RADIO NEWCOMERS!

Are you interested in radio communications but don't have enough information? Do you have questions but no one to ask? Are you looking for a publication geared toward the novice radio enthusiast?

***** FIRST CONTACT *****

"First Contact" is a newly forming publication. An electronically distributed email newsletter via the Internet for the beginner. Here is a forum to get the information you're craving. Get involved in this fascinating hobby! Scanning, ham radio, shortwave listening, CB radio, General Mobile Radio System (GMRS), etc. will all be covered.

You input is essential to the success of this publication. I need to know what you want to know and what subjects you want covered in the newsletter. I will attempt to publish on a monthly basis, possible bi-weekly if there is enough interest.

The only "cost" on your part is to fill out the following subscription form completely. A classified section is being contemplated with a small fee to advertise. Hard copies will be available to those without email access. Please contact me for details.

Everyone is welcomed to subscribe whether you've never turn on a radio or whether you're an old-timer. I am looking for authors to contribute short articles on the subjects you request.

So let's get "First Contact" off to a good start! Get your radio information via email. Subscribe NOW!

Please email this and any correspondence to rbellville@aol.com or:

Rob Bellville, N1NTE
PO Box 515
Millbury, MA 01527-0515
Thanks!

---------->cut here<----------

I might add that for some of us whose newsreaders are smart enough to
decode these "on the fly" to follow the standard rules for posting them!
The narrative at the beginnning of the file this time (yes, I know that it
was an explanation of the event about to occur) caused the newsread to
assume that the whole message was text!

I don't mind this at all... and will be more than happy to transform the
message over to the way some people are used to it... and post it to the
masses on America Online.

73 for now.... c u on the shortwaves

3591. Program to study for theory tests (PC-comp.)???

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-04 01:21:13 UTC
From: Ned Raybould <eraybould@delphi.com>
Message-ID: <R09ymdJ.eraybould@delphi.com>
Source record: 260648

I am looking for a slick, up-to-date program for the PC (I have a 486DX) that can run through the question pools, keep score, provide statistics and provide help on wrong answers etc. I have seen programs like this in the past, but it has been a couple of years. I need something that has the questions from the latest pools. I would appreciate it if you would point me toward an ftp site or a land-line BBS. My wife, who at the present, does not have her license, is planning to study for her Codeless Tech-nician. I currently have my Codeless Tech and want to upgrade to at least Advanced. Last time I tried this I took all of the written up through Extra and passed (I'm an electrical engineer for the government), but the code gives me problems. This time, I'm going to at least be ready to pass the 13 WPM, and then relax for the General and Advanced theory.

Appreciate your help.

73,
Ned

X-Posting-Agent: The Moderator's Assistant V1.0 (shareware edition)

W6CYX has a 2.4Ghz machine up. It links to his 1.2Ghz repeater. 5
users... 2 mobile!, QTH is San Jose, CA.

The group has been asking if any other 2.4Ghz repeaters are QRV in the
States. We know a number of machines are up in Japan.

Any info is welcome. If your in the San Francisco - San Jose area please
stop by 1285Ghz and say hi to Bob and the group.

NOTE: The Effective Sunspot Number for 02 SEP 94 was 30.0.
The Full Kp Indices for 02 SEP 94 are: 3+ 3- 1o 1- 2- 1- 1o 1-
The 3-Hr Ap Indices for 02 SEP 94 are: 20 13 4 3 7 3 4 3
Greater than 2 MeV Electron Fluence for 03 SEP is: 2.5E+06

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7776 (S06E68) produced the
largest flare, a C6/SF at 03/1556Z. This region rotated around
the east limb yesterday. Region 7773 (S07E21) is still the
largest spot group on the disk but has not produced significant
activity.

Solar activity forecast: solar activity is expected to be
low to moderate. C-class activity is expected in Regions 7773
and 7776. An isolated M-class flare in these regions is also

possible.

STD: The last time the 10.7 cm solar radio flux reached 100 was on 03 March of this year. A full-disk Yohkoh x-ray image has been appended to this report. Another minor 245 MHz radio noise storm occurred from about 00:18 UTC to 18:36 UTC.

The geomagnetic field was quiet.

Geophysical activity forecast: the geomagnetic field is expected to be quiet becoming unsettled to active by the end of the forecast period. This disturbance is expected in response to a recurrent coronal hole.

Event probabilities 04 sep-06 sep

Class M 40/40/40
Class X 05/05/05
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 04 sep-06 sep

A. Middle Latitudes
Active 15/15/30
Minor Storm 10/10/20
Major-Severe Storm 05/05/10

B. High Latitudes
Active 15/15/30
Minor Storm 10/10/20
Major-Severe Storm 05/05/10

HF propagation conditions were near-normal over all regions. A minor SWF was associated with today's C6 flare and increased absorption on some daylit paths. Some paths may have been affected up to approximately 10 MHz. Near-normal propagation is expected to continue over the next 24 to 48 hours before effects of a recurrent coronal hole begin to erode propagation over the higher latitude paths later on 05 and 06 September. Additional SWFs are a distinct possibility with two regions now on the Sun that are capable of producing influential flare activity.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

I also went to the fires, I came up about the same time you did (wednesday). We were demobilized on Sunday after all the out of area fire fighters were demobed.

I came over with Snohomish County RACES and after we arrived we were split up. 3 of us were detailed to DNR for backup communication for the Air operations using HF. Myself and 5 others were detailed to Icicle base at the Levenworth hatchery.

Our main duties were to maintain a base and contact with staging, operations, and rahab. We were fairly busy while on 12
hour shifts. For several days we were the only link to rahab(Levenworth high school) and we did an excellent professional job. We were also backup for communications from operations to staging.

The main thing that we established there is that now emergency departments know more of what ham is and what it can do for them. After it started to cool down and we were able to converse with the big players we found that they really didn't know who or what we were and therefore didnt use us much. But with more fires and emergencies to come more of them will know us and use us.

My guess is that is a material that absorbs the microwave energy better than pizza, so it gets hotter on the bottom and browns the pizza.

PS, for fun, put a big chunk of graphite (such as a carbon arc rod) in a microwave and fire it up. Don't let your wife see you do it. I'm not responsible for the consequences. I have done it.

3601. Which is the "best" flea market?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-04 13:52:09 UTC
From: mc@shore.net
Message-ID: <34cje9$bqa@shore.shore.net>
Source record: 260657

As a ham radio flea market "junkie" I am always interested in exchanging information about good places to go. I am interested in knowing your favorites - judged from the quality of stuff, friendliness of vendors, lack of non-related junk, low prices, nice venue, etc,

My nomination is The Hosstraders Tailgate swapfest held in May and October at the Rochester NH Fairgrounds - this time is October 7th and 8th. This flea market used to be held at the Deerfield NH Fairgrounds for many years (and in fact the event is still referred to as "Deerfield") and has consistently been a great place to buy, sell and trade electronic stuff. The original Hosstraders, Norm WA1IVB, Joe K1RQG and Bob W1WGU are still running the show with all profits going to the Shriners Hospital Burns Unit in Boston. Gates open at 9:00 AM on Friday October 7th and you'll have to pay $20.00 until 3PM when the admission drops to $5.00. The festivities go on well into the wee hours with parties, music and lots of fun, stuff and socializing. There are a few great parties on site and everybody's welcome. I have attended fleas all over the country and the Hosstraders parties are without question the best. AM enthusiasts are plentiful and the dean of Yay-em, Tim WA1HLR is always in attendance. Go get there take I-95 North to Portsmouth, then the (Captain) Spaulding Turnpike (RT-16) to Exit 13 - turn right and follow the traffic to the Fairgrounds.

I'd be very interested in hearing about other hamfests, flea markets, etc that are good by the same criteria.

73 to all "stuff" junkies!

>> Who started this "Elmer" stuff, anyway? Was I just hiding under a rock
>> for the last 30 years?
>
I got my license in March, 1979 and Elmer was pretty strongly entrenched
by then. It was so much a part of my initial exposure to ham radio
that I have always assumed Elmer-ing was one of the grandest of ham
traditions. I'm surprised (disappointed?) to find out that Elmer is
such a young guy. ;-)

> with the postage, it comes out even---or am I missing something.
Yes, you are missing something...very important...

The DX station is often in a country where the postal system is worse
than ours (hard to believe, but true) *AND* the rates are still
higher! It costs almost $2.00(US) to return a QSL card from some
European countries... hardly the 29cent trivial drop you see...

Now, throw in that there may be hundreds or even thousands of requests
for a QSL card, and very quickly one can see that NOT COUNTING the
cost of producing the cards, just to return mail them is around
$200.00 per 100 cards... hardly a drop in the bucket that will even
out over time... the DX station is always receiving more requests for
cards than he would EVER send out... and so the scale is always out of
balance.

Domestically, you may be correct, but again, consider the ham in Rhode
Island, Vermont, Wyoming, Delaware etc who is rare and needed for a
WAS award... they get buried in requests for cards, and if the
response isn't worth a #10 evelope and a 29 cent return stamp (and the
time to address the envelope, then you probably won't get the card you
want because it gets too expensive for the guy on the other end...

Now, am I missing something? Probably! ;^)
73,
Jack, W4PPT/Mobile (75M SSB 2-letter WAS #1657 -- all from the mobile! ;^)

I first saw the term in the 1980 ARRL handbook ... it doesn't get used in vk
(or over here as far as I understand). Until I'd read some postings about it
recently, I'd always thought that it was an *old* amateur radio term ... of
similar ilk as "old man".

3608. Is FM 'real' amateur radio?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-04 16:37:13 UTC
From: pruth@ocvaxa.cc.oberlin.edu
Message-ID: <34ct3p$pv3@news.cc.oberlin.edu>
Source record: 260665

A philosophic question: Is FM amateur radio, particularly through repeaters, too 'easy' to be considered genuine amateur radio? IIs it necessary for a QSO to be DX to be a genuine QSO? And, ARRL and FCC pronouncements aside, what is the whole objective of getting into amateur radio? I would like to hear from the Prosecution as well as from the Defense re FM hamming, too. Thank you for your time and thoughts. --Bill Ruth, Oberlin, Ohio (waiting for license to arrive and contemplating big ham questions in the meanwhile...) Net posts rather than, or in addition to, personal replies might help clear the air (or add more fuel to the flames!)

3609. GMSR radio to 70cm?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-04 17:36:55 UTC
From: lakki@krksun.krk.fi

Source record: 260662

Hello!

I wonder have anyone tried to modify a GMRS - handie talkie to 70cm?

Are the radios for GMRS crystal controlled or what?

The price rate, abt $100 seems to be a right rate for a 1ch 70cm radio,
to monitor and operate a local repeater.

Please e-mail if you know anything!

/Erik

Fellow VHF Contesters...
NC7K - Tim
Will be QRV once again from 8100 FT. Pond Peak here in DM09 (Near Reno).
With access to 110V AC power I'm bringing the 4CX250B amp for 144 Mhz.
Stations will be as follows....
50 Mhz - FT-620B driving N4LTA 100W brick into 4 ele Homebrew K6STI
144 Mhz - TS770 Driving single 4CX250B to 350W into 12 ele NBS Yagi
432 Mhz - TS770 driving RFC 110W brick into 16 ele NBS yagi
3.818 Mhz HF for Liason. SKEDS, SKEDS, SKEDS !!!
For the Locals without CW/SSB I will have 146.55 and 446.00 FM.
I'm open to any skeds from Tropo to Random Meteors Sunday morning.
Needing 11 grids to finish 432 VUCC I'm especially looking for UHF Qs
from N.CA, UT, ID, and OR. Another goal is to finally work AZ on 2M
Tropo from here. Is anyone down that way going to be portable in the
N.W. corner of the state?
Heres to NO SNOW or WIND! HI!! 73s and CUL on the air. sk

We have a Maggiore Electronics Contoller which uses a 63P01M1 Processor
with plug in EPROM.

I have the source code for this beast and would like to compile it with some
changes we want. (We have the executable in EPROM with factory preset options)

So I am on a quest to find a PC based (read DOS) assembler for this 6301.
From the supplied listing they used 6301 Macro assembler v 4.00d.

Anyone know where I can scrounge one of these or other ideas?

Thanks, and the users of the KA5GLX/R will thank you too!

3614. A Repeater on 147.555?!?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-04 22:37:17 UTC
From: leigh@rain.org
Message-ID: <34di6t$736@rain.org>
Source record: 260670

For several years, I've used 147.555 mHz for local FM simplex with a small group of friends. Most of the time the frequency was clear of QRM.

But recently a _repeater_ with aparrently high coverage in the Los Angeles area has appeared on 147.555, and QRMs our ragchews in Santa Barbara.

This repeater uses 146.535 as an input. Both 147.555 and 146.535 are listed as FM simplex frequencies in the ARRL band plan.

This repeater's ID'er uses the callsign of W6FP.

Getting tired of the interference, I got on this repeater, and nicely complained to one of it's control operators. He was fairly courteous; he invited me to use the repeater, and apologized for the interference, but did not offer to resolve the problem.

I informed the control operator that both 146.535 and 147.555 were intended for FM simplex, under the ARRL band plan. He stated that several local ARRL Official Observers had approved the non-standard repeater frequencies.

Do the "suggested" Band Plans have any meaning any more?! What next: FM packet nodes on 144.200 or CW QSOs on repeater inputs?

Yes, all of the conventional 2 meter repeater pairs in Southern California are all used up, and repeater-to-repeater interference is common. But does every Ham have a right to have his own repeater? With our crowded, limited VHF spectrum, I believe we all should use FM simplex or SSB whenever possible.

Evidently, the local "co-ordinating" group for 2 meters in California, TASMA, is having some organizational problems, and will not currently be of much help, or so I'm informed.

Any comments or suggestions? While your area may not currently have such problems, it may soon happen, due to the tremendous popularity of the No-Code license.

Thanks for reading and 73 from Leigh/KM6JE in Santa Barbara.

I heard that they succeeded yesterday in docking. Astronauts were down to
their last 3 weeks of supplies. If the docking failed, they would have needed
to come back to earth. How (?) , I don't know.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 04/2330Z SEPTEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 04 SEPTEMBER AND FORECAST FOR 05 SEPTEMBER - 07 SEPTEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 94/40

GOES satellite data for 03 Sep
Daily Proton Fluence >1 MeV: 2.0E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 2.5E+06
X-ray background: B1.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
05 Sep 06 Sep 07 Sep
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 05 Sep: 92/37

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 03 Sep
Learmonth 8 3221 2322
Fredericksburg 5 6
Planetary 5 5

Observed Kp for 03 Sep: 2221 1111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
05 Sep 8 Quiet to unsettled
06 Sep 12 Unsettled
07 Sep 16 Active
COMMENT: IPS Geomagnetic Warning 3 was issued on 4 September and is
current for interval 7-10 September.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
04 Sep normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Sep normal normal fair
06 Sep normal normal fair
07 Sep normal fair poor
HF Comms are expected to be degraded after 6 September.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
04 Sep 33 near predicted monthly values

Predicted Monthly T-index for September: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
05 Sep 30 Near predicted monthly values
06 Sep 30 Near predicted monthly values
07 Sep 25 Near predicted monthly values
COMMENT: IPS HF Communications Warning 2 was issued on 4 September
and is current for interval 7-10 September. Spread F observed during
local night. HF comms conditions are expected to become degraded
after 6 September.

Depends on what you want to do. Sure, repeater FM may seem too routine to someone chasing rare DX under lousy propagation, but you may want to rag-chew with your friend on the other side of town while mobile. The two activities don't interfere with each other, so who cares? I myself mostly do packet, recently posted several small picture files of the comet hitting Jupiter. A teacher in France said he's going to use those picture files in his science class, thanked me for posting 'em.

I see it as: "I won't pee on your tree if you don't pee on mine.".

3619. Re: Is FM 'real' amateur radio?

Newsgroup: rec.radio.amateur.misc

Source record: 260676

Of course FM is real ham radio, we use FM on 10m and 6m and I have had many good 'DX' (out of the country) contacts on 10FM.
Yes repeaters make it 'easy', so what, we use 70cm and 2m here to coordinate lots of events, flea markets, swap fests, public service etc. Sure we could use SSB or even packet or cw, but the preponderance is cheap FM rigs. Hey I have built 3 repeaters, from old commercial rigs, think I learned some things about FM, duplexers, tuning, interfacin.. you bet. That's hamming!

Some areas of the country are building amplitude compandered repeaters, good for them! Maybe someday some one will ask if AC is 'real' radio.

Congrats on waiting for your ticket..keep asking questions.. I've been a ham for 15 years and keep finding neat stuff to do. Like co-founding the local club, teaching classes, being a VE, building repeaters and linking them.. is that 'real' hamming? The mode AND the license class just don't matter. What matters is having fun, learning, trying, experimenting.. without that there will be no amateur radio.

ALways keep the fun in ham radio! Don't waste times on politics, code vs no code, seek your level and have a blast!

3620. Ohio/Penn DX Bulletin #173

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-05 00:15:00 UTC
From: kb8nw@barf80.nshore.org
Message-ID: <$opdx.173.1994@ampr.org>
Source record: 260677
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

SB DX @ ALLBBS $OPDX.173
Ohio/Penn DX Bulletin No. 173

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 173
BID: $OPDX.173
September 5, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DX NEWS Letter, DL8ZAJ, AD1C, WB3JFS, K4CEF & Southeastern Cluster group, KF7AY, SM0TXT & DX-Loggen and JF2RZJ for the following DX information.

3D2 & 5W, FIJI AND WESTERN SAMOA. Mako, JF2RZJ, informed OPDX that his group had to change their plans for 5W-land due to a flight cancellation. The group will fly to 5W-land by way of 3D2-land (Fiji). The JA group are planning to be active from 3D2 on September 9-11th and again on the 15-17th. They will begin their 5W operation on September 11th through the 14th (instead of the 9-14th as first announced). Their 3D2 callsigns have not been issued as of yet but look for JA2FBY, JF2GYH, JF2RZJ and JH2ABL signing 5W0BY, 5W0HK, 5W0JA and 5W0BL, respectively. Activity will be on all bands, CW, SSB and RTTY. QSL to their CBA.

5X, UGANDA. Paul, WF5T, will be active as 5X1XT from November 1-31st. Activity will be on 10-80 meters CW/RTTY. QSL to his CBA.

CORRECTION! Warren, KF7AY, informed OPDX that there was a small error in OPDX.172 under "9G, Ghana". The callsign for Jim Larsen, K7GE, should be 9G5JL and not 9G5JR. The callsign 9G5JR belongs to Jack Reed, WA7LNW.

DS, SOUTH KOREA. There is a report indicating that stations in HL-land may begin using the new prefix "DS" for South Korea (HL).

FR/E, EURPOA. A couple of stations on the PacketCluster and Internet have reported working a station signing FR5HG/E lately. There were no announcements recently made in the past several weeks of a possible operation, but WFWL! This station has been heard on 7005 kHz at 0340z and 14006 kHz at 1241z.

JT, MONGOLIA. JT1CS has been very active this past week on 20 meters CW and RTTY between 1230 and 1430z. QSL to Bat Erdene, Box 125, Ulan Bator 20, Mongolia.

JUST A REMINDER (by Jeff, WB3JFS)! As summer is ending in the Northern Hemisphere, the Antarctica is getting its wakeup call from a long winter. This also means there will be more activity from the bases in the Antarctica. The best times to be looking for them would be the early morning and mid evening hours. Kab, 8J1RL, can sometimes be found on 20 meters CW between 1130 and 1400z.

OS, BELGIUM. Stations from here have begun using the "OS" prefix to celebrate the 50th anniversary of the liberation of Belgium. They will continue to use the "OS" prefix until December 31st. Also, look for special event station on September 24 and 25th. Stations mentioned are: OO50USA, OQ50USA, OR50USA and OS50USA.

PACIFIC DXPEDITIONS. Teo, DJ1RL, and Harry, DL6NA (Harry), will be active from several spots in the Pacific. Their schedule is as follows:

Hawaiian Islands - October 5-9th, they will sign KH6/DJ1RL and KH6/DL6NA while visiting AH6NB.
Nauru Islands - October 10-17th, they will sign C2/DJ1RL and C2/DL6NA.
FIJI Islands - October 17-19th, Harry, DJ1RL will sign 3D2FT.
Niue Islands - October 19-22th, they will sign ZK2/DJ1RL and ZK2/DL6NA.
Fr. Polynesia - October 22-28th, they will sign FO/DJ1RL and FO/DL6NA while visiting FO5IW.
Activity will be on the normal DX frequencies. Teo will be active mainly on CW while Harry will be active mainly on SSB. DJ1RL will be especially active on 80 meter and 160 meter (1827/1832). QSL via their homecalls or bureau. If a direct QSL is required, please remember that an Airmail Letter from DL costs 3.00 DM (that is about 1.95 US$!!!).

VQ9, CHAGOS. VQ9QM says he will begin to be active on 160 meters every Sunday evening. No specific times or frequencies were given, but last season he was on 1827 kHz and listening around 1833 kHz around the East coast sunset. VQ9TP continues to be active quite frequently on 18079 kHz between 1330 and 1430z. QSL via N5TP.

VU7, ANDAMAN ISLANDS. VU2SMN says that he will conduct an operation from the Andamans at the end of October 1994. There are no further details or info available as of yet.

OPDX MAILING LIST. Just a reminder! The OPDX Bulletin can be received via InterNet E-Mail (not Packet mail). Send an InterNet message to:
opdx-request@nshore.org
and on the "Subject:" line put the word "subscribe". No text is needed in the body of the message but if you want to write something, it is all right (I read them all!).

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send

BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to:
DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

SB SAT @ AMSAT $ANS-246.01
WISP DOWNLOAD STEPS FROM DRIG

HR AMSAT NEWS SERVICE BULLETIN 246.01 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 3, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-246.01

How To Download The AMSAT WISP MICROSAT Telemetry Program

The Dallas Remote Imaging Group (DRIG) BBS will carry the latest updates
to the WISP Microsat packet radio programs on the system. Roy Welch (W0SL)
will be uploading both the entire package and the Dynamic Link Library (DLL)
updates to DRIG as soon as the executables are available.

The WISP files will be available to all users, even brand new members who
have not yet fully registered.

To find the latest version, log on to the DRIG BBS in Dallas at:
214-394-7438

Your communications program parameters should be:
28.8Kbps to 2400 bps (1200 is too slow and not supported)

N parity
8 data bits
1 stop bit

Log on and if you are a new user, answer Yes to Register with us (if you
answer no, you will not be able to download files). Answer the requested
information (type in your own first name, last name, password, city, state,
full address, telephone, etc) for our database for any new mailings or
postings you would be interested in.

From the Main Menu, do the following:

Z WISP 7

The Z is a Zippy search to find the character string WISP

7 is the Microsat telemetry program files area

A listing of all of the WISP programs in File Areas 7 (Microsats)
will be displayed.

Picked the NEWEST one by the name WISPNEW.ZIP

Pick up only the latest changes by the name WISPUPDT.ZIP

Use Zmodem or any other binary protocol to download!

You may download the file from the Main menu by typing the
following:

D WISPNEW.ZIP (type in this WISP filename for a new complete file)
D WISPUPDT.ZIP (type in this WISP filename for the lastest updates only)

If it asks for a Protocol, the fastest is Zmodem (xmodem, ymodem, kermit,
also work o.k.)

The system will come back with a listing of files you want to download.
Just hit enter, and if you want to log off immediately after the download
is complete, simply type G for goodbye in the command line when asked.

==========

BULLET90 is the file to download for NASA 2-line Keps (updated weekly)

BULLET93 is the file to download for AMSAT style keps (updated weekly)

If you get industrious, also download the DRIG informatin file:
DRIGINFO.ZIP and DRIGLIST.ZIP which is a COMPLETE listing of all
7 gigabytes of files on the DRIG BBS! And of course, any problems, simply
enter C for Comment to Sysop and will will be glady to help you out!

AMSAT-NA Space Symposium & Annual Meeting Scheduled For 7-9 Oct '94

1994 AMSAT-NA Annual Meeting
and Space Symposium
Holiday Inn, Orlando International Airport, Florida
October 7-9, 1994

Friday, October 7, 1994
11:00 - 5:00 PM Registration - International Ballroom Entrance
1:00 - 5:00 PM Session A - Mission Status Briefings - International Ballroom
1:00 - 1:30 PM Frank Bauer: "SAREX Update '94"
1:30 - 2:00 PM Joan Freeman KD4SRD: "A SAREX Case Study"
2:00 - 2:45 PM Dennis Wingo KD4ETA: "SEDSAT1 Update SEDSAT2; Amateur
Radio in Lunar Orbit"
2:45 - 3:00 AM Break
3:00 - 3:30 PM Dan Schultz N8FGV: "Hubble Space Telescope Photographs"
3:30 - 4:00 PM Robert Diersing N5AHD: "DOVE Back On the Air"
4:00 - 4:30 PM David Liberman XE1TU: "UNAMSAT: An Operational Guide"
4:30 - 5:00 PM Philip Chien KC4YER: "Launch Opportunities Beyond Phase-3D"

Saturday, October 8, 1994
7:30 - 8:00 AM Registration - International Ballroom Entrance
8:00 - 11:45 AM Session B - Orbital Science and Systems - International
Ballroom
8:00 - 8:05 AM Bill Tynan W3XO: "Welcome & Introduction"
8:05 - 8:10 AM Al Brinkerhoff WB5PMR: "Symposium Opening Remarks & Orientation"
8:10 - 9:00 AM Prof. Robert Twiggs: "Investigating the Integrated Control of
Payloads: The Stanford SQUIRT MICRO-
Satellite Program"
9:00 - 9:30 AM Keith Pugh W5IU "Quiktrak for Windows"
by Bob McGwier N4HY
9:30 - 10:00 AM Tom Clark W3IWI: "Where Am I and What Time Is It?"
10:00 - 10:15 AM Break
10:15 - 10:45 AM Walter K. Daniel KE3HP: "Use of Star Cameras for
Attitude Determination of
Amateur Radio Satellites"
10:45 - 11:15 AM Doug Loughmiller KO5I "UoSAT: The Successful
Evolution..."
11:15 - 11:45 AM Greg Jones WD5IVD: "The TAPR/AMSAT DSP-93 Project"
with Bob Strickland N5BRG,
Robert Diersing N5AHD, and
Frank Perkins WB5IPM

11:45 - 1:00 PM Lunch Break

1:00 - 5:00 PM Session C - P3D Design Review - International Ballroom
1:00 - 1:05 PM Bill Tynan W3XO: "Phase 3D; A New Era for Amateur Satellites"
1:05 - 1:35 PM Dick Jansson WD4FABP3D "Mechanical and Thermal Design"

WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 246.03 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 3, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-246.03

Weekly OSCAR Status Reports: 27-AUG-94

AO-13: Current Transponder Operating Schedule:
M QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Jul 11 - Sep 12

Mode-B : MA 0 to MA 90 | Omnis : MA 230 to MA 30
Mode-BS : MA 90 to MA 120 |
Mode-S : MA 120 to MA 122 |<- S beacon only
Mode-S : MA 122 to MA 145 |<- S transponder; B trsp. is OFF
Mode-S : MA 145 to MA 150 |<- S beacon only
Mode-BS : MA 150 to MA 180 | Blon/Blat 180/0
Mode-B : MA 180 to MA 256 | Move to attitude 230/0, Sep 12
==========
N QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Sep 12 - Dec 19
Mode-B : MA 30 to MA 150 |<- OFF Oct 22 - Nov 07 for eclipses
Mode-B : MA 150 to MA 190 | max duration 2h 12m
Mode-BS : MA 190 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-B : MA 230 to MA 30 | Alon/Alat 230/0
Omnis : MA 250 to MA 140 | Move to attitude 180/0, Dec 19
The battery charge state is of paramount importance during the eclipse seasons. As always the command team may have to have to make temporary changes to the published schedule. In that case we will try to minimize the inconvenience, setting Mode-B OFF from MA 230-256 in the first instance.
==========
[G3RUH/DB2OS/VK5AGR]

AO-16: AO-16 is working well. [WH6I]

KO-23: KO-23 is working well. [WH6I]

KO-25: KO-25 seems again to be in one of its "deaf" modes. The BBS seems to be there but WH6I can't seem get it to respond at all and he never sees anyone in the link. [WH6I]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ N0QCU. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

>
>But does every Ham have a right to have his own repeater?

A very good question and the answer certainly must be *NO*. In fact I have to question why someone would put up a repeater in an area that is already blanketed with coverage from other machines. Unless his repeater can offer coverage that *none* of the others provide one can only guess his reason must be to feed his ego.

Some will argue for redundancy in case of a widespread emergency but if your area of coverage has a 144, a 220, and a 440 mc machine on different mountain tops the necessary redundancy is covered; why duplicate that coverage with a dozen more 2M repeaters?

And I dare say that *most* QSO's conducted on repeaters are in violation of Part 97 since they could be done via simplex at lower power than the repeater; a repeater QSO uses twice the spectrum as a simplex QSO.

I would love to see a resurgence of low power simplex utilizing high gain antennas, and use of a repeater when only simplex fails.

Space shuttle air-ground communications are rebroadcast by
WA3NAN at the Giddard Space Flight Center in Greenbelt, MD on
3860 and 7185 LSB and 14295, 21395 and 28650 USB.

During 'SAREX' missions - when hams are on board - they (the
licensed astronauts) transmit on 145.55, voice and Packet.

Beyond this, is gets a lot tougher. The principal comm link
between the shuttle and ground stations is multiplexed digital
S-Band, 2287.5 MHz. However, 296.8 and 259.7 MHz are also used
- AM mode - for backup, and during liftoff and landing. I
have, in fact, monitored direct shuttle transmissions here -
shortly after a liftoff, and, once, during an EVA.

Good luck!

For more fun, you can also microwave small fluorescent lights. (Also not responsible for any possible consequences, but I've done it too. They light up... bright.)

BTW, is it true that the higher priced microwave ovens with browners use 10GHz microwaves to do the browning? I would assume that 10GHz waves would only penetrate the outer surface of foods.

>with the postage, it comes out even---or am I missing something.

If you were working 120 QSOs or more per hour, as I was doing from
Slovenia and as many rarer DX stations do when they try to give as many
people a QSO with them as want one ... that's between $35 and $60 an hour
which can certainly add up if you spend a few evenings a week on the
radio!

I don't know too many people who could QSL 100% direct with such costs,
and work on the air more than an hour or two a week.

It is really a mistake to consider one's own experiences operating
from a non-rare spot in the States, and apply it to "rare" DX.

In addition, in many countries, overseas postal costs are a much
higher proportion of income earned than here. I forget how much it
cost to send an overseas letter in Slovenia -- it was something in the
neighborhood of 50 or 60 cents, I believe -- but the average income
there is about $300 a month, or about $75/week. Asking someone with
that salary to pay to send out 100 cards direct each week is ridiculous --
and a Slovene with a good HF signal can work 100 QSOs in an hour.

3626. Re: Kenwood TH79A

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-05 03:11:35 UTC
From: Joe_Walker@aardvark.bah.rochester.ny.us
Message-ID: <00068EEE.fc@aardvark.bah.rochester.ny.us>
Source record: 260584

I would buy the TH79A over the Icom. In my opinion Kenwood radios are built better than Icoms, and they seem to have better audio quality. However, Icom builds smaller radios than Kenwood. The 79A also has a more friendly interface.

3629. questions from a beginner

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-05 04:25:24 UTC
From: pzelicof@poly.edu
Message-ID: <Cvn2yC.M6B@poly.edu>
Source record: 260587

I'm beginning to familiarize myself with amateur radio and am interested in getting the technician's license. With this, I have several questions:

1) how is the autopatch service exactly used?
for example, I looked at the 2-meter FM Ham Transceiver sold by Radio Shack, and it says in the catalog that it has "touch-tone (DTMF) dialer and five memories for autopatch". How would one use this radio to make a phone call? And, is autopatch available almost anywhere in the US, well particularly in the Northeastern area?

2) are the Radio Shack radios any good? should I be looking at something more expensive, more powerful, and better?

3) how can I get my appointment set up to take the exam? Does the FCC have the information on the VE's or is there some amateur radio club that I need to call (in the NYC area)?

Thanks for any help, I'll probably come up with some more questions later on...

3630. RFI Free PC Computer Cabinet?

Subject: RFI Free PC Computer Cabinet?
Newsgroups: rec.radio.amateur.equipment
Organization: NETCOM On-line Communication Services (408 261-4700 guest)
Summary:
Keywords:

Over th e past several years, I have tried several different PC compatible computers in the shack in an attempt to use with my HF Station. It seems no matter with PC I have tried, and having tried toroid chookes, ac filters, etc. my PC (now a 486 /66) still QRM's the heck out of the ham hams with birdies and other annoying noise.

I know my PC is not a CLass B machine, just a clone. But over the years, I have had several clones, real IBM's, Compaqs, and AST's all with basically the same result.

Does anyone out there know of a manufacturer of a PC tower or desktop cabinet that has excellent RFI suppression and shielding? If so, would be very interested in finding this out.

Short of spending magabuck for a new class b machine, is there any other solution? My pca nd my hf station are totally useless together. What does all you guys do?

Thanks.

: and a Slovene with a good HF signal can work 100 QSOs in an hour.

: Sharon KC1YR

I think the salient word could be "Direct" It's unreasonable to
expect DX stations to pay for very expensive direct postage when cheaper
means ought to be available. Isn't this exactly what the QSL bureaux are
supposed to fix. Not all countries have bureaux, but would it not be
better to set more up and to subsidise them rather that throwing money
at post offices ?

The bureaux are never fast enough for some people, if they really
want to hurry, it's fair that they should bear all the extra costs,
perhaps the total cost. Even so, they create extra pressure and workload on
the victim, the DX station.

Perhaps a "Bureau only" expedition would be kinder than my QSL-free
one? I still think we're too hung up on pretty pieces of paper.

Cheers
David

3639. Kids in amateur radio!

Newsgroup: rec.radio.amateur.misc

Source record: 260607

This Sunday, 9/11/94, Alexis Leynes, N9KYJ, will be the special guest on the Ham Radio & More Show. Alex will discuss how kids are getting involved in amateur radio, why they become hams, what they find is the most interesting in amateur radio, and how to get more kids into this great hobby of ours! So have your kids listen to the show with you this Sunday at 6:00pm EST on the Ham Radio & More Show, heard in over 20 cities on the Talk America Network, and via TVRO satellite, Spacenet 3, Transponder 9, 6.8 audio. For more info, call 602-241-1510.
73, Len, KB7LPW

U.S. Government picks up millions of dollars on frequency sale
----

You have probably read recently about the sale of frequencies that the FCC has auctioned off to the private sector. The bids were far beyond anything the FCC has anticipated. In fact, millions of dollars over their estimates. A recent newspaper article quoted the government gain in the area of 1 (one) billion dollars. No doubt our Senators and Congressional people will be watching this action very closely. I hope you read between the lines here. If frequencies are in such demand and worth such huge amounts of money, what's next, we may wonder.

I'm concerned that maybe one day these independent sources are going to be looking at the amateur service with the thought of maybe reducing our frequency spectrum. On the other hand, what if the government should decide one day to start charging Amateurs a yearly licensing fee. A little simple mathematics here would indicate Big Brother could pick up a couple of billion dollars every year.

Oh, you're not worried! ... Okay, maybe not today but, look-out big business is just around the corner watching everyone and looking everywhere for frequencies. Besides, don't forget the recent loss in the 220 MHz band. Also keep in mind that in some countries around the world it is common to charge a yearly licensing fee t0 amateurs.

Please don't think that I'm an alarmist. My only intent is to alert you that these are important issues everyone must keep in mind. The old cliche -- Use it or lose it -- that has been applied to our frequencies so many times still holds true. At all times we must demonstrate the usefulness of our fraternity and be ever alert to any invasion thereof.

de Dale Sinner W6IWO
From the September 1994 ARDS Digital Journal editorial

Comment:

Well, as you well know, we are one of those countries where amateurs pay a yearly fee for the privilege of getting on air. The Callbook-on-disc in the copy I have says there are 19,133 registered callsigns in Australia. Let's round that up to 20,000 and see how much we pay the government for the provilege. That's only 700,000 dollars -- small bickies, don't you think?

If some commercial party threatens our frequencies, while the government is bound by international agreements to let amateurs use defined frequencies, who is to say that they may not try to milk this cow some more and put up the licence fees to make up for the fact that they really cannot legally take the frequencies away to earn large amounts of money?

A small licence fee in a small amateur population is no protection. We must be seen to be making good use of the spectrum and also to be of assistance to the community, as has been shown in recent years in earthquake, storm and fire. Keep the community side of Amateur Radio to the fore, and keep telling the public about the hobby and how it can be both enjoyment and provide service in times of need.

de Pat VK2JPA Broadcast Officer

CQ/RTTY Journal WW RTTY Contest (part 1)

September 24-25

Sponsored by CQ Magazine and ADRS RTTY/Digital Journal

NOTE: Major change in this year's rules; NO rest periods required.

CONTEST PERIODS: STARTS at 0000 UTC Saturday, and ENDS at 2400 UTC Sunday, a total of 48 hours. NO REST PERIODS REQUIRED for any entries.

Bands: 80, 40, 20, 15, and 10M. (five bands)

OPERATOR CLASSES: There is a High Power category (more than 150 watts) and a Low Power category (less than 150 watts). ONLY Single Op, All Band entries, and Multi-Op single transmitter entries are eligible to enter the High or Low Power categories. Enter one or the other, and so note in your log. Single band Assisted and Multi-multi entries are not eligible to enter these categories.

A) Single Op, All Band and Single Band. One person performs all operating and logging functions. Use of Spotting Nets, DX Alert Packet Systems, telephone, etc., is NOT permitted.

B) Single Op, Assisted, All Band Only. One person performs all operating and logging functions. However, the use of DX Spotting Nets or sny other form of DX alerting assistance IS allowed. The operator can change bands at any time. Single op stations are allowed only one transmitted signal at any given time.

C) Multi-Op, Single Transmitter. All band entry only. More than one person operates, logs, checks for dupes, use of spoting, etc.

NOTE: Only one (1) transmitter and one (1) band permitted during the same period (defined as ten (10) minutes). Once the station has begun operation on a given band, it MUST remain on that band for 10 minutes; listening time counts as operating time. EXCEPTION: One, and only one, other band may be used during the same time period if, and only if, the station worked is a new multiplier. Logs found in violation of the ten minute rule will be automatically reclassified as multi-multi to reflect their actual status.

D) Multi-Op, Multi-Transmitter. All band entry only. No limit to number of transmitters, but only one (1) signal per band permitted. All transmitters must be located within a 500 meter diameter, or within the property limits of the station licensee's address, whichever is the greater. The antennas must be physically connected by wires to the transmitter.

26 August - 1 September 1994
Issue No 35
Date of issue: 02 September 94

INDICES:

Date 26 27 28 29 30 31 01

10cm 72 71 71 78 83 82 86
A 8 8 7 4 3 6 (10 estimated)
T 26 19 25 21 28 25 24

SUMMARY OF ACTIVITY

Solar activity was moderate on 30th August, with 2 M1 flares, low on 1st Spetember, and very low for the remainder of the period.

The geomagnetic field at Learmonth (WA) was quiet 26th and 30th August, and quiet to unsettled otherwise.

Ionospheric F2 critical frequencies at Sydney were near predicted monthly values with enhancements of up to 30 per cent on 29th, and up to 50 per cent on 30th August.

FORECAST FOR THE NEXT WEEK (2 - 8 September)

SOLAR: Moderate to low (isolated fadeouts possible).

GEOMAGNETIC: Quiet to unsettled, until 6 September then increasing to active levels with possible minor storm periods during local night.

IONOSPHERIC: Near predicted monthly values, until 6 September after which degraded conditions are expected.

Courtesy of IPS Radio and Space Services, Sydney

There are no VK2SG Rtty DX Notes available for the last week in August so unfortunately we will have to wait for further information until next week. But in the meantime we have :

ARLD053 DX news

The items in this week's bulletin are courtesy of Jim, AD1C, Doc, K0HTF, Len, W7MCU, Bob, W5KNE, the QRZ DX bulletin, Chod, VP2ML, The DX Bulletin and the Yankee Clipper Contest Club PacketCluster network. Thanks.

THAILAND. Fred, K3ZO, is in Thailand until October 10 and will be signing HZ0ZAR. Check 20 meters between 1130 and 1400z. He plans to give 40 meters a try for stateside Qs. Sunrise in Bangkok is at 2307z and sunset at 1119z. Plans also call for a trip to Singapore to attend the IARU Region 3 Conference there. QSL via K3ZO.

NEPAL. Kyoko, NH6RT, is active as 9N1KY. Check 14184 kHz at 1648z and 14270 at 1700. QSL via Kyoko Yamakami, Box 3, Tokaimura, 319-11, Japan.

RWANDA. Both VE3MJQ and PA3DZN should be active any day now from Kigali. In the meantime, try working 9X5/F5PGP on 14195

kHz at about 2030z.

MONGOLIA. Members of the Japan UNICEF Ham Club should be on the air as JU1HC through the end of the month. There have been no PacketCluster spots for this one in New England as we approach bulletin time. Howe6Pr, try JT1KAA on 14021 kHz around 0210z.

UGANDA. Paul, WF5T, plans to return to Uganda and operate as 5X1XT, concentrating on CW and RTTY. QSL via his home call.

CHAGOS. Pete, VQ9TP, aka N5TP, has been busy on his favorite mode, CW. Check 18083 kHz from 1345 to 1600z. Pete operates almost exclusively between the hours of 1230 and 1630:, Tom, VQ9TT, has been worked on 14014 kHz at 1300z.

CHINA. Len, W7MCU, called ARRL Hq recently to report that BY1QH is back on Oscar 13. QSL via the 1994 CBA.

ARUBA. Contest station P40W will be rebuilt at a new location just prior to the CQWW SSB contest in October. John, W2GD, will be doing both the rebuilding and operating.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI. Email addresses for the Broadcast Officer are :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We know we reach New Zealand and many South Pacific islands, and we were reaching as far north as Japan when conditions were right. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

Hi, Herb--Boy, does your sad tale ring a bell!

I have no magic solution and can do nothing much than to commiserate with you. -- I have tried torroid chokes [they help some], an expensive AC line filter [useless], aluminum foil shielding over "open" unshielded parts of the cabinent [helps some], my pricey new Timewave DSP-59+ [nothing much, but could be operator unfamiliarity]. My last effort finally did make it at least possible to use the rig receiver and the 386/25 side-by-side and that was simply I put them each on separate house circuits. That did pay off..but, not everybody has two 120V AC circuits side-by-side. I did, fortunately, hi.

My computerguy tells me there are specially-available, hurky RF shielded cabinents available..some even second-hand. The downside is he never looked very hard and so I still have the same old cabinent.

BTW, regarding the aluminum foil, my computerguy #2 sez there should be no problem with a 386 and covering miscellaneous holes in the computer cabinent; however, he cautions covering too much with the 486 because of the chip's greater cooling and air flow requirements. GL!

Steve,

I have been using an ICOM IC737 for about six months now as my only HF rig. I am delighted! The receiver is very good indeed and I have also received consistently good reports about my audio quality etc. I run the rig barefoot into a Cushcraft R5 vertical antenna and I am really impressed! After I installed it my first QSO was with VP8CPC in the Falkland Islands and I have since worked all over the place. I have been sucessful getting through some DX pileups mainly (I believe) due to the excellent speech compressor - although technique helps!.

I like the keyer and use it all the time for CW with a Kent paddle. I use the ICOM SP8 desk mic although the supplied fist mike is also very good.

What would I change? I would like to see an RF gain control and I would also like to have some kind of deviation control for FM but apart from that I think it's great! I didn't bother with the IC737A 'cos I would never use VOX anyway. I did buy the external speaker as the little one built-in IS a little tinny. I also invested in an ICOM Xtal filter for CW.

I also use the rig for digital communications and built a cable to attach between the 8 pin DIN on the back and my KAM Plus TNC. No problems on RTTY, AMTOR, PACTOR or HF-Packet. If you want to control the rig from a PC don't spend money on the ICOM level converter ... buy one of Ramsey Electronics cables for $50 and use that - it's what I did!

There was a review of the iC737 in one of QST / CQ or 73 earlier this year if you need a different view.

In short, *I* like it but have nothing to compare it with as it replaced some very old Sommerkamp separates! It's easy to use and very intuitive to operate. The manual is clear but you won't need to look at it too often.

Hope this helps! 73 de

2-meters is crowded, but what about other bands? It's "use it or lose
it", and most of them aren't being used. The big question is how to
get hams to migrate to other VHF/UHF bands. I no longer bring along
the dual-band HT due to the lack of activity on 440. 220 is pretty
well dead, and how many people have even seen a radio for 1.2 gig or a
higher band?

: : here, and I was wondering if anyone knew what, if any, arrangements exist
: : between the US and the UK to allow amateurs from the one country to operate
: : in the other.

: : i.e. would I have to sit US exams in order to gain a US licence, or would I
: : be eligable for a US version of my UK licence?

Doesn't a UK class B equate to the no code technican in the U.S.?

G8VUK came over here about four or five years ago and operated with
a reciporcal permit issued by the FCC (no testing, just apply, on)
on an FCC Form 610A); he was authorized as W3/G8VUK. In the space
of about six months he went from a holder of a class B UK license to
the American Extra Class. Wth the Extra Class in hand, he found out
that the UK licensing officials would grant him a class A, G0 call
with no testing.

He's still living in Maryland, if you're coming to the east
coast, might want to ring him up and further chat with him on
the subject. His U.S. call is N3KIP.

ID>Hello.

ID>I've read a lot of EMI/RFI hazard stuff and now I'm even
ID>more confused as to whether I'm going to die from radiation
ID>or not...

ID>Let me get a straight forward answer, in plain, direct English
ID>if MY particular ham set up will eventually kill me:

ID>I'm running a TS850 (100 W) with the rig placed approximately
ID>3 ft from my body. I sometimes use my Clipperton L amplifier
ID>which pumps out about the legal limit...this is placed five
ID>feet from my body. I use an OPEN balanced antenna tuner
ID>which uses two roller inductors and three very large capacitors;
ID>this and some of the prefab ladder line is nine feet away from
ID>my body. I mainly do SSB on 40/20/17 meters.

ID>Thanks,

ID>Marc D

in plain words: NO...I have been a radio for years, working on
everything from live-plugged-in T.V's to 12.5 Gig Microwave dishs, and
have suffered little to no radation (sp?) from most systems under 200
watts of power. Mind you now, the higher the freq. (above 440/ 70 cm.)
the lower the wavelength......which means don't put you arm in front of
a microwave repeater putting out 1 Kw.!!!!, but stuff in 40/20/17 meters
are safer than my cordless phone. Just use good coax/hardlead and try
for a nice,high ant.

>>No-Code license.

My sediments exactly. I finally decided to get a 2M/70cm rig to
prepare for the inevitable migration to non-2M VHF/UHF bands due
to sheer numbers in a limited bandspace. Why so much activity
has to center on 2M is a mystery. Could it be that equip. manu-
facturers have influenced this disparity by making more 2M equipt.
and at affordable prices (e.g. HTX-202 being @ 50 bucks cheaper
than its 70cm sister HTX-404)? As one waiting for his no-code
ticket to arrive, I feel I'm adding to the torrent of new hams
cascading into VHF like the Johnstown Flood--I'll graciously
flow into 70 cm and lessen the strain on the hapless denizens
of the Johnstown of 2M. Isn't the pioneering spirit the essence
of Amateur Radio--the courage to leave the crowded Eastern Seaboard
of HF and 2M and head for the frontiers of UHF and weak-signal
VHF? --Bill Ruth of the North Coast, where there's still plenty
of room, even on 2M--but not for too much longer...

>the PL is always on.

Is KDK what replaced Santec? I have an old Santec handheld, and have been wondering how to get ahold of Santec. Someone told me they had changed names and moved to Plano, TX, but the directory assistance operator there couldn't find the name I had been given.

I haven't tried this yet, but a friend of mine was telling me about a conductive spray that you can buy, that you can spray over all of the insides of the plastic parts, case etc. (alot of cases have a plastic front panel) to provide a somewhat better sheilded cabinet. Working on an IBM PS/70 recently I noticed that this is what IBM has done to provide a better RF shield. If I understand my physics correctly, and I've had some, theoretically, nothing can radiate if it is boxed up tight...but that is the word..."tight". Just to note, IBM even has a plate that goes between the motherboard and the case- around the built-in video and serial parallel ports which has alot of "fingers" or spring loaded strips of metal that provide a good electriacal contact along the plate surface to the case. This might provide an idea or two. You could experiment even with tinfoil if you are careful but don't forget to provide some way for the thing to ventalate well. You might also check out your monitor as well.

Many of the cheaper monitors have _Alot_ of stray electromagetic fields as well which amy be contributing to the problem..(example- my dad purchased a cheap VGA monitor and because of his application, had to place it next to his IBM 8513 (VGA) monitor. The stray fields from it would mess up the picture on his IBM monitor- even several inches away...on the other hand, when that monitor finally died he purchased a NEC 4FG and places it _NEXT_ to it now and has _NO_ problem...just a thought. Good luck and have fun experimenting.

The 3-Hr Ap Indices for 03 SEP 94 are: 7 9 9 5 4 5 4 5
Greater than 2 MeV Electron Fluence for 04 SEP is: 2.3E+06

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7776 (S08E56) produced
a few subflares. The largest was a B6/SF at 04/0605Z. Region
7773 (S08E07) has simplified somewhat. It remains the largest
Region on the disk but has been relatively quiet.

Solar activity forecast: solar activity is expected to be
low. C-flares are possible. There is an outside chance of an
M-class flare in either Region 7773 or 7776.

The geomagnetic field was quiet.

Geophysical activity forecast: the geomagnetic field is
expected to become active by the end of the three-day forecast
period due to a coronal hole.

Event probabilities 05 sep-07 sep

Class M 20/20/20
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 05 sep-07 sep

A. Middle Latitudes
Active 20/30/30
Minor Storm 10/20/20
Major-Severe Storm 05/10/10

B. High Latitudes
Active 20/30/30
Minor Storm 15/20/20
Major-Severe Storm 05/10/10

HF propagation conditions were near-normal over all
regions today. A gradual deterioration in propagation is
expected over the next 72 hours, beginning first over the high
latitude regions and then working equatorward over time. Minor
signal degradation is expected to accompany this activity,
particularly on transauroral night-crossing circuits. Increased
levels of fading, periods of enhanced absorption, and greater
multipathing is expected. MUFs may also deteriorate slightly
during this unsettled period.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

|> A very good question and the answer certainly must be *NO*.

I know this will start a large debate (at least it looks like it might),
but I have to ask why does "the answer certainly must be *NO*"? I
agree that most repeater QSOs could be used on simplex at lower power,
and thus, technically, they are breaking the law. But, how does this
make it so each ham does not have a right to have his own repeater?

I would say they probably do have the right, but that exercising it is
not in the best interests of the ham community at large. I see nothing
in Part 97 to say every ham *can't* have his (or her) own repeater.
Please enlighten me and the group on your thinking.

3657. Re: A Repeater on 147.555?!?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-05 19:02:15 UTC
From: brian@nothing.ucsd.edu
Message-ID: <34fpvn$5qm@network.ucsd.edu>
Source record: 260614

From far away in San Diego, the story we get is:

In Los Angeles, all the repeater frequencies are in use. Because of that, there's no hurry in the various coordinating bodies to tell people who apply that they can't be allocated a frequency that won't interfere with existing operations, and that they've been placed on a waiting list.

Because of this perceived inaction, various groups of people have "formed their own coordinating bodies", some as restricted in scope as to assert their authority to coordinate all repeaters in, say, one small city on the outskirts of Los Angeles.

Of course, the radio waves don't know how to observe these restrictions, so there are still problems with coverage v. interference.

Some of these groups apparently have the blessing of local officials of one kind or another - police chiefs, emergency services people, and officers of various clubs and organizations.

Despite these imprimatures, the radio waves still tend to follow their own nature, and there are still problems with coverage v. interference.

So now the situation is that there are a few widely-recognized coordinating bodies (one per band), and several much-less-recognized ones. Some of the latter are assigning bizarre frequency coordinations, and chaos nears.

And there are still problems with coverage v. interference.

Sure am glad I'm not a frequency coordinator anymore.
- Brian

If the UK will grant licenses without testing to US Amateur Extra Class
licensees, this does not mean the FCC will do the opposite. SOmeone
could ask the FCC, but I don't think it will.

>watts of power.

How do you know you have suffered little to no radiation? You certainly
don't feel it or taste it or smell it. And what works for you might not
work for others: There are some people who have smoked several packs
of cigarettes per day for most their lives yet for some unknown reason
never develope cancer - but that's certainly not an argument *for* smoking.

Recall the true story I posted on here a while back concerning a ham
who worked on a 2M amp with the cover open for a couple hours - the
next morning he woke up blind. He said while working on the amp
he felt *nothing* - no heat, no pain, no discomfort. This story
was originally passed over the QRP email group from an M.D.
conducting research on the subject.

It's the cummulative exposure one should be concerned about.

3660. Question on 2400 mod

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-05 19:29:35 UTC
From: dave@flowserver.stem.com
Message-ID: <9409051924.AA24409@flowserver.stem.com>
Source record: 260617

Greetings! I have recently revived a tr2400 2m HT. It has not
had the out-of-band receive mod performed, but I am planning
on doing this. However, the display only shows the last four digits
of the frequency (x.xxx) and only allows entry of the last four digits.
Will the mod change things so that the entire frequency can be keyed in
or what?

: I have a borrowed Santec 240 WITHOUT the manual. I've found the "enter"
: key and such. My question is, does this rig have transmit "PL" capability
: or just receive "tone-squelch" type stuff? The problem is , I need a xcvr
: with transmit PL on 103.5 for some repeaters, but, I can't seem to toggle
: the PL on here using the "enter" key that lets me select the actual PL freq.

: Did I make myself clear here? In a nutshell, does the Santec 240 have a
: way to turn the TRANSMIT PL on?

: Thanks, and 73 de A.C., W5EZM in Houston

I FINGERED it out. IF you go to the "memory" switch position, use the
enter key to select "tone" and turn the freq knob clockwise until the PL
tone reaches the one you want, THEN the PL is on all of the time on THAT
channel. Turning the freq knob counter-clockwise until it hits zero turns
the PL off.

Now if I could JUST know exactly what freqs are needed around here!

Thanks for all previous suggestions and 73 de A.C. in Houston

600,000 hams each with their own repeater would use 1.2 million
frequency channels, not counting the frequencies needed for control.
They would be using three times the needed spectrum and certainly more
power than needed to carry out their desired QSO.

3665. IPS Daily Report - 05 September 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-05 23:08:22 UTC
From: rwc@flare.syd.ips.oz.au
Message-ID: <1994Sep5.230822.21522@ips.oz.au>
Source record: 260622
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z SEPTEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 05 SEPTEMBER AND FORECAST FOR 06 SEPTEMBER - 08 SEPTEMBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 94/40

GOES satellite data for 04 Sep
Daily Proton Fluence >1 MeV: 2.7E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.3E+06
X-ray background: B1.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 Sep 07 Sep 08 Sep
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 06 Sep: 92/37

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 04 Sep
Learmonth 13 3333 3322
Fredericksburg 10 3
Planetary 10 4

Observed Kp for 04 Sep: 2111 1212
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 Sep 12 Unsettled
07 Sep 16 Unsettled to active
08 Sep 25 Active
COMMENT: IPS Geomagnetic Warning 3 was issued on 4 September and is
current for interval 7-10 September. Active levels, with minor storm
periods during local night expected 7-10 September due to coronal
hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Sep normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Sep normal normal fair
07 Sep normal fair poor
08 Sep fair poor poor
HF Comms are expected to be degraded after 6 September.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
05 Sep 33 near predicted monthly values

Predicted Monthly T-index for September: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
06 Sep 30 Near predicted monthly values
07 Sep 25 Near predicted monthly values
08 Sep 15 10 to 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 2 was issued on 4 September
and is current for interval 7-10 September. HF comms conditions are
expected to become degraded after 6 September.

3666. Questions about TV Twin-lead J-Pole

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-05 23:39:56 UTC
From: Paul Antaki <pantaki@prodigy.bc.ca>
Message-ID: <34ga8c$7v3@prodsql.prodigy.bc.ca>
Source record: 260623

I recently posted a requested for instructions one building a TV Twin-lead J-pole antenna. I received many helpful responses that included plans for an antenna by Ed Humphries. I;ve been trying to build this antenna and I keep messing something up so that the results I get are no better than my standard HT antenna. I was hoping that someone might have some ideas as to what I may be doing wrong. Here are some of the problems I've encountered:

-The TV twin-lead does not lay completely flat so it's difficuly to measure (i.e. there's some curvature). How should it be measured?
-Does the exact location of the feedpoint for the coax make a significant difference?
-Will the length of the coax used to feed the antenna make a signification difference?
-I'm using an RG-58U cable with a large connector at one end to which I attach a BNC adaptor. Will this make a difference?
-Is there any way to measure the efficiency of the antenna without using a SWR meter? The only meter I have access to is a Radio Shack meter than measures HF only. It's readings seem to be quite a bit off.

Any assistance would greatly be aprpeciated.

Paul

|> frequency channels, not counting the frequencies needed for control.
|> They would be using three times the needed spectrum and certainly more
|> power than needed to carry out their desired QSO.

OK, but does this mean that a ham who wants to put up a repeater does
not have the right to do so? Most hams won't because of the expense
involved, and many also don't care about repeaters, but I don't see why
they don't have the *right* to do so. It might not be practical,
or even feasible, but I don't think this means they don't have the
right.

Having the right and exercising it are different things.

|>
|> I'm beginning to familiarize myself with amateur radio and am interested in
|> getting the technician's license. With this, I have several questions:

Welcome to amateur radio! I hope you get all the information you are
looking for, and then join this wonderful hobby.

|> 1) how is the autopatch service exactly used?
|> for example, I looked at the 2-meter FM Ham Transceiver sold by Radio Shack,
|> and it says in the catalog that it has "touch-tone (DTMF) dialer and five
|> memories for autopatch". How would one use this radio to make a phone call?
|> And, is autopatch available almost anywhere in the US, well particularly in
|> the Northeastern area?

Some repeaters are connected to phone lines. By transmitting a certain
DTMF code to the repeater, a ham can access the autopatch and make phone
calls the same as from a touch-tone phone. (Of course, you have to let
go of the PTT to listen to the other side of the conversation. :-)

|> 2) are the Radio Shack radios any good? should I be looking at something
|> more expensive, more powerful, and better?

The HTX-202 radios are very good 2 meter HTs. They don't receive out of
band, but then they also don't have many of the intermod problems common
to wide-band radios. If you're looking for a 2-meter only HT for not
too much money, the HTX-202 is a good radio.

|> 3) how can I get my appointment set up to take the exam? Does the FCC have
|> the information on the VE's or is there some amateur radio club that I need
|> to call (in the NYC area)?

Your best bet is to contact a club in your area, or a ham in your area.
You can also contact the ARRL and find out when an ARRL-sponsored VE
testing session is in your area. (Sorry, but I don't have any info on
the NYC area in particular.)

3669. CW Exam Requirement in Different Countries

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-06 01:06:18 UTC
From: ys@isr.harvard.edu
Message-ID: <34gfaa$adq@scunix2.harvard.edu>
Source record: 260626

I am interested in CW exam requirement in different countries.
I will be very grateful if anyone can let me know the following
information about whatever the country he/she is familiar with:

I posted this article in rec.radio.amateur.policy, but received
information only for Canada, Sweden, and Bhutan, so I am posting
it again in this group.

(1) Code speed requirement for different license classes:

I am particularly interested in the code speed
required for the highest class such as 20 WPM for Extra
Class in the U.S.

(2) Type of text for code exam:

Such as simulated QSO, plain text, random characters, etc.

(3) Grading criteria:

Such as one-minuted solid copy, seven out of 10 multiple-choice
type questions, seven out of 10 fill-in-the-blank type questions,
85 percent correct copy, etc.

(4) Sending test requirement:

Whether sending test is usually required or not.

(5) Requirement of Morse code for other language:

In the U.S. and many other countries, there is no such
requirement. In Japan, however, for the first class amateur
radio license, Japanese Morse code for 10 WPM is required in
addition to International Morse code for 12 WPM. Japanese Morse
code consists of 51 symbols.

I am trying to make a comparison of CW exam requirements among
different countries, and will appreciate any information you might
have. Please send your reply to me directly.

Why must it by "my" repeater? What's wrong with talking on "somebody
else's" repeater? Most of them are idle most of the time anyway.

The only place I'd like to see more repeaters are on less-used bands
to entice more people to use something besides 2 meters.

I agree with you, Bill. There isn't a rule (that I know of) that
prohibits a ham from constructing a repeater, coordinated or not.

One thing I might add is that most of the current 2M users would think of their radios as useless if all repeaters were to suddenly go QRT. It's a shame to be dependent upon someone else's radio (i.e., The Repeater) in order to value your own.

In a past repeater debate over on .policy someone mentioned he'd bought a dual-band HT; when he found no open repeaters on 440 he said he returned the HT for a 2M-only radio. How sad.

Jeff NH6IL

3673. Re: A Repeater on 147.555?!?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-06 03:01:41 UTC
From: jtomason@li.net
Message-ID: <34gm2l$ckg@linet02.li.net>
Source record: 260380

In article <34di6t$736@rain.org>, leigh@rain.org (Leigh) says:

>I informed the control operator that both 146.535 and 147.555 were intended
>for FM simplex, under the ARRL band plan. He stated that several local ARRL
>Official Observers had approved the non-standard repeater frequencies.

ARRL OO's have one function: To help amateurs understand and follow the FCC rules. They can, in
extreme cases of non-compliance, take the matter to the FCC for enforcement, but they are not,
I repeat, NOT the FCC. Their acceptance of an operation should by no means be construed to be a legal
precedant or "official" interpretation of the rules. And you can check THAT with the ARRL.

>Do the "suggested" Band Plans have any meaning any more?! What next: FM
>packet nodes on 144.200 or CW QSOs on repeater inputs?

You'll have to do some digging to find it (perhaps the ARRL Regulatory Info group can assist), but I
remember reading a decision from the FCC stating that amateurs operating out of the ARRL Band Plan were
not operating in accordance with "Good Amateur Practice" -- which is in violation of the Rules. I would
also argue that if the simplex operations on the frequency were regular and numerous, that the repeater
owner would be in violation of good amateur practice again in causing malicious interferance by not
considering the estabiliahed use of the frequency. While he may argue that "no one owns a frequency", he
in effect does now, since no one else can use it for the pupose it had been in use for.

The FCC decision came due to the fact that the ARRL Band Plan had met with significant acceptance in the
ham community and since no one else had come up with one!

>Yes, all of the conventional 2 meter repeater pairs in Southern California
>are all used up, and repeater-to-repeater interference is common. But does
>every Ham have a right to have his own repeater? With our crowded,
>limited VHF spectrum, I believe we all should use FM simplex or SSB
>whenever possible.

Yes, every ham has a right to a repeater, as well as anything else his/her license priviledges convey.
However, if there are no pairs available, there are no pairs available, and then the coordination issues
come into play.

>Evidently, the local "co-ordinating" group for 2 meters in California, TASMA,
>is having some organizational problems, and will not currently be of much
>help, or so I'm informed.

Same here in NYC area. Problem always seems to be that repeater owners have friends.. Or themselves.. on
the board...

-> Hi John: Glad to see the board back up! I was also having problems on
-> VE3KYT but I guess you know about that. I was getting screenfuls of
-> garble and it is the first time I have ever had a BBS crash my comms
-> software!
-> A query about TakeOne....I think I owe you some money..how much?
-> A query about VE3KYT...it seems people receiving my messages get garb
-> and lines that go right off the right-hand edge of the screen. Is the
-> some terminal emulation and line length that I should be selecting
-> somewhere from a menu? I couldnt find it.
->
-> Thanks and 73,
-> Rob, VE3YE

Hi Rob

The weekend was spent trying it install a network here between three computers. This is the first time I have ever done this and it did not go as well as I had hoped. The main network software is in and running but not all of the programs I run here want to play. So we had to put the BBS here back to running alone. It's just a memory problem which I'm sure will be sorted out this week.

Your first query can be answered by reading bulletin number 6. As for the second one, your line length should be set for 79. I think the lines are set for 256 in the BBS software. That maybe why some messages have the lines running off the end of the page. I just try to remember to hit the return key after 65 or 70 characters. As you can see the VE3KYT BBS is not as elegent as the TakeOne BBS but it serves its purpose very well. Just can't bring myself to taking off the air. So many Hams without TNC's find it the only way to get into the Amateur Packet network.

73 de John, VA3CR/VE3KYT

3675. Roof mounted antenna

I'm a HAM wanna-be (currently studying for the exam). Wondering about the pros and cons of a roof mounted antenna system for 2 meters. Seems an antenna on top of a 2 story house would be fairly effective. Are there any particulars (grounding, wind, etc) of which I should be extra careful? Thanks for the help!

The 3-Hr Ap Indices for 04 SEP 94 are not available.
Greater than 2 MeV Electron Fluence for 05 SEP is: 2.5E+06

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7773 (S09W05) produced the
largest flare, a C6/1F at 05/0538Z. This region has reduced
spot area but increased magnetic complexity since yesterday.
Region 7776 (S08E23) has been relatively quiet. New Region 7777
(S14W22) was numbered.

Solar activity forecast: solar activity is expected to be
low. There is still a chance of an isolated M-class flare in
Region 7773 or 7776.

STD: A 245 MHz radio noise storm was observed from 02:15 UTC to about 09:27 UTC. Another full-disk Yohkoh x-ray image has been appended to this report showing the location of the coronal hole and the relatively strong emissions from Regions 7773 and 7776.

The geomagnetic field was quiet to unsettled at most locations. Active to minor storm periods were observed at some high latitude stations.

Geophysical activity forecast: the geomagnetic field is expected to be active within the next 48 hours in response to a coronal hole.

Event probabilities 06 sep-08 sep

Class M 20/20/20
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 06 sep-08 sep

A. Middle Latitudes
Active 20/30/30
Minor Storm 10/20/20
Major-Severe Storm 05/10/10

B. High Latitudes
Active 20/30/30
Minor Storm 15/20/20
Major-Severe Storm 05/10/10

HF propagation conditions were normal over all regions. Minor signal degradation is expected to begin perturbing high-latitude paths (particularly transauroral circuits) over the next 2 to 3 days. Conditions may also gradually deteriorate for middle latitude paths, although in general only minor signal degradation is expected.

REGION FLARE STATISTICS FOR THE PREVIOUS UTC DAY

C M X S 1 2 3 4 Total (%)
-- -- -- -- -- -- -- -- --- ------
Region 7773: 0 0 0 1 0 0 0 0 001 (14.3)
Region 7776: 0 0 0 2 0 0 0 0 002 (28.6)
Uncorrellated: 0 0 0 0 0 0 0 0 004 (57.1)

Total Events: 007 optical and x-ray.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
04 Sep: 0558 0605 0616 B6.3 SF 7776 S08E71 III
2059 2103 2106 B1.4 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,

and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

SPECIAL INSERT: YOHKOH FULL-DISK X-RAY IMAGE
---

I was just down at the San Diego hamfest and closely looked at all of the dual band HT's. I decided that the 79a was by far and away superior, IMHO, and proudly purcased one.

Excellent HT, you will be very pleased with it.

I did see a posting quite some time ago, lost it somehow, where
someone said that after he had sprayed his monitor case and attached
it to chassis, his problems remained the same. He then tried ferrite
beads/clamp around various wires going to the monitor and indeed
found that one of the wires going to a potentiometer on the front
panel was the culprit.
I am experiencing the same problems with a new SVGA monitor, the old
VGA was much quieter, so I will be trying the spray and the ferrite clamp
treatment to see what works.

HAMFEST/COMPUTERFEST CALENDAR 1994 - NORTHERN ILLINOIS
last updated July 26, 1994 |

o Please report additions or changes to Bob Parnass,
AJ9S, office phone: (708)979-5414, electronic
mail: parnass@ihlpf.att.com.

SEPTEMBER *

September 11, Sunday: Joliet, IL - Bolingbrook ARS
Ham/Computerfest, Inwood Recreation Center, 3000 W.
Jefferson. This is a medium size hamfest with
indoor/outdoor flea market. Gates open 8 AM for gen-
eral public. Outdoor flea market on paved lot -- setup
at 6 AM. Use Exit 253 from I55, or Exits 126/130 from
I80. Admission $5. VE testing 9 AM - 12 noon. Bring
original license and photocopy, ID and photo ID, plus
$5.75 test fee. Novice-only tests are free. Talk-in
147.33, 224.54, and 443.525 MHz repeaters. Indoor
table reservation, call Ed Weinstein at 708-085-0527.
Info, BARS Hotline (708)759-7005 between 6 AM and 9 PM. |

September 11, Sunday: Chicago, IL - Vintage Audio Fair |
The Vintage Audio Fair, organized by the Chicago Vin- |
tage Audio Society will be held on 11 Sep 1994 at |
Irish-American Heritage Center, 4220 N. Knox, Chicago, |
IL (vicinity of I94-Edens Expwy and Wilson Ave). We |
expect about 30 exhibitors and 300-500 people attend- |
ing. Admission is $5.00, table - $75.00. For more info |
call: days: 312-545-2641, nights: 312-338-1042. Mail |
your inquiry to: 5308 W. Lawrence, Chicago, IL 60630. |
The show is for all MacInstosh - Marantz freaks, tube |
maniacs, audiophiles, musicians, aficionados and all |
alike!

September 17-18, Saturday & Sunday: Peoria, IL - Super-
fest. Admission $5. For more info call (309)685-6698.
Talk in on 146.76 (-600 kHz offset).

September 24-25, Saturday & Sunday: Grayslake, IL -
Chicago FM Club, Ham Radio Expo. This is a large ham-
fest with indoor and outdoor flea markets. Lake County
Fairgrounds, Rts 45 & 120. 6AM - 6PM. Info 146.76 MHz
(-600). Admission $6 at gate, one ticket good for 2
days. Kids under 12 free.

OCTOBER

October 23, Sunday: Waukesha, WI - Kettle Moraine Ham-
fest Sponsor: Kettle Moraine Radio Amateurs Waukesha
County Exposition Center Forum Building, Highways J and
FT All orders MUST be accompanied by a SASE and mailed
to: KMRA Swapfest, P.O. Box 411, Waukesha, WI
53187-0411 General Admission - $4.00 ($5.00 at the
door)

NOVEMBER 1994

November 19-20, Sat.-Sun.: Fort Wayne, IN - Fort Wayne
Hamfest Sponsor: Allen County Amateur Radio Technical
Society (ACARTS) Allen County War Memorial Coliseum
Exposition Center Admission: $5.00 (No advance ticket
sales.) For information or table orders, send a SASE
to: ACARTS, P. O. Box 10342, Fort Wayne, IN 46851 or
call John Rufner at 219-483-6305 (table info) Don Gag-
non at 219-484-3317 (general info)

Nov 27, Sunday: Wheaton, IL - GMRS of Illinois May Fest
'94. Admission $5. Starts 8 AM. Setup 6 AM. Info,
call (708)690-1492.

COMPUTERFEST SCHEDULE

September 17, Saturday: Kankakee, IL - Computer Fest
1994. Sponsor: Kankakee River Valley Computer Users'
Group. Kankakee County Fairgrounds 9:00 a.m. to 3:30
p.m. Admission $4.00. Information: 815-935-8590 or
815-935-1605>

Computer Central, College of DuPAGE, Main Arena of the
Physical Education Building Park Blvd & College Road,
Glen Ellyn, Il. 708-940-7547 $5 with card Normal
admission $6.00 Opens 9:30 am - 3:00 pm

05/22/94, 06/26/94, 07/31/94, 09/18/94, 10/30/94,
11/27/94

Orland Park Computer Show held at The Orland Park Civic
Center, 147th Street & LaGrange Road, Orland Park, Il.
9:30AM - 3:00PM. Call 708-974-3123 for information or
to get on mailing list. Admission $5.00 or $4.00 with
card.

> a base?

I suppose it would depend on conditions and what you do more of. If
you are mostly mobile and rarely portable (on foot), or if you are in
a relatively remote area where repeaters are few and far between, then
you may want to go mobile. The advantage of a HT is that you can put
it on your belt and walk around with it and you can always plug it
into an amplifier, e.g., Ramsey's 2m HT amp, if you need more power
while mobile. Mobiles aren't as portable. Plus, an HT + amp is
easier to hide under the seat of your car.

Myself, I only have an HT + amp in the car, which is fine for my
purposes. I don't need a LOT of power while mobile, just enough to
hit the next repeater.

Steve

The other bands are boring and there is no one to talk to there anyway.
Two meters is the place to be. Even HF is boring.

BTW, anyone want to sell any of there boring HF, 440 or 1.2 stuff?

President's weekly address

This is Michael Corbin VK2PFQ.

What about a Country Branch of the W.I.A...What did he say??...Yes, you heard it correctly...What about a country branch of the W.I.A.... Well, that was what was suggested to me this week. It might not be such a bad idea if the goings on in the City don't improve. It's fast getting to the stage when yet another sleepless night makes you wonder what the hell you are doing in this job of President anyhow. Let me share a couple of thoughts with you. We will call it " A week in the life of the President of the N.S.W. Division". Lets start with last Sunday......

You'll recall I told you that the Federal Councillors had been replaced. Further, you might remember I said that this medium was not the place to discuss it.....Well, I've changed my mind. Members ought to be made aware that SOME of us on Council are trying to do the right thing while others are not. It all began when we asked Federal for a copy of the last three Federal Council meetings...It was all over an item in the minutes of an extraordinary Federal Convention held on 30th July last. The following is an extract....

Heading: AMATEUR RADIO MAGAZINE

"Sub Committee to approach four respondents: i.e. Hallmark, Peacock Press, Griffin Graphics and Jamie Harrison to produce one issue each. January to April.

Sub Committee before the next convention to produce a draft contract for long term publication (to be circulated prior to the convention to all councillors). October meeting will determine when the contract will commence. Final decision at February Meeting. Each of the four would be made an offer at a fixed rate. Federal Office operates as normal.

Sub committee is seeking co-operation of Publications Committee and Editor. Printer will remain the same. Material will be supplied camera ready art. Federal Secretary to consult Industrial Printing re negotiating print account. Federal Office to do advertising. Magazine will be in the same format. Fifth respondent to be acknowledged as unsuccessful. W. Roper to be advised that he is on the short list.

Sub-committee to respond to all six applicants."...Unquote.

Five people on the present Council considered it was inappropriate for Mr. Harrison to be involved in the selection of a replacement

producer of Amateur Radio Magazine as there was an obvious relationship with one of the respondents. Four councillors did not. I believe it is the democratic right of anyone, including Jamie Harrison, to apply to run Amateur Radio Magazine. The propriety of a relative being involved in any selection process is undesirable.

At a special meeting of the Federal Executive held last Sunday. The Resolution that I have just read to you was scraped. Mr.Bill Roper, the present editor, was offered a 2 year contract. Details are presently being prepared. This action was as a result of this Division advising all federal Councillors of our concerns.

Quite apart from this there was another matter concerning Mr. Harrison. He had been chosen as a delegate to the IARU Region 3 conference in Singapore this coming week... the cost.... around $2,300.00 to the Wireless Institute of Australia Federal. That's partly OUR MONEY. The N.S.W. Division thought that since Mr. Harrison no longer represented this Division, such a trip might not be appropriate. A motion to this end was forwarded to the Federal office as an Urgent agenda item for last Sunday's Meeting. It turned out that as a result of, according to one Delegate, threatened legal action..... A majority of the delegates did not agree with us ... Mr. Harrison left yesterday.

Well that doesn't seem to be much to loose any sleep over you might say.....Well, I haven't finished yet.

At the last Council Meeting a group of six Repeater Applications were approved. Ian Rosser our new NTAC man, presented these for our perusal and discussion. The Applications were passed over to Mr. Harrison for forwarding to the Spectrum Management Authority for the issuing of licenses. Pretty simple stuff eh! Well it seems that instead of taking them home to write the necessary letter, the Secretary, Mr. Harrison left them in the Office.... at least he claims he did, why or what for, the Lord only knows. Anyhow they seem to have disappeared ... explanation .... SOMEONE PINCHED 'EM! It was even suggested that Barry White was seen looking at them!!!!! Could it be that they were suggesting that Barry stole them? I hardly think so...DO YOU?.....I have contacted Barry and he tells me that he had not even SEEN these applications. However, he did admit, UNDER INTENSE QUESTIONING, that he had discussed one application regarding the Great Lakes Club with Ian Rosser.(Something about a clash of frequency allocations) Well, I'll give YOU the list of the six applicant. YOU make up your own mind.

BLUE MOUNTAIN A.R.C. ......Application.... LOST
SOUTHERN HIGHLANDS A.R.C. ...Application.... LOST
KEMPSEY A.R.C. ......Application....NOT LOST
SYDNEY A.T.V. GROUP ......Application.... LOST
PARRAMATTA A.R.C. ......Application....NOT LOST
LIVERPOOL A.R.C. ......Application.... LOST

See any pattern ? I can't resist it... Hmmmmmmmmm!!!!!!

As President I apologise for this. Ian Rosser who is laid up, will forward the necessary replacement forms out this week, to those unfortunate Clubs who have had their applications maliciously stolen...Really .. You'd think we came down in the last shower. Wouldn't you. The Institute will provide express mail envelopes to expedite the applications. The Secretary has not bothered to apologise to anyone, so I'll do it on behalf of those of us on Council, who only want to get on with the job - despite the constant opposition we continually face from some delinquent councillors.

It's not the only thing to have been discovered that has been "stolen". It appears Mr. Harrison also left some minutes of several Council meetings, a lever arch folder labeled FOLIO 3 along with some other things, on the top of the safe way way way back in June. These have disappeared as well...Oh dear Oh dear! .... the "theft" was discovered last Thursday, about the same time as a request came from the Federal office asking about some outstanding matters that our secretary had not take care of!!!!!!! Don't you think it's strange that it took from 23rd June 'till now to discover the loss???? .... Perhaps I should take up the matter of these breaches in our Security net with our Divisional Security Officer, John Robinson VK2XY .... Yes, I'll do that first thing Monday morning.

Now, after things like this you can see why the Country blokes are suggesting they form their own branch of the W.I.A. ...Can you blame them? The whole thing is completely ridiculous. The S.M.A. must be killing themselves laughing..... The W.I.A. seems hell bent on self destruction. How could we ever be considered a force to be reckoned with, when we spend all our time fighting amongst ourselves. When they want those much talked about bits of 70 cms and 2 metres they will just waltz in and take them. It now appears that Federal is just as big a shemozzle. There is, or rather there were, several common denominators, but part of that been fixed. Why is it, that, some people seem to have a hidden agendas?..... why can't we just all be amateur radio operators and enthusiast, who belong to a club, which is supposed to be looking after it's members. If you wonder why I mention these matters at all it's really quite simple. My agenda and those who support me on Council is to fix the problem. Anyone who opposes this aim is against the members. I tell you so that you won't be under any false impressions as to whose who. The majority of amateurs want peace and I mean to see that they get it!

Well hang in there Country Members. Give us until the next election. Then you can show, who or what you want, by the way you vote. Apart from this the week didn't go too badly, except for the usual collection of "slings and arrows" on Packet Radio.

I'm prepared to hang in there until election time, and with the support of you the members and enough Councillors, we will get the job done. By then I hope it will be time for me to retire back to

the Country or .... maybe I'll run again.....it appears there is going to be a cast of thousands running..... I'll cross that bridge when I come to it.

See you next week.

WIA Morse class

The next Morse class at W.I.A. Parramatta will commence on the 28th September 1994 at 7pm, providing there are enough students attending.

Could any one interested in attending this course please contact the Office and leave your name and phone number with Mrs. Morris, or on the answering machine at any hour.

W.I.A.Exams

Don't forget, that the next exams to be held by the W.I.A. (N.S.W. Division) at 109 Wigram Street Parramatta will be on 18th September and applications close this Friday the 9th September 12pm

All enquiries to the office on 689-2417.

Jim Walker VK2XJW
Education & Exam. Coordinator

1994 Callbook

There are heaps and heaps of 1994 callbooks still in stock. Owing to filed day inactivity we have surplus stocks.

Why not call the office to reserve your copy ?

Price: $11.00 to members -- $12.50 posted.

Scout/Guide JOTA 1994

I would like to once (again) extend my thanks to W.I.A. for its continued support for Jamboree On The Air each year. As you are aware, JOTA is a world wide activity, encompassing most countries in the world. Last year there were 517,466 participants in the Scout and Guide movements. There were 10,798 Radio bases operating, and 33,596 Amateur Operators made these figures possible. We are very proud of that result and very grateful to your fellow operators who usually come forward and assist us at this time of the year.

This year JOTA is being held during the weekend of 16/17th October. We are looking forward to a very successful year again,

having a new team at the helm at NSW Branch and from the support your organisation gives us.

I therefore ask you to spread this information throughout your Division, and ask for your support again to help us make NSW the biggest Participating State in Australia.

Yours in Radio Scouting
Ron Edwards, for John Vincent
Branch Electronic Activities Leader

Report on the 6m VK2RWI repeater

The 6m repeater has suffered a couple of major setbacks.

I have found that the exciter output of 53.850MHz has become unstable and it drifts off frequency. The frequency has been drifting around the repeater's output frequency up to plus minus 100kHz or so. This explains some of the funny noises some of you users have been hearing. John VK2XTB has offered to make a new exciter board using a modified M5 transceiver being Phased Locked Looped controlled. I would like to thank John for this offer. I have found another crystal locked exciter in my junk box collection being close to 53.850MHz. This other exciter not of the Phillips FM variety is very stable and needs a crystal cut from Hy-Q in Melbourne.

Secondly the Beacon at Dural is too close being 430kHz away from the repeater's input of 52.850MHz. Even though there are three cavity filters this is still not enough filtration for the receiver. If the beacon is turned off then the repeater functions properly. Both Dave VK2KFU and I have sought to have the repeater's receiver relocated elsewhere via a 70cm link to overcome this desense problem by the 6m beacon. For that I would like to thank Dave VK2KFU and Peter VK2XZP for their help with this.

I would like to apologise for this inconvenience because it may be out of operation for 4 to 6 weeks. When the 6m repeater returns, it will be bigger and better than Ben Hur, you'll see!!

Tony Liolio
VK2ZLT

Reciprocal licensing update

Agreements for reciprocal licensing, permitting amateurs from Australia to operate in overseas countries without having to sit an examination there, and vice-versa, have been in place between Australia and various countries for many years. A separate bilateral arrangement exists with each country in the scheme.

Presently, 16 countries have reciprocal licensing arrangements with Australia and negotiations are under way with at least seven more.

These 16 countries are:
Canada
Denmark
France (inc. New caledonia)
Germany
India
Israel
Japan
Malaysia
New Zealand
Papua New Guinea
Poland
Solomon Islands
Spain
Switzerland
United Kingsom
USA

Countries with which reciprocal agreements are currently under negotiation are:
Austria
Greece
Italy
Kiribati
Peru
South Korea
Vanuatu

With the likelihood that Australia will enter an agreement with CEPT (European Conference of Postal and Telecommunications) countries for short term visitors, then perhaps the protracted time and effort currently needed by the Spectrum Management Agency and the Department of Foreign Affairs and Trade to effect reciprocal licensing agreements will disappear.

However, bilateral agreements between Australia and other countries for permanent residents in Australia from overseas will still be necessary.

WICEN News

The next WICEN Blue Mountains meeting will be tomorrow, starting at 8pm. The location is the Glenbrook Bush Fire Brigade Station and there will be a talk in on 147.175 MHz simplex for people needing directions. The guest speaker will be Phil VK2GPB who will be giving a lecture and showing some videos on bushfire awareness and survival techniques. All interested persons are invited to attend, and for more information please contact Alan VK2YYJ on (02) 839-1388 during office hours.

Exercise-stressed members will be pleased to learn that there are no major exercises this month, although October will be somewhat busy. The VRA Annual Conference, celebrating 25 years, will be held at Wagga on the weekend of 8-9th October. At this conference Max Walters will step down after 25 years as President, so a large attendance is expected. There will be a Dinner on Saturday 8th October, and an informal gathering on Sunday 9th. There is also a family outing on Saturday whilst delegates are at the conference. Any WICEN member wishing to attend should contact the State Co-ordinator, John Howard VK2AMH on (02) 477-6616, TODAY. The "Hawkesbury Classic Paddle" is on the weekend of 22nd-23rd October; and as before, Kevin VK2CKD is in charge. The WICEN Co-ordinators conference will be held at Bathurst on the weekend of 29-30th October. The format will be primarily a training Seminar with emphasis on Regional administration, and Operations with a short business session. All members are invited, and they will be able to contribute towards its success.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Shepparton 1994 Communications Day

Amateur television activities will be a highlight of this year's Shepparton Communications Day on the 18 of September.

A comprehensive display of the latest techniques will be demonstrated by John, VK3LM and Alf, VK3CQE. SSTV was a great success when last demonstrated at Shepparton several years ago.

Staying with the television theme, Wayne, VK3XQA will display amateur fast scan television and hopes to feature another of his Carcam broadcasts from the streets of Shepparton back to the venue. The availability of today's hi-tech video equipment allows activities in both of these fields only dreamed about a few years ago.

At the other end of the time-line a comprehensive display of vintage radios restored to their former glory will feature. This equipment proved very popular in 1993 and members of the vintage radio fraternity will be out in force to show off their handy work. Some vintage radio equipment, kits and parts will be

available for sale.

Major traders who have indicated that they will be attending include AJ & J Coman, Daycom Electronics, Dick Smith Electronics, Icom Australia, Nally Towers, Strictly Ham and ZRV Electronics. Once again a comprehensive display of the latest equipment will be on display.

Trade/swap tables will be available from $5 (depending on the size required) plus the normal admission charge. Tables not prepaid for will attract a $5 surcharge and be subject to availability. Space limitations and the hiring of the tables make pre-booking necessary. Amongst the trade tables will be a large quantity of equipment from the estate of the late Alan Styles, VK3TV. This will include test equipment, radios and parts.

Requests for Disposals tables and payment must be made to the Shepparton and District Amateur Radio Club, P.O. Box 692, Shepparton, 3630.

Ted - VK3MBK will provide a Melbourne contact for general information, telephone 03 386842.

Admission remains at $5 per head (accompanying children free) and includes the usual free tea and coffee. A two course meal consisting of a barbecue lunch with salad plus sweets for $5 will be available. Morning and afternoon teas will also be served.

The venue will be the Shepparton Youth Club Hall located in Rowe St Shepparton. Doors will open at 10 am.

Talk-in will be provided by VK3SOL on VK3RGV 2 metres, 146.650 MHz. Call on the output if you have trouble raising it on your handheld once in the city itself!!

Members of the Shepparton and District Amateur Radio Club look forward to seeing you on Sunday the 18 September at the 1994 Communications Day.

Peter, VK3YF
Communications Day Publicity Oficer

News brief

Researchers at the University of Sydney have made an interesting discovery that could yield major benefits in the areas of solar energy and optics ... and they owe it all to a fish.

The physicists were arguing at lunchtime over what makes a fish so "silvery" and, unable to reach a conclusion, they went to the Pyrmont Fish Market, bought the shiniest fish they could find, and took it back to the lab. The skin of the fish contained "multiple stacks of organic crystals, interleaved by layers of watery tissues, arranged on Chaos Theory principles", in other words in

an apparently disordered manner, instead of neat arrays of cells.

The highly efficient reflectors are intended to confuse predators, but this new discovery promises to lead to more efficient solar mirrors and other optical and reflective devices.

****

Regular listeners to this broadcast may remember when we reported two years ago that a computer had temporarliy taken over from the human disk jockey at Sydney AM station 2SM, following a takeover by the company Wesgo. After a transition period of a few weeks the humans returned, and 2SM was reborn with a new program format. The interesting thing about the exercise was that during those few weeks, the station's ratings had jumped by 40 per cent.

Perhaps someone learned from that exercise, as the station (now known as Gold 1269) is making extensive use of the computerised DJ once again. The Sydney Morning Herald's radio columnist, Richard Ackland, highlights the apparent work schedule of the station's DJ, Andy Church, who goes to air from 6am to midday, and 7pm to midnight six days a week. A rather tough workload for a human, but Andy programs the computer with his playlist, and spends most of his "air-time" away from the studio. The computer's hard disk holds the digitised audio for about 1,000 songs, and pre-recorded station IDs and music back-announcement; news reports are patched in automatically from station 2WS.

****

On Wednesday, the Minister for Communication, Mr. Lee, officially launched a new mobile phone service that covers ALL of Australia, even the most remote outback locations. Calls from mobile stations can now be relayed via satellite to the Optus ground station at Belrose on Sydney's Northern Beaches, where the calls enter the conventional long-distance network. Telecom is expected to launch a competing system sometime next year.

The Optus system will initially service companies operating in remote areas; with mobile sets costing $8,000 each, and calls costing up to $2.40 a minute, not many private individuals are expected to use the service at this stage.

The people at Optus has other reasons to say "Yes!" this week, as the company's $200 million "B3" satellite was successfully launched last Sunday morning (28th August). B3 replaces the unfortunate B2 satellite which reportedly went into "terrestrial service" over a large part of Western China last year. B3 will carry telecommunications and Pay TV traffic.

However, not everyone was smiling in space circles this week... a $550 million dollar Japanese satellite named "Kiku" (or "Chrysanthemum") failed to reach its final geostationary orbit due

to an engine failure. It now sits in a highly eccentric elliptical orbit, and adds another two tonnes to the growing collection of "space junk".

****

"News briefs" looks at communications news items that appear in the mainstream media. Thanks this week go to "The Australian" and "The Sydney Morning Herald". If your local or regional paper runs an item of interest to Radio Amateurs, why not send a clipping to the Divisional Office?

-- Richard Murnane VK2SKY

IPS weekly report

T 26 19 25 21 28 25 24

SUMMARY OF ACTIVITY

Solar activity was moderate on 30th August, with 2 M1 flares, low on 1st Spetember, and very low for the remainder of the period.

The geomagnetic field at Learmonth (WA) was quiet 26th and 30th August, and quiet to unsettled otherwise.

Ionospheric F2 critical frequencies at Sydney were near predicted monthly values with enhancements of up to 30 per cent on 29th, and up to 50 per cent on 30th August.

FORECAST FOR THE NEXT WEEK (2 - 8 September)

SOLAR: Moderate to low (isolated fadeouts possible).

GEOMAGNETIC: Quiet to unsettled, until 6 September then increasing to active levels with possible minor storm periods during local night.

IONOSPHERIC: Near predicted monthly values, until 6 September after which degraded conditions are expected.

Courtesy of IPS Radio and Space Services, Sydney

Summary provided by Pat VK2JPA ANARTS Broadcast Officer

CLUB NEWS

Waverley Amateur Radio Society (Inc.)

The Committee of the Waverley Amateur Radio Society has been busy over the last couple of weeks and has got some news for club members about our meeting venue.

Come along to the next club meeting to be held on Wednesday the 21st September at the Waverley Council's Multi Purpose Centre in Bondi Junction to find out more about it.

Also at this meeting Aub Topp VK2AXT, the N.S.W. Divisional Librarian, will be our guest lecturer.

Listen to next week's broadcast for further details.

Submitted by Eric van de Weyer VK2KUR

Castle Hill Amateur Radio Club

The next meeting of the Castle Hill Amateur Radio Club will be held on Wednesday, 7th September at 8 p.m.

The venue will be Castle Hill Military Radio Museum.

Our lecturer for the evening will be Tony Lamacchia, VK2BTL. Tony will be enlightening us on the subject of "Radio Explosive Hazards" as applied to RF in military applications.

Tony is an expert in this field and his talk promises to be most interesting.

Visitors are most welcome to attend and even more welcome to join our club.

For further details contact Ian O'Toole, VK2ZIO on (02) 680 2112.

from Ian O'Toole, Publicity Officer, CHARC

Australian Amateur Televison Club Inc.

The next General Meeting of the A.A.T.C. Inc is on September 11th, the 2nd Sunday of the month at 1.00 pm at Amateur House, Parramatta.

The technical lecture on the day will be the assembly and overview of the new 1.2GHz pre-amp designed by Mark VK2XOF. Boards for this project will be available from the Treasurer on the day including assembly information. The new 1250 MHz ATV receiver will be shown with boards and assembly also available. - by the way if we have power bring that 1.4meg blank floppy for a special software release.

Lectures at meetings to come will be on the correct use of oscilloscopes, plus how to make 1.2 GHz go to Newcastle and beyond and hints on using IBM CAD Easytrax PCB design software.

The printed circuit board Open Day for A.A.T.C. members only will be held at Bexley on October 30th - the object will be to make a PCB of for a club project, EA/SC magazine project or your choice.

For more information about the A.A.T.C. listen to the net on Tuesday nights from the Liverpool area on 146.625 MHz - approx 19.30 hrs - or watch us on 1250 MHz from our Oakdale repeater any-time.

AATC Inc. Publicity Officer Bob Barnes VJ2R

VHF-UHF DX Group

The next VHF-UHF DX Group meeting will be held on Tuesday 20 September at Amateur Radio House. This meeting will be an equipment workshop on the construction of high power linear ampli-fiers and low noise preamplifliers.

Working examples of linears and preamplifliers will be exhibited to demonstrate how practical construction problems are solved.

The Group also sponsors activity nights on 144 MHz on Tuesdays and 70 centimetres on Thursdays.

Why not check into the Group's Sunday evening net on 146.5 MHz FM for details of Group activities. The Sunday evening net starts at 8:15 pm.

Submitted on behalf of Richard Sourlie VK2ARS

FROM THE ST GEORGE AMATEUR RADIO SOCIETY

Next month's meeting of the Society will be held at the usual venue, that is in the 1st Allawah Scout Hall, corner of Bellevue Pde. and Blakesley Rd., South Hurstville at 7.30pm Wednesday evening the 7th of September 1994.

The Society's guest speaker for this meeting will be Roger Henley VK2ZIG who will be giving those present an interesting run down on project Raven, which is the VHF & UHF radio system used for military communications.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

Members and other interested amateurs are advised that on Saturday the 17th of September the society will be holding its annual Bill Shakespeare Auction.

The auction will be held at the normal meeting venue, that is in the 1st. Allawah Scout Hall corner of Bellevue Pde and Blakesley Rd, South Hurstville.

Equipment for the auction will be accepted between 10 and 11am.

Viewing of equipment between 11 and 12noon.

Auction to start at 12noon sharp.

Credit card facilities are expected to be available for those requiring this facility and the snack bar will be open during the course of the auction.

Inquiries regarding any specific details are welcome, please phone Publicity Officer, ALLAN VK2XF at home on 533-1006.

de Allan VK2XF, Publicity Officer.

Great Lakes Radio Club

The Great Lakes Radio Club, at its August meeting, took initial steps to establish, as part of its program for the coming year, a second voice repeater linked to its main repeater, VK2RGL, for coverage of areas of the lakes system to the south-east. These areas, which include some pretty rough terrain, are, in places, shielded from the main repeater, but contain some busy through roads, making coverage desirable.

Since the Great Lakes Club is open to CB operators, as well as to amateurs, it has just placed into service, at a temporary location, a UHF CB repeater, on Channel 4. This repeater is primarily for the use of emergency services, particularly the NSW Bush Fire Brigade, but is for general use when not otherwise required. It will be moved to a higher location as soon as the site is ready.

For the benefit of travellers, and for amateurs who may have difficulty in otherwise receiving the WIA Sunday news broadcasts, as well as for local amateurs, the club's repeater re-transmits these broadcasts on automatic relay. We have also just commenced running a local call-back program following the Sunday morning broadcast. This takes place initially on the repeater, after which calls are also taken on various bands, details of which are given on the repeater. The repeater frequencies agin are, input 147.975 MHz, output 147.375 MHz. Don't forget to also listen for our local net on Thursday nights at 1930 EAST.

Club members are reminded that annual subscriptions, set at $15 for the coming year, are now due. With other projects in the pipeline, we need your support.

Stan Ellis, VK2DDL

Q: What's wrong with this Info-hams inquiry?:
- -

Date: 6 Sep 1994 21:09:02 +1000
From:qrm4.ucsd.edu!abcde!mis-info!news.ub.com!whoami@network.ucsd.edu
Subject: Any opinions on YK-com XX-240?
To: info-hams@ucsd.edu

I'm considering purchase of the YK-com XX-240 dual band multimode
mobile rig. Does anyone have experience with this unit? What else
would you recommend in the under $700 price range? Thanks,

Ferd Fooham
KF1QRZ "Ice cream has no bones" --anonymous

- -

A: The problem is that more than just Ferd's profound quote is anonymous, the
WHOLE MESSAGE is anonymous! Ferd's call sign adequately identifies him
on the air, but does not tell a Info-hams digest reader how to contact him
via e-mail. Perhaps some mail systems can extract a return address from
the "From:" trail the Info-hams server received. My mail system cannot.

The solution is obvious: INCLUDE YOUR E-MAIL ADDR IN THE BODY OF YOUR
MESSAGE IF YOU EXPECT REPLIES ! Otherwise, potential respondants can only
answer via an Info-hams posting. The best use of network bandwidth is
typically to
respond DIRECTLY to the individual. I would expect hams and net-dwellers
to be highly aware of these basic bandwitdth issues.

Be sure your "signature" has a valid Internet alias.

I just examined a recent Info-hams digest (#996). It contained 14 postings
placed by individuals who ostensibly expected replies to their queries and
diatribes. Six contained embedded e-mail addresses, eight did not. What's
wrong with this picture?

SpaceNews
=========

MONDAY SEPTEMBER 5, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* SKY WATCH *
=============
In September's evening twilight, Saturn shines in the east-southeastern sky just above the horizon. By nightfall it is fairly high and bright, appearing as a golden point of light to the naked eye. Because Saturn is closest to Earth this year, it will attain a magnitude of 0.5, located in the constellation of Aquarius. Saturn may also be found by looking for the bright star of Formalhaut in the constellation of Piscis Austrinus which has a magnitude of +1.2. A small telescope will reveal the complex system of orbiting rings and moons. The largest moon, Titan, appears as an 8th magnitude point near the planet. Also Saturn's rings are now only 7 degrees from being edge on as seen from here on Earth.

Near the bright star, Spica, one can find Venus shining at a magnitude of -4.4 when the month begins. On the evening of September 8, Venus and the young Moon will pass each other in the western evening sky. On the evening of September 20, Venus wil reach it's greatest brilliancy at a magnitude of -4.6. If Venus is seen through a telescope, it will be found to be in a wanning crescent during it's brightest, showing us here on Earth, only half of it's brilliancy.

Jupiter is finally getting a rest after the tremendous impacts it suffered in July from the fragments of Comet Shoemaker-Levy 9. But Jupiter is still the second brightest planet after Venus, shining at a magnitude of -1.8 and can still be seen in the constellation of Libra. On September 1, Jupiter can be found about 15 degrees to the upper left of Venus and as the month passes, Jupiter will slide toward Venus in the western twilight sky. On September 9, Jupiter will be near the young crescent Moon. Watch for Venus, Jupiter, and the Moon on the evening of September 8 as the three approach each other. This will be a fine view for the astrophotographers who specialize in planet combinations.

Mercury can be found in the evening sky this month, but will remain very close to the horizon. Because Mercury will be so close to the horizon, it will probably be hidden from view this month.

Pluto can be found in the constellation of Libra and is in the southwestern sky just after sunset. But it shines at a magnitude of +13.8, so it will take a telescope of at least 8 inches to see the tiny point of light in the dark sky.

Uranus and Neptune, magnitudes 5.7 and 7.9, lie in the south after sunset during September in the rich starfields of Sagittarius.

Mars is the only planet that will rise a couple hours before dawn this month, in the eastern sky. On September 1 the wanning crescent Moon will be just below Mars.

* MIR NEWS *
============
The Mir space station apparently suffered no hits from the recent Perseid meteor shower. Several particles collided with the space station during last year's meteor shower.

The PROGRESS-M24 freighter was scheduled for launch Baykonur on 25-Aug-94 at 1425 UTC. Listeners in Western Europe were alerted listen for transmissions related to this launch on the known frequencies (166.140, 166.130, 165.874 and 922.755 MHz +/- Doppler) 3 hours after liftoff.

Instead of 4, only 2 EVAs will be made by Malenchenko and Musabayev. These EVAs are scheduled for the 8th and 12th of September 1994. Their purpose is to transfer solar panels from the Kristall to the Kvant-1 module.

The launch of Specktr (Module-O) has been delayed once again. Now there is word that the launch will take place in May 1995. Undoubtedly, this will also mean that the launch of Priroda (Module-E) will be put back too.

The schedule for American flights to Mir might need to be changed due to Spektr launch delay. No further details are available as of yet.

[Info via Chris v.d. Berg, NL-9165/A-UK3202]

* MORE MIR NEWS *
==========
Ascending nodes of Mir are currently taking place almost directly under the Sun. It is crossing the terminator close to its extreme northern and southern latitude excursions. As a result, Mir will be visible shortly before sunrise in the southern hemisphere, and shortly after sunset in the northern hemisphere for the next few weeks. Consult your favorite satellite orbital prediction software for the exact times for your location.

* SAREX NEWS *
==========
The STS-64 Space Shuttle Discovery Mission, tentatively scheduled for launch on September 9 at 20:30 UTC, will carry SAREX voice and packet radio on a 9 day mission. STS-64 will carry the Lidar In-Space Technology Experiment (LITE-1), the SPARTAN-201, and the Robot Operated Materials Processing System (ROMPS) experiment in addition to SAREX into a 57 degree inclination orbit.

Amateur Radio operators on Discovery include Dick Richards, KB5SIW, Commander, Blaine Hammond, KC5HBS, Pilot, and Jerry Linenger, KC5HBR, Mission Specialist. Primary callsign for FM voice contacts will be KB5SIW, while W5RRR-1 will be used for packet radio contacts. All operations will utilize separate uplink and downlink frequencies. DO NOT TRANSMIT on the downlink frequency!

Voice Freqs: Downlink: 145.55 MHz (Worldwide)
Uplinks: 144.91, 144.93, 144.95, 144.97, 144.99 MHz
(Except Europe)
144.70, 144.75, 144.80 MHz (Europe only)

Note: the crew will not favor any specific uplink
frequency, so your ability to work the crew will
be the "luck of the draw"

Packet Freqs: Downlink: 145.55 MHz
Uplink: 144.49 MHz

The Goddard Amateur Radio Club station, WA3NAN, in Greenbelt Maryland will be active and carry SAREX Bulletins and Shuttle Retransmissions on 3860 KHz, 7185 KHz, 14,295 KHz, 21,395 KHz, 28,650 KHz and 147.450 MHz (FM).

The following Keplerian elements have been rotated to the current planned launch time of Sep 9 at 20:30 UTC. The JSC-005 epoch is at the start of orbit 5, after the trim burns on orbits 3 and 4. The negative drag fit was

required to match the design trajectory because there is a 6.5 fps trim burn
on orbit 28. The phasing and circ burns on orbit 99 lower the altitude by
about 8 n.mi, so the second element set JSC-006 is required after that.
These Keps are provided by Gil Carman, WA5NOM at the Johnson Space Center
ARC.

STS-64
1 00064U 94253.10077961 -.00030838 00000-0 -39665-4 0 59
2 00064 57.0058 195.1865 0009670 275.6619 84.3358 16.05979206 51

Note: This element set (JSC-005) is valid for orbits 2 through 98.
Use JSC-006 (below) after 15 Sep 94, 22:51:30 UTC (MET 6/03:49:30).

STS-64
1 00064U 94259.01448182 .00096406 00000-0 94275-4 0 62
2 00064 57.0059 167.2656 0009343 269.2157 90.7841 16.11240267 1002

Note: This element set (JSC-006) is valid for orbits 99 through 142.
Use JSC-005 (above) before 15 Sep 94, 22:51:30 UTC (MET 6/03:49:30).
The deorbit burn is scheduled for 18 Sep at 15:40 UTC (MET 8/20:38).

3691. Scout Jamboral Radio Station

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-06 14:45:02 UTC
From: bmadsen@dsd.es.com
Message-ID: <34hv9e$3ff@es.com>
Source record: 260398
Cross-posted to: rec.scouting,rec.radio.amateur.misc

The Great Salt Lake Council (based in Salt Lake City, Utah) is having
its bi-annual "Utah Heritage Jamboral" this year on Sept. 16th and
17th. This event draws literally thousands of scouts from throughout
the council for a couple of days of great activities.

This year they're also organizing and setting up a Ham Radio station,
and I've been asked to distribute this information:

Ham Radio Operators will find a Talk-In on 145.69. A special event
station with K2BSA/7 will be operating from 0000 to 1800 GMT September
17 on the following frequencies:
15 meters 21.395 mc
20 meters 14.287 mc
40 meters 7.228 mc
80 meters 3.870 mc
Activities will include making contact with other scouts around the
world and sending messages to friends and family.

Please forward this information to anyone that might be interested;
they'd love to talk with other scouters around the world.

Although not necessary, I'd be curious to know who'd be willing to
join the Talk-In. If possible, send e-mail to me.

Thanks!

[distribution constrained]

Good morning all.

Just picked up an HTX202 yesterday and am interested in
finding commuter nets for the northeast corridor from
New York to Philadelphia and notification/scanner nets in
that same region.

I don't hear much about DTMF paging except for one post
many moons ago from someone with two different HT's and
neither can page the other.

I would love to see a repeater's secondary function be
a notification net that uses DTMF paging to activate
groups of listeners. Is this common?

Greg Bullough (greg@netcom.com) wrote:
: In article <1994Aug31.145924.17054@arrl.org> ehare@arrl.org (Ed Hare (KA1CV)) writes:
: > Even more sadly, I have seen us criticized
: >*appropriately* on this forum *instead* of having the "constructive
: >criticism" directed to the appropriate staff or to your Division
: >Director who *can* change League policy.

: Now this is VERY inappropriate. It comes across as trying to quash League
: Members' and other Radio Amateurs' expresssion of their thoughts in a
: public forum of their own choosing. For years, the staff, directors,
: and officers have had a forum of their own, QST, and have filtered
: dissenting opinions rather high-handedly. In fact, they frequently used
: the journal to belittle dissenting opinions.

Greg, you are misreading Ed's posting. The word "instead" in his text
is important. I know that Ed has no problem--nor do I--with people
posting criticism of ARRL here. What bothers him--and me--is that
people seem to think that posting here is all that is necessary. That's
not true because 1) many of the Directors don't read this forum, and 2)
a personal communication will always be more likely to result in action
than an undirected one. What Ed wants is for members to state their
opinions directly to the people who are in policy-making positions,
whatever those opinions may be, in *addition* to participating in
whatever dialogue they find useful--here or elsewhere. In no way does
he intend to stifle dissent or conversation on Usenet.

: Ed, I don't know if it's what you intend, but it comes across as if
: you are saying 'go through channels, where we can decide what spin to
: put on your expression of opinion...'

No, he's saying, "go through channels where it will do some good."

: As a organization run by the Membership, the League doesn't have the
: luxury of putting on blinders. At this point, I frankly expect my
: Division Director to be reading this forum (I'm willing to see
: the League foot the bill for an account, which may also be used
: for League business-related e-mail, if that's what it takes) in
: order to stay in touch with what people are saying about things.

This is rather a Usenet-centric point of view. What about the
Compuserve, Genie, AOL, etc forums? Aren't the members there entitled
to the same treatment? And, if so, just how many hours per day do you
expect the Directors to spend trolling the electronic forums? This,
mind you, along with their attendance almost every weekend (in some
cases) at hamfests, conventions and radio club meetings in their
divisions. And maybe even a bit of time on the air. In short, there are

a lot of places where amateurs congregate and Directors can listen to
member opinions. Demanding that Usenet be primary among those places is
unreasonable.

To anyone who really wants there own 2M rptr bad enough and doesn't want
coordination or interference hassles, consider moving to Eastern Montana
or North Dakota. Unless things have changed dramatically in the ten
years since I last drove thru there (the population sure hasn't), you
are lucky if you can hit one or two rptrs from anywhere in the state(s).
It was so bad that I was calling on .52 and .94 simplex working one guy
here and there and they would say,"Look for Joe W7XYZ when you get to
(name of next little burg 50 miles down the road) and say hello for me!"

I believe you must be asking about the Pocket Morse Code Trainer, mfg by
Computer Aided Technology Inc. at (214) 350-0888.
There is an ad for this in Sept CQ on page 100. Prices range from $29 to
$49. I have tried them both, and am very satisfied.

Jon makes an excellent point. I *happen* to have access to Internet
at work, but even though I have a PC at home I have no intention at this
point of forking over my own money for a monthly Internet service - Heck,
I don't even have cable TV! (Newton Minow was right...it's a vast waste-
land.....). I suspect there are *many* ARRL officials/appointees who
are in the same boat. Does ARRL *provide* Internet access to senior
officials (Directors, Vice-Directors, SMs, etc.)? I don't think so. I'm
sure a lot of them, like me, try and spend their money on the things
which interest them most, meaning ham radio (and whatever else Internet
is, it is *not* the same as hamming!). They also (as has been pointed
out) attend a *lot* of club meetings, hamfests, etc. That takes up a
great deal of their time, and they just may not feel too much like
spending the time they have left to themselves reading through the
newsgroups. And remember, typically on Internet you don't read a
group *once* to see a certain point of view expressed on some subject;
some of the threads go on for *weeks* (like this one - HI!). Some
League officials just may not have the time for that; they *may* be
too busy talking to people in person and over the air.

The best way to get an idea across that you really feel *strongly*
about in regard to ham radio is to either go to a meeting or hamfest
where you know your SM or Director will be present and let it be known
that you *really need* to talk to him/her for a few minutes, not just
BS and exchange pleasantries. I'd be very surprised if the official
didn't make a specil effort to hear you out; that's part of their job.

If for any reason you cannot meet in person, write a letter or
else e-mail ARRL Headquarters directly.

BTW, if worse comes to worse, pick up the 'phone and *call* your
SM - *everybody* has a telephone.

73,

Paul, K4MSG (not a League official, just a LM)

>globally available, where

people can rant and rave without having the
faintest idea of what they are talking about, in such quantity that it's
scarcely worth keeping up with. No wonder they don't have an official
presence.

Ed didn't say "write your Division Director and don't post", he just said
"write your Division Director". Once you do that, I'm sure Ed doesn't care
whether you ALSO post it, nail it to a church door, or hire a skywriter to
write an Estonian translation of your message over every major US city.
But if you want your Division Director to see your complaint, you know how
to contact your Division Director. Demanding that the DD wade through
MAKE`GREEN`CARDS`FAST and Does SWR Change With Line Color and even
"Re: Thanks, ARRL" just in case you accidently say something you'd like
him to read is just senseless.

USENET is just a hobby.

There was a connection to Zia in Colorado Springs, on 448.000. It was 2 or 3 hops from Albuquerque up through south central CO. I heard a snippet on the radio indicating it was no longer up, but I'm not sure. I know they were looking for a new site with better coverage and a more direct path.

I appreciate the fact that the League listens at all, given that there is
such a multitude of differing viewpoints! I would suspect that the "other"
onliners (AOL etc) are now able to access this group and contribute, but it
still seems that direct (US MAIL) is the majority. One last point, some of
us HAVE in fact communicated directly with the ARRL HQ staffers, only to
find that the problem or issue is not something that can be resolved by the
ARRL. In my case the 10 m QRM-from-11 m and the bootlegging into 10 m by
CBers is not something the ARRL can solve, or so K1ZZ informed me...sigh.

: I need some info on the Zia Connection.
: I'm familiar with what the ARRL Repeater Directory says about it,
: but rumor has it that there is a connection to it in Colorado
: Springs (what freq?), and I'm wondering if it extends into San
: Diego, CA (again, what freq, if any?).
: Any info forthcoming will be greatly appreciated.
:
Tom -

ZIA freqs in Colorado are as follows -

Cheyenne Mountain - Colorado Springs - 448.000 Minus - No PL
Deer Peak - Pueblo - 449.625 Minus - No PL
San Antonio Peak - Co./N. Mex. Border - 443.900 Plus - No PL

There are problems as of toady with these links, terrible audio from
Colorado into ZIA, good audio the other way. As of now, they are not
PL'ed, that may change.

No ZIA connection into San Diego, Yuma is the last repeater on Interstate 8.

Lou Nigro - KW7H

Source record: 260418

Good points. I am on MCI mail (address well publicized), CompuServe, Packet, Policy reflectors, on the air, at every club meeting/hamfest I can make, and whatever else. The idea is to be "plugged in" to what members feel/think/need/want. But I guarantee you that doesn't get me in touch with all the opinions that are being voiced.

If any member feels they have an idea/bitch/suggestion/praise/question that needs answered, then the SURE way to get it heard is by direct communications with their director or the cognizant person in the field organization or at HQ. Many of us lurk about the various "electronic town halls" but we can't be in all of them!

Heck yes, I'll continue to do all the things I'm doing to "be plugged in", and it's a very effective way to keep informed, but it is NOT a substitute for direct communications.

3712. Hooray to the FCC!

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-06 21:49:06 UTC
From: joen9yjz@aol.com
Message-ID: <34io4i$mml@search01.news.aol.com>
Source record: 260419

Well, contrary to what I have been hearing the last 8 weeks of my life, that it takes 15 weeks to get a call sign, mine finally arrived in the mail today on Tuesday. I took the Tech+ test on July 9th and received my license today, the 6th of September, having it issued on the 31st of August. Say hello to the one and only N9YJZ!! (8/9 weeks?!?)
Oh..by the way..thanks to the guys on usenet that kept me busy while I waited..73's!

Joe N9YJZ

: Radio Shack 2 books "Now you are talking" and "No Code Plus".
: I know that the 2nd has the test pool, but I was told that I need the
: first one to build some background knowledge in Ham Radio and electronics.

You don't need "Now you're talking," but I prefer its format--it
is written as a text on the subject matter, and you check your progress by
working the questions included in the back. The No Code Plus book, which
I bought (all the local stores were sold out of the other one), consists
almost entirely of the question pool with answers and explanations.

Personally, I'd recommend "Now You're Talking" over the other
book, but you should be able to pass the test with either book. There's
no reason at all to buy them both.

3714. Re: What is an ELMER?????

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-06 21:56:34 UTC
From: Hans Brakob <71111.260@CompuServe.COM>
Message-ID: <34ioii$23h$1@mhadf.inhouse.compuserve.com>
Source record: 260420

The term Elmer is not very old, perhaps 10-15 years?

I think it was "coined" by Rod Newkirk in his "How's DX"
column in QST when he talked of his Amateur Radio mentor
who happened to be named "Elmer". The name was picked
up to mean a more experienced ham who introduced or
guided a newcomer in his/her early days in the hobby.

I think!

73, de Hans

: e-mail to and from the InterNet. Respond via e-mail or news. Thanks.

Besides the technical problems, there's the legal issues. Any non-ham
traffic cannot move from Inet to Ham Packet. Also, even 3rd party
traffic can cause grief.

As a result, the mail GW's are few and often much be carefully watched
after.

3716. PACTOR changeover timing

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-06 23:08:50 UTC
From: peterk@seanews.akita.com
Message-ID: <FH89Rc1w165w@seanews.akita.com>
Source record: 260422

Does anyone know the minimum changeover time requirement for PACTOR and G-TOR? In other words, how fast does your radio have to switch between transmit and receive in order to work properly with these modes? I know AMTOR needs 20 ms or better. But I couldn't the find the PACTOR/G-TOR requirements in the manuals for either the PK-232 or the near-equivalent Kantronics unit that has G-TOR.

Here's my situation: I have an ICOM 745 and an almost 40-meter dipole fed with twin-lead and tuned with an AEA tuner. I have no problem tuning it to 1:1 on 40-10 meters. No RF in the shack that I'm aware of.

For digital modes, I'm using an old AEA CP-1 and MBA-TOR firmware on a Commodore 64 (don't laugh, it was cheap!). It works great on CW and RTTY, but I've never been able to get it to work reliably on AMTOR. If the other station is several thousand miles away, or if they increase their TXdelay a bit, it works with an occasional rephase. Otherwise, it gets out of synch and rephases every few words. This is with the AGC off or at its fastest setting, speech compression off, and using true FSK at 170 Hz (so speech compression shouldn't matter anyway). All this points to a transceiver that switches too slowly.

AEA says the Icom 745 is not on their list of problem rigs, and should work fine. Icom, on the other hand, says that the 745 changeover time is about 30 ms, and that's too long for AMTOR, which requires 20 ms.

All of which may not matter, since PACTOR seems to be replacing AMTOR for QSOs. If PACTOR needs a slower switching time than AMTOR, I may buy an AEA PK-232 and get on PACTOR. But if the switching times are the same, it probably won't work, and I shouldn't waste my money until I get a new HF rig, which ain't happening in the near future(!)

If anyone knows the switching times for PACTOR and G-TOR, or has any insights on using the Icom 745 and/or CP-1/MBA-TOR setups on "chirp modes," I'd be grateful for the info. Also, is PACTOR really always better than AMTOR? I've heard that PACTOR is much faster, but I've also heard that under marginal conditions, its throughput goes WAY down, and you wish you had AMTOR.

Thanks and 73,
Peter Klein, KD7MW

Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 06/2330Z SEPTEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 06 SEPTEMBER AND FORECAST FOR 07 SEPTEMBER - 09 SEPTEMBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 95/41

GOES satellite data for 05 Sep
Daily Proton Fluence >1 MeV: 4.3E+05
Daily Proton Fluence >10 MeV: 1.3E+04
Daily Electron Fluence >2 MeV: 2.5E+06
X-ray background: A9.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
07 Sep 08 Sep 09 Sep
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 07 Sep: 95/41

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 05 Sep
Learmonth 15 3334 3332
Fredericksburg 17 8
Planetary 17 8

Observed Kp for 05 Sep: 2233 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
07 Sep 16 Unsettled to active
08 Sep 25 Active
09 Sep 25 Active to minor storm
COMMENT: IPS Geomagnetic Warning 3 was issued on 4 September and is
current for interval 7-10 September. Active levels, with minor storm
periods during local night expected 7-10 September due to coronal
hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Sep normal normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Sep normal fair fair
08 Sep normal fair-poor poor
09 Sep normal fair-poor poor
COMMENT: HF Comms are expected to be degraded during interval
7-10 September, particularly at high lats. Low lats will
probably remain largely unaffected.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
06 Sep 29 near predicted monthly values

Predicted Monthly T-index for September: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
07 Sep 25 Near predicted monthly values
08 Sep 15 10 to 15% below predicted monthly values
09 Sep 20 10 to 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 2 was issued on 4 September
and is current for interval 7-10 September. HF comms conditions are
expected to be degraded 7-10 September.Strong spread F was observed
at Hobart last night.

3718. Need info: 27 MHz to 6 Meter transverter???

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-06 23:44:06 UTC
From: rbellville@aol.com
Message-ID: <34ius6$ooe@search01.news.aol.com>
Source record: 260424

Greetings,

I am looking for a transverter from 27 MHz to 6 meters. I recently purchased (real cheap) 4 SSB CBs and I'd like to make them useful on 6 meters. Anyone know of any good transmitting/receiving converters other that Hamtronics?

Please email me.

Thanks - Rob, N1NTE (email - RBellville@aol.com)

3719. CAP info

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-07 00:30:28 UTC
From: sohn@apple.com
Message-ID: <sohn-0609941730290001@phils1.atg.apple.com>
Source record: 260425

I am interesting in getting involved in CAP but can find little information about who to contact, what forms I need to file out, etc. I have downloaded the file from the ARRL file server, but this seems more targeted at military personnel. If you have any info, please drop me a line.

In article <34hrdd$e3g@eram.esi.com.au>, dave@eram.esi.com.au (Dave Horsfall
Just a quick signal report on the broadcast (morning):
40M - mostly 5 by 7 with a bit of qsb - best I've heard so far in Adelaide.
80M - unreadable
30M - unreadable - seems to be another station on the top all the time. Do you hear that in Sydney?

No other bands heard. Also, is there a call-back? I have yet to hear it. And is there a relay on 20M - haven't heard anything there either.

regards
Alan

3721. FCC getting faster

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-07 01:08:59 UTC
From: britton@epsilon.llumc.edu
Message-ID: <1994Sep7.010859.20877@proton.llumc.edu>

3723. Hiram Maxim's Flying Machine

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-07 02:08:04 UTC
From: kchen@apple.com
Message-ID: <34j7a4$l3k@apple.com>
Source record: 260478

By this point, many of you have probably made contact with
the /125 stations celebrating Hiram P. Maxim's 125th birthday.

Now, here is something I hadn't known before: take a look at
the "50 and 100 Years Ago" column in the September 1994 issue
of Scientific American.

The September *1894* issue of the Scientific American announced
that a Mr. Hiram Maxim had built a steam powered plane, which
unfortunately, tore itself apart upon leaving ground on July 1894.
It, however, made history by being the first powered flight to
leave ground.

The Old Man must not have quite reached his 25th birthday when
he attempted powered flight! This might explain why so many Hams
are also pilots.

There is also a picture of the "flying" machine on the same page.

Don't y'all rush out to buy Scientific American now, hear?

(I wasn't sure whether to post this to *.misc or *.homebrew :-)

73,

Kok Chen, AA6TY kchen@apple.com

3726. Novice class licence and remote computer access. Is it legal?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-07 03:22:35 UTC
From: russek@netcom.com
Message-ID: <russekCvqpDn.EAJ@netcom.com>
Source record: 260481

Help!
I'm very excited about getting into Amateur Radio. One of the MAJOR reasons why I started up the hobby is so that I can remotely controll my 486 dx 50 from a small 8086 palmtop PC remotely(through a 2 meter HT). After studying for the test, I noticed one question's answer saws that you are "NEVER" allowed to have an unattended transmitter. On the other hand it expressly states that in the 2 meter band, remote access is allowed. I don't get it! Does this mean I can or cannot have my PC unattended doing either DATA or what I hope to be the first to design, Voice recognition and artificial intelligence(sorta like the well hatted "BOTS" on IRC, only now on 2M HAM :) I will only have a Novice licence when I start this, I'm going to test for technitian plus but I haven't studied the Tech stuff enough(element 3 ques.) Please E-mail me back so I know what to work around.

P.S. for those techies out there, I've modified some pagers to operate off the 144Mhz range and I plan to use them as Radio Modems, I figure that a pager would have EXCELENT resistance from noise and reliable high speed capabilities (It also puts out a perfect serial signal if ya tap the processor) Nice way to give pagers to the whole pamily w/o paying the local pager companies.
Thanks in Advance for the help, hope to be on the air soon!

- Cory -

: Q: What's wrong with this Info-hams inquiry?:

Hi Gary, maybe this wasn't an info-hams inquiry at all. Info-hams stuff is posted to and from the netnews groups and almost all netnews newsreaders are capable of extracting the return address from netnews postings. If you don't get a real internet account, you will be forced to live with corrupted addresses... it is not the fault of the poster.

NOTE: The Effective Sunspot Number for 05 SEP 94 was 30.0.
The Full Kp Indices for 05 SEP 94 are: 2+ 2- 3- 3o 2+ 2- 2- 2-
The 3-Hr Ap Indices for 05 SEP 94 are: 10 6 13 15 10 6 6 6
Greater than 2 MeV Electron Fluence for 06 SEP is: 2.2E+06

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7773 (S08W18) produced the
largest event of the period, a C7/1F at 06/0059Z. This region
has declined slightly in spot number and area. Region 7776
(S08E30) produced a C1/SF at 06/0633Z and has grown slightly in
spot number and area. All other regions were quiet and stable.

Solar activity forecast: solar activity is expected to be
low with a chance of isolated M-class activity from either
Regions 7773 or 7776.

STD: A full-disk Yohkoh x-ray image has been appended to this report.

The geomagnetic field has been at mostly quiet to active levels for the past 24 hours. A brief period of minor storm activity was recorded from 06/09-15Z.

Geophysical activity forecast: the geomagnetic field is expected to be mostly unsettled to active for the next three days in response to a favorably positioned coronal hole.

Event probabilities 07 sep-09 sep

Class M 20/20/20
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 07 sep-09 sep

A. Middle Latitudes
Active 25/30/25
Minor Storm 15/20/15
Major-Severe Storm 05/10/10

B. High Latitudes
Active 25/30/25
Minor Storm 15/25/20
Major-Severe Storm 10/15/15

HF propagation conditions were near-normal over all regions. Gradual signal degradation is expected over the next several days in response to a recurrent coronal hole related disturbance. Degradation may be strongest on 08 September when levels of geomagnetic activity and high-latitude substorming are expected to be near a maximum. No significant signal degradation is expected, although effects of this activity should be felt into the middle latitudes, particularly on night-crossing circuits.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

| Just a quick signal report on the broadcast (morning):

Ripper, mate - thanks!

| 40M - mostly 5 by 7 with a bit of qsb - best I've heard so far in Adelaide.

Good - it will get better once I get the dipole back where it belongs.

| 80M - unreadable

Not surprising - try it in the evening (1930 EST, no change for DST).

| 30M - unreadable - seems to be another station on the top all the time. Do you
| hear that in Sydney?

No, other than the occasional CW signal.

| No other bands heard.

Well, you won't hear 160m, except possibly in the evening. There is
sometimes a relay on 18.120 as well. There is also a 10m broadcast,
on, ummm, 28.320 MHz.

| Also, is there a call-back? I have yet to hear it. And is
| there a relay on 20M - haven't heard anything there either.

There are call-backs on all bands. However, what you hear in the morning
on 160, 80 and 40 is AM, whereas callbacks (on 80 and 40) are taken on
an SSB transceiver.

3731. Part 15 devices, help!

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-07 04:54:19 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9409062154.aa02540@paris.ics.uci.edu>
Source record: 260486

Anyone Know about the following devices and Part 15?

-Garage Door openers
-Cordless phones (they seem to carry the warning label where Part 15
says that they have to accept interference...)
-Computer modems
-Home security alarms

I need to know how these are treated by Part 15 if possible, we have a
tower permit hearing on Wed night, and there is an irate attorney
coming who will complain about interference to those devices. I would
like to show her Part 15 and quietly relax.

I am already covering PRB-1 and the Communications Act of 1982 which preempts
local regulation of RFI problems, but the Part 15 stuff would be so very
nicely on target!

Anyone know ? Anyone see a warning label from Part 15 on any of these devices
at home?

I give a presentation tonight to a hearing board (Wed night) so if anyone
has some good info, could you pass it along soon?

>well dead, and how many people have even seen a radio for 1.2 gig or a
>higher band?

>73...Jim N2VNO

This is going to start a flame war - I just know it, but I think it's a valid point, and one which needs making:

If the "No CW test requirments for HF" crowd get their way, and all these people suddenly have access to the HF bands as well, how crowded will they be?

Since 2m in the US is getting extremely overcrowded, and it is 4MHz wide, how is HF going to survive, with 3.75MHz band space TOTAL on all bands available. Bear in mind that this number is approximate - it was arrived at from my understanding of US bandplans. In the UK the 2m band is 2MHz wide, and there is 3.35MHz of HF available, since 40m is 7.000-7.100 and 80m is 3.500-3.800.

This won't be a popular view, but if ALL hams, code and no-code, suddenly had access to ALL bands - what would happen?

Please don't mail me direct - if there is to be any debate I would prefer it to be on here ...

Such provocation and you haven't even called your first CQ?

Using 2 meter FM simplex, I've talked from Rochester, NY to Getysburg, PA
(over 200 miles) and to Thunder Bay, Ontario (over 500 miles.) On 446 Mhz,
I've worked an HT 150 miles away that was running 1/2 a watt. All quite
thrilling experiences. You can do `DX' with FM and with FM repeaters.
I'm not sure how close Oberlin is to the lake, but the summer tropo
season is a blast for everyone all over the Great Lakes.

Hams involved in public service often use FM simplex, but if the event
they are working on is over a wide area, they will use a repeater.

Swap nets, bulletins, and other services provided on repeaters are
`real' amateur radio. If your car breaks down and you don't have a
cell phone, hope that your local repeater has an autopatch or start
hichhiking.

Have fun, keep an open mind ...

I got bit by VHF contesting early in ham life and I love it! The January contest seems the best attended (all except for 7-land ;-) it must be too cold there in January.) In the June and September contests, the big guns haul equipment up to mountain tops and rain RF fire into the skys but it seems that activity drops off dramatically. January is a club competition, so a lot of home stations participate, but not nearly so many in June and next to nothing in September.

Please! Get on everything you have from 6 meters on up and look for lots of contacts starting this Saturday afternoon (Sept 10, 1800Z) and through Sunday evening. Unless you live in a tin shack, you _will_ hear stations. Don't worry if you don't know how the contest works. The very first station you talk to will be so rabidly hungry for your contact point that he or she will explain it all to you.

Make friends, help your local contesters, get on all the 6 meter and up simplex frequencies (except 146.520) and call CQ!

Please!!!

The Findlay Amateur Radio Club is holding the 52nd Findlay Hamfest this weekend on Sept. 11 at the Hancock County Fairgrounds in Findlay, Ohio. Vendor admission begins at 6:30 AM. General admission begins at 8AM.

This year we have rented another building (now 5 total buildings), so there are an additional 60 vendor spaces, of which about 30 spots are still available. Flea market space is available.

Admission is $5 at the gate, flea market spaces are $5 each, and each 8 ft table space in the vendor buildings is $10.

In addition to the 4 main prizes (two HF rigs, a VHF mobile radio, and a handheld) we will be giving away a hand held radio every hour from 9AM til 2 PM.

For more info - e-mail to n8et@delphi.com

A friend of mine is traveling to SW Colorado this week and I live in Longmont. We wanted to try to stay in touch via Colorado Connection, where possible. His final destination is Montrose, and it looks like there are CoConn repeaters in Salida and Leadville that could be used. I have a note scribbled in my repeater directory that 147.285 in Grand Junction may also be a CoConn repeater if he can hit it from Montrose.

My question is this: Are all CoConn repeaters linked all the time or is there some kind of schedule? Also, are there any CoConn repeaters closer to Montrose that we might use? There is an open repeater listed in the directory for Montrose that is supposed to be linked but to what, I don't know.
Thanks in advance,
Jim Deeming

I just got a nice letter yesterday from the NYS Custom Plates office.
They apologized for the delays which were due to heavy demand and some
problems with manufacturing the newly designed plates and assured me
that my plates would be shipped out by September 16th. They had cashed
the check around August 14th.

Kok Chen wrote:

>...Mr. Hiram Maxim had built a steam powered plane, which
> unfortunately, tore itself apart upon leaving ground on July 1894.

Close, but not quite accurate. Maxim did indeed build a steam-powered aircraft, which he was testing on a track, the function of which was to hold the aircraft to the ground; he was making a ground test, and was not yet trying to fly. The aircraft generated so much lift that it broke the track and flipped over. Maxim's flight control system, however, was so primative that had he tried to fly it, the machine would almost certainly have crashed. One can make the argument that Maxim's was the first heavier-than-air machine to lift off the earth's surface under its own power, but it was an accident, and it did so in the process of destroying itself. The real genius of the Wright Bros. machine lay in its control system, which was decades ahead of everyone else working on the problem at the time, most notably Langley.

Incidentally, I believe it was Hiram Stevens Maxim, inventor of the machine gun, who made the steam plane, not his son Hiram Percy Maxim, known to generations of hams as "the old man".

UTAH BALLOON GROUP LAUNCH

OF SUPERBALL 9-94

The Utah Balloon Group, a cooperative group from Utah State University, Logan Utah, members of the amateur radio community, and the Rock Mountain NASA Space Grant Consortium have planned a launch for September. This launch will use a small zero pressure "sounder" balloon designed for short duration flights.

The flight scheduled will use a small, 26 ft diameter, 19,000 cubic foot balloon, and a multitude of payloads with a Saturday, September 17, launch. The launch is in conjunction with the Boy Scouts of America, Great Salt Lake Council "Jamboral" near Park City, Utah. This is a large scout encampment with over 13,000 in attendance. We expect the launch to take place around 8:30 AM (14:30 UTC) from the Jamboral.

We have received permission from the National Council of the Boy Scouts of America call sign trustee to use its call K2BSA. The call sign on all transmissions will be K2BSA/7.

Payloads planned for the September 17th flight are as follows: FAA Aircraft Transponder; a primary Ham payload consisting of a 5 Channel GPS Receiver, VHF Transmitter on 146.54 MHz, and an ATV

transmitter on 434.00 MHz (CABLE channel 59). The telemetry from the primary payload will be sent in synthesized voice on the VHF frequency and on the voice sideband of the ATV. The ATV will be transmitting images from a black & white camera directed to the ground at a 30 degree angle off the horizon. This primary Ham payload is essentially the same payload, used for SuperBall 5-94, that was successfully launched on May 21 of this year from the Utah Ham Fest in Ogden. That payload was recovered the next day near St Charles, Idaho.

In addition to the refurbished Superball 5-94 payload the group also plans to test fly, as a secondary payload, part of the electronics that were developed this summer for a long duration flight. This secondary payload was designed to operate for extended periods from a solar array at very low power levels with a very limited power budget.

The RF deck for this secondary payload consists of the following: 2 meter FM transmitter on 145.810 MHz. This will run FM, CW, and direct FSK FEC G3PLX/ASCII AMTOR using a 1 KHz shift of the RF carrier. This will require an ALL MODE receiver set to demodulate the tones using the settings for 100 Baud FEC Amtor with a programmable multi-mode TNC with the Bell 202, 1 KHz shift selected (same filters as used for 1200 Baud VHF Packet). The CW is On/Off keying. The output power appears to be in the region of 150-200 milliwatts.

10 meters and 15 meters: 29.162 and 21.407 MHz respectively. These run Double Sideband, Suppressed carrier for the voice (during the times that the 2 meter transmitter runs FM). There will also be CW (on/off keying) and FSK FEC AMTOR (200 Hz shift - precisely 1/5th that on 2 meters.) The output power level is on the order of 20 milliwatts or so PEP.

Since this flight will only be a few hours duration the the RF and logic decks will be powered by the on board lithium packs. It is worth mentioning that the transmitter is not particularly temperature stable. That is one of the prices of simplicity and low-power consumption.

The Double Sideband was chosen on HF since it has a tremendous power advantage (at least an order of magnitude... probably more under "real-world" conditions) over the FM. It is also less-likely to annoy as many people.

The Aircraft Transponder is being included since the payload will exceed 4 kg, the "light balloon" limit, and our experience in the past has proven the value of FAA tracking. The positional information from the GPS receiver along with battery voltage and temperature information will be telemetered on the ATV audio sideband, both VHF frequencies and both HF frequencies, provided other parts of the payload are finished in time.

We expect to have monitoring equipment at the Jamboral site, including WB4APR's APRS (Automatic Packet Reporting System) software running; ATV monitors; and VHF and HF (operating on 7.155 MHz) communications with the chase teams.

The flight of the balloon will likely take it to the east in its initial assent phase and continue east as it approaches its float altitude of approximately 100,000 ft. We expect to cut down the payload after about 4 hours flight. Impact will likely be someplace in south west Wyoming or eastern Utah.

Allied with the balloon launch, arrangements have been made to operate K2BSA\7 on HF SSB, CW, and AMTOR from this site as a special event station. There will be a low power AM commercial broadcast station, KBSA, with with scouts acting as reporters and operators.

If you would like to hear more about our projects, you can be placed on our "balloons" InterNet mailing list. Please send your request to me at KI7OM@uugate.aim.utah.edu. Alternatively you can telnet into uugate and read items in the "balloons" area. If you live in our area and are interested in participating either in payload work or in the launch and chase, or if you are interested in actively tracking and copying telemetry please let me know.

3747. Re: A Repeater on 147.555

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-07 16:02:00 UTC
From: greg.smith@digcir.cts.com
Message-ID: <940907164950200@digcir.cts.com>
Source record: 260501

Having been TASMA Chairman for 1992 and 1993, I saw a great deal of problems when we asked repeater pair applicants to use existing equipment.

Repeaters are BIG status symbols for some Amateurs! The only saving grace was that the large majority of Hams feel that:

1) Simplex should be used whenever practical.

2) Repeaters should be put up ONLY to provide service where there was no prior capability. This includes adding machines to cover similar areas in order to alleviate congestion.

3) Although the FCC prohibits repeater inputs/outputs between 144.0-144.5 and 145.5-146.0Mhz, every Amateur repeater owner should educate him/herself with the locally accepted bandplan through the local frequency coordinator.

The REAL problem with frequency coordinators is that they CANNOT mandate whether or not a repeater goes on the air. If I had that power when I was TASMA chairman, I would have set minimum usage requirements on a TIME basis prior to allowing transmission. You see, there is no requirement in the FCC rules that a coordinated repeater MUST be used. There is only a requirement that it occupies a pair of frequencies. With all repeater frequencies co-channeled and with 15kHz channel spacings it is no wonder that the more selfish Amateurs start to lay claim to any and all simplex space outside of the FCC prohibited areas in order to avoid complaints.

Do you know why they don't care about simplexer's complaints?
It is because ONLY REPEATERS are afforded protection from interference through coordination. This is an FCC rule that needs to be changed. Coordination should be required for ANY fixed frequency operation lasting more than a month or so, including packet nodes, simpatches, and regularly scheduled simplex activities like nets.

Its a shame to see a valuable communications resource squandered by a few self-centered egotists. In the end, I expect to see the commercial interests point to this fact as yet another reason why they should be entitled to current Amateur Spectrum reallocation.

DON'T FORGET WHAT HAPPENED TO THE 220 MHz BAND!!!! Amateurs who wanted to preserve their control link frequencies between 220-222 did not have the info. published in the ARRL Repeater Directory. UPS got in there and said "See, the band is empty below 222MHz!"

>|> >But does every Ham have a right to have his own repeater?
>|> A very good question and the answer certainly must be *NO*.

Guess what. You are incorrect UNLESS the repeater in question has
an input or output between 144-144.5MHz and 145.5-146.0MHz, then
it's an FCC rules violation. Oh dear GOD how I WISH there were
a rule (not just a guideline) that stated you must have a particular
USAGE for a repeater that serves a particular USER BASE that was
cuurently NOT SERVED. Reciprocity of coverage areas here in the
Southern California area is at least tenfold. I can bring up at
least 10 repeaters from anywhere in So.Cal. with an HT with VERY
FEW exceptions. Do we really need this?!?

>but I have to ask why does "the answer certainly must be *NO*"? I
>agree that most repeater QSOs could be used on simplex at lower power,
>and thus, technically, they are breaking the law.

They are breaking "Good Amateur Practice". Which FCC Rule MANDATES
using simplex?

>I would say they probably do have the right, but that exercising it is
>not in the best interests of the ham community at large. I see nothing
>in Part 97 to say every ham *can't* have his (or her) own repeater.
>Please enlighten me and the group on your thinking.

This was the TASMA opinion through 1992 and 1993. As a matter of fact,
our Constitution and By-Laws MANDATES that we shall coordinate
repeaters whenever possible. This usually was based on whether or
not a significant amount of legitimate complaints was received
from fellow hams. To date, I have yet to see an engineering definition
for unacceptable interference. All of our coordination decisions
were based on SUBJECTIVE interference criteria (i.e. politics!)
because NOBODY could agree on an acceptable interference level.

DA> To anyone who really wants there own 2M rptr bad enough and doesn't
DA> want coordination or interference hassles, consider moving to Eastern
DA> Montana or North Dakota. Unless things have changed dramatically in
DA> the ten years since I last drove thru there (the population sure
DA> hasn't), you are lucky if you can hit one or two rptrs from anywhere in
DA> the state(s). It was so bad that I was calling on .52 and .94 simplex
DA> working one guy here and there and they would say,"Look for Joe W7XYZ
DA> when you get to (name of next little burg 50 miles down the road) and
DA> say hello for me!" Don N7EF <bigdon@eskimo.com>

The same situation occurs in Wendover, NV. During the Bonneville speed trials, the nearest repeater you can work is in Salt Lake City, UT, some 100 miles away. You need 50 watts to do it! BTW, frequency coordination is not really necessary in super-rural areas like this. The Ham-to-spectrum ratio is sooooo looooowwww!!

... Proofread carefully to see if you any words out.

Re: Radio Shack's "No Code Plus".
|> >: I know that the 2nd has the test pool

I have been using this book exclusively to study for over a
year now, and can pretty much rip through the question pools.

My question is, have the question pools changed at all since
new rules have been passed that change the answers to some of
the questions, such as the "pizza rule"? The cover reads
"Questions and Answers Effective July 1, 1993 to June 30, 1997",
but business use questions are now wrong.

Does the FCC ever rewrite question pools before they expire? I'd
hate to screw up the exam because a question or two have been
changed.

PC> : Springs (what freq?), and I'm wondering if it extends into San
PC> : Diego, CA (again, what freq, if any?).

The East County Repeater Association in San Diego has a remote base
on their 449.175 machine that can tie into ZIA. Their 147.24(+)
machine is continuously linked to a machine in Wickenburg, AZ but
it is not part of the ZIA Connection.

There is no ZIA machine in San Diego proper. You must use a remote
base. Try the ECRA BBS at 619-286-8918 (14400,N,8,1)

> conducting research on the subject.

Is this actually documented someplace? I'm skeptical, although I suppose that, given a very precise, unfortunate set of circumstances, it could happen. It's more likely with ionizing radiation, though. There was a fascinating internal report at a company for which I once worked, documenting injuries to two chaps who worked on an X-ray unit while it was powered up. They didn't feel a thing, but shortly thereafter (next day), they began to developed massive tissue necrosis (the flesh died!) and had a bunch of problems.

Again, that was ionizing radiation, which is different from RF.

>
> It's the cummulative exposure one should be concerned about.

Why? The established mechanism of microwave injury is heating of the body part. Remove the heat and the effect stops. Any damage that _was_ done, of course, remains until the body repairs it, so a bunch of frequent exposures is _almost_ as bad as a single exposure of the same magnitude. But the body will repair most damage caused by thermal effects. It's not like, say, lead poisoning, where the toxin remains in the body and accumulates with each subsequent dose.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
upwards of 14 weeks to process licenses (although as recently
as this week, some licenses have come through in six to eight weeks.
The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;

3757. US License Examination Opportunities Scheduled 9/7/94 to 12/12/94

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-07 17:44:00 UTC
From: "Jahnke, Bart, KB9NM" <bjahnke@arrl.org>
Message-ID: <2E6DFCC4@arrl.org>
Source record: 260509
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

[[EXAMS9.07W : 3416 in EXAMS9.07W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
upwards of 14 weeks to process licenses (although as recently
as this week, some licenses have come through in six to eight weeks.
The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1994 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1994 test fee is $5.75.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1994 test fee is $5.75.

They've been around for years. Most ARRL and RSGB antenna books have
them, primarily for satellite work.

Well, it has been about six weeks or so since I sent in my 610 form for
a change of address. Yesterday, I got the form back with a note telling
me that I must use the *new* 610. They enclosed a copy of the new form
stating I must fill it out and return it. So, I guess I'll do that and
wait another 6-8 weeks again. What a wonderful government we have!

3760. HPM Lesson?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-07 18:15:55 UTC
From: Hans Brakob <71111.260@CompuServe.COM>
Message-ID: <34l00rafl1@mhade.inhouse.compuserve.com>
Source record: 260512

It's Tuesday evening and the "/125" HPM event has been going strong for 5 days now. You'd think that most folks would have their "25" for the award, and that a few are hanging on for the stickers up to 125.

I got on this evening to see if perhaps I could help those few stragglers who need one or two more. Well, after 4 hours the band folded and I had upwards of 500 new ones in the log. This thing is as strong as it was early Saturday.

After 16 hours of operation I have 2142 QSO's on a single band/mode. "Annualizing" that to 24 hours you get over 3200 QSO's. In a 24-hour SweepStakes I'd be in the top-ten box with about half that number of Q's.

Question:

This is a "contest like" atmosphere, very similar to SweepStakes in that it is "domestic", and a "little pistol" can play the game. A LOT of folks are obviously enjoying it. Where are these same folks in the SS? What is the "trigger" that drew them ito this, or conversely, why aren't they in SS in similar numbers?

I have some partially baked thoughts on the subject, but I'd like to hear what others might think. (Especially those of you who did the "/125" thing, but never have played seriously in a domestic contest like SweepStakes.)

Comments?

Source record: 260513

Certainly. It's done on HF all the time. You could do an interleaved (essentially 2 antennas on one boom) design, or a trapped design.

In Maryland, try 146.76 (-), know as the Jessup repeater. It has 8 satellite receive sites and should take you through most of the state.

Andy

Also try 146.73 (-) when you're in Southern NJ. This is the Wilmington,DE machine and has tremendous reach from Cherry Hill, NJ to the Del/MD line.

He was quite prolific in a lot of fields. If I recall correctly, I believe that he's also responsible for having invented the automobile muffler, the firearm suppressor (silencer), and the Maxim machine gun. Don't spread the latter two around though. I'd hate for Sarah Brady to get wind of it and try have ham radio banned too! ;-)

Phonetic Alphabets (Alpha Bravo etc)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets and spelling alphabets. This collection
currently includes alphabets for the following languages:

English, French, German, Dutch, Flemish, Italian,
Rumantsch, Slovak, Polish, Hungarian, Swedish,
Finnish, Russian and Chinese.

This posting is a repeat of the one of 23rd July.

My thanks to the many contributors, not all of whom are
acknowledged below.

I can make no guarantee of accuracy of this information;
indeed please send me any corrections or additions.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
7 September 1994

***** ENGLISH *****

The NATO phonetic alphabet (as per the Cambridge Encyclopedia
of Language under Seaspeak):

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet, modulo Alfa and Juliett, is approved by
the International Civil Aviation Organization and the FAA.
The International Telecommunication Union Phonetics list
has: Alfa, Juliette, Oscar/Oskar, Victor/Viktor.
Dates from about 1956.
UK police use Indigo instead of India (?)]

Telecom B:

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found in Swedish, Dutch, Hungarian telephone directories.
A Swiss directory has: Andrew Charlie Lussy Queenie Sugar]

British A:

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich]

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala etc]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Allied Services 1945:

Able Baker Charlie Dog Edward Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tape Uncle Victor
William X-ray Yoke Zebra

From a book entitled "The Complete Morse Instructor..." (1944):

able baker charlie dog easy fox george how item jig king
love mike nan oboe peter queen roger sugar tare uncle victor
william x-ray yoke zebra

[The same alphabet is described as "Used by Armed services of
USA & GB" in the ARRL 1945 Handbook. Entries cited in variants
of this alphabet: affirm, cast, hypo, inter, negat, option,
over, prep]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

3770. READ: Some Good Things About a Crowded 2M Band (mini-article)

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-07 20:10:05 UTC
From: rbellville@aol.com
Message-ID: <34l6mt$dbh@search01.news.aol.com>
Source record: 260522

SOME GOOD THINGS ABOUT A CROWDED 2M BAND

"... 2 meters is getting just like the CB band."

"... all the 'appliance' operators are on 2 meters."

Sound familiar? This was just a sampling of the criticism regarding the 2 meter ham
band spoken by a large portion of ham radio operators. Now that you can go down to
your local Radio Shack and pick up an inexpensive hand-held 2 meter FM transceiver,
its easier than ever to get on the air.

Question is, is this bad? Lets take the point of view for the moment that it is. More
operators means more active repeaters. Gone are the days when you could say
"N1NTE listening." and not be answered. Gone are the days that the repeater sits idle
without any users. Now its tied up all day long with everyone talking about all kinds of
things. Subjects that you know nothing about or never heard of. Watch out! If you listen
to these people too long you might learn something new.

Oh no! Its a bunch of kids using the repeater. Now we've got young blood in the hobby
and it'll never be the same again. They can't even spell CW! They're going to change
things, I know it. Now all you hear is this digital packet stuff screeching on all the
simplex frequencies. Who cares if it can pass more information along than CW. Its so
noisy!

But we have more repeater jammers now. When a community grows you tend to get
more "crime" than you use to. Who cares if the incidents per capita is lower than
before, where are we going to find enough hams to DF these losers?

OK, enough sarcasm. Let's look at 2 meters as a public resource. Its full of repeaters
and full of operators. Hmm, sound perfect for all kinds of public service - emergencies,

assistance, event handling, etc. No shortage of inexpensive equipment out there and
its easily obtainable. Sounds like an extremely valuable asset that gives ham radio a lot
a value to the un-informed public view.

Next, a good majority of the No-Code Techs start out here. What a excellent opportunity
to welcome these folks aboard and demonstrate your exquisite operating skills as role-
model ham radio operators. Most of them got their license because they are excited to
learn about radio. Teach them. Maybe you can even convince them to adopt the "CW
FOREVER!" motto and add them to the ranks of "real hams".

So you want to have along conversation with your friends without a lot of interruptions?
Gee, 220 MHz is always being called the "use it or lose it band", so use it. Get the
demand for 220 MHz equipment up and watch the manufacturers offer lots of new
equipment. Look what's starting to happen for 6 meters. In some areas, 440 MHz is
dead, in others try 1.2 GHz. It'll take a while for them newcomers to get up this high!
Start populating these bands or we'll regret it sooner than you think. What a shame if
the FCC had to allocate more frequencies because we were using them all up.

Try to look at the positive side of an issue and you can come up with lots of benefits.
Change isn't a bad thing. Life would be very boring if everything was status quo all the
time. Be an active part of the hobby and influence change. Push it in the direction that
would benefit the whole ham radio community not just a select group. But more than
anything - Enjoy your hobby and let others share in the fun.

3771. 2nd CFV: rec.antiques.radio+phono

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-07 20:12:45 UTC
From: rdippold@qualcomm.com
Message-ID: <rec.antiques.radio+phono-CFV2@uunet.uu.net>
Source record: 260546
Cross-posted to: news.announce.newgroups,news.groups,rec.antiques,rec.audio.tech,rec.radio.amateur.misc

LAST CALL FOR VOTES (of 2)
unmoderated group rec.antiques.radio+phono

Newsgroups line:
rec.antiques.radio+phono Audio devices and materials of yesteryear.

Votes must be received by 23:59:59 UTC, 20 September 1994.

After this CFV appears on news.announce.newgroups it will be sent to
the mailing list <boatanchors@gnu.ai.mit.edu>

This vote is being conducted by a neutral third party. For voting
questions only contact rdippold@qualcomm.com. For questions about the
proposed group contact Bill Robie <robie@umbc7.umbc.edu>

CHARTER

Discussion of the use, repair, and collecting of early standard-broadcast
radios, phonographs, and any other similarly-related items designed for home
entertainment sound receiving or sound reproduction.

This group is intended to be a forum for those with an interest
in sound-receiving and sound-reproduction equipment that was generally
manufactured prior to the widespread use of transistors. The group's
discussion, however, will not be strictly limited to vacuum-tube and
mechanical devices, and those with an interest in early transistor radios,
early televisions, and other such items that reflect pioneering audio
technology will be welcomed.

Exclusions:

Amateur radio equipment discussion will be directed to the existing amateur
radio newsgroups and to the boatanchors list. This is only done because
those groups present an established forum for people with an interest in
classic amateur radio equipment. Those classic amateur radio collectors who
also share an interest in early standard-broadcast equipment will fully
appreciate the desire to separate the two interests. Their valuable
expertise will, however, be most welcome in all forums.

Since the summer of 1993, there has been an ongoing discussion among
those interested in antique radios and phonographs (and other related
equipment and materials) about the possibility of forming this
newsgroup. That small core of enthusiasts has rapidly grown in
number, and now includes representatives of museums, technical
specialists, collectors, and novices with an inquisitiveness about
sound reproducing and receiving equipment of the past. With

enthusiasm for the preservation and enjoyment of these superb
expressions of human inventiveness steadily increasing, the time has
come to establish a forum through which knowledge of their history,
restoration, and use can be shared by experts and newcomers alike.
This proposal represents the essence of what an Internet newsgroup can
accomplish--it can produce a collective source of knowledge from which
useful information can be drawn for years into the future.
Bill Robie, August, 1994

HOW TO VOTE

Send MAIL to: voting@qualcomm.com
Just Replying should work if you are not reading this on a mailing list.

Your mail message should contain one of the following statements:
I vote YES on rec.antiques.radio+phono
I vote NO on rec.antiques.radio+phono

You may also ABSTAIN in place of YES/NO - this will not affect the outcome.
Anything else may be rejected by the automatic vote counting program. The
votetaker will respond to your received ballots with a personal acknowledge-
ment by mail - if you do not receive one within several days, try again.
It's your responsibility to make sure your vote is registered correctly.

One vote counted per person, no more than one per account. Addresses and
votes of all voters will be published in the final voting results list.

rec.antiques.radio+phono Bounce List - No need to revote

I spotted it! The quote should be "Because there's no bones in ice
cream" and was spoken by Curly Howard of The Three Stooges in the
episode entitled "You Nazty Spy" (Columbia, 1940).

Did I get it right?

73,
Dave, KZ1O

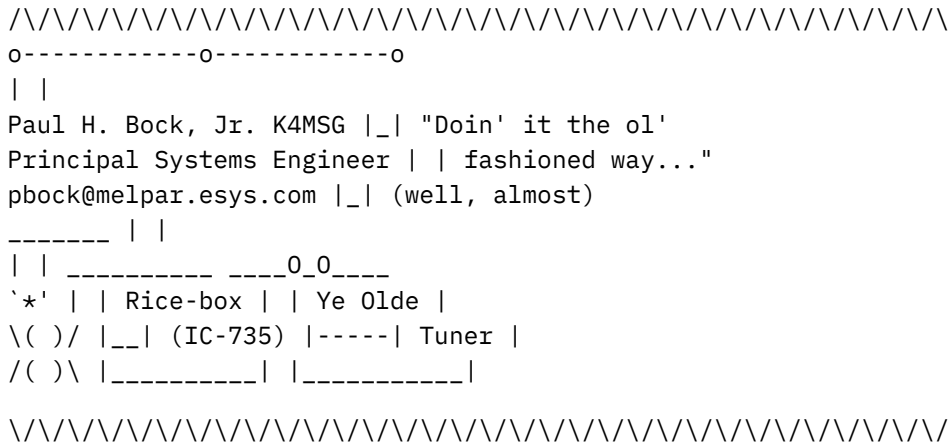
As a side note, when this alphabet first came out in the
late 1950's or early 1960's to replace the then-in-general-use
"ABLE-BAKER-CHARLIE, etc., C was COCOA and M was METRO. I
remember it because my Dad (who was a pilot) chided me that I'd
have to learn a new set of phonetics. Apparently, COCOA and
METRO didn't last long and CHARLIE and MIKE were re-hired... :-)



3775. Re: You dont do this on the air why do it on the net?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-07 22:02:00 UTC

Message-ID: <2E6DBA48@smtp>
Source record: 260524

Thank you. Thank you. Thank you. Thank you.
I have been trying to raise the fact that address lines are embedded, complicated and not suitable for humans, to no avail. Since I am not a computer(yet anyway), I have no way of figuring out the e-mail address of someone on usenet. Even Brian Battles of the ARRL said that it would be impossible to correct.
Impossible????
All one has to do is add their address line after their name, not very difficult is it?
After all, I am on a PC running Windows, on a huge Lan Manager network, via an SMTP gateway, not on a UNIX box connected to internet. I am certrainly not interested in deciphering:

ihnp4.ucsd.edu!agate!howland.reston.ans.net!EU.net!Germany.EU.net!news.dfn.de!n
news.coli.uni-sb.de!News.Saar.DE!hit.sb.sub.de!rmk@network.ucsd.edu

to reply to this person or whetever it is (I dont know what it is).

SO PLEASE, ADD YOUR ADDRESS LINE AFTER YOUR NAME AT THE END OF A MESSAGE.
THANKS A MILLION

From: novotny@nosc.mil
Message-ID: <1994Sep7.221714.9450@nosc.mil>
Source record: 260525

Lou NIgro (KW7H) wrote "No ZIA connection into San Diego, Yuma is the last repeater on Interstate 8." Almost, but not quite true. ECRA (East County Repeater Association) in San Diego DOES have a remote base on 449.175 mHz (- with a 88.5 Hz pl) on Monument Peak that is advertised to have a 2 meter link into ZIA. Activating the 2 meter link into ZIA is done by a series of touchtone commands that only dues paying members have. I'm not a member of ECRA, so I don't know how receptive they would be to activating the link for non-members.

Larry Boyd (larry.boyd@m-island.uu.holonet.net) wrote:

: When testing the different classes how many VE's and VEC's are
: needed for the different classes?

At least 3 VEs are needed at any testing session. The VEC is the
organization that certifies the VEs; there are (I think) about 8-10 VECs
in the USA--the ARRL is one, and there are several others as well.

At the last session I was at, there were about 10 VEs--lets you
have three in the room for the CW tests, and three in the room for the
written tests, as well as leaving them free for potty breaks, etc.

The FCC Class B limits were basically designed to keep the emissions
from a digital device from interfering with broadcast services (ie AM, FM, and
TV). Just because a computer is class B compliant doesn't mean that
it will cause zero interference. On the contrary any digital device
will make interference, if you get lucky you may be able to minimize the
interference with an off the shelf product. A completely bullet proof unit
will take extra filtering and shielding and probably some degradation of
some of the subsystems like video.

Caution! If a computer manufacturer bothered to machine holes and
create extra slots for venting he must have a reason. Blocking the
air flow on a computer could raise component temperatures above
the manufacturers ratings causing a premature failure.

Those holes and slots cost money, if we didn't need them we wouldn't
put them in.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 07/2330Z SEPTEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 07 SEPTEMBER AND FORECAST FOR 08 SEPTEMBER - 10 SEPTEMBER

1A. SOLAR SUMMARY
Activity: low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 92/37

GOES satellite data for 06 Sep
Daily Proton Fluence >1 MeV: 8.7E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 2.2E+06
X-ray background: B1.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
08 Sep 09 Sep 10 Sep
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 08 Sep: 92/37

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 06 Sep
Learmonth 24 3344 4444
Fredericksburg 20 14
Planetary 27 15

Observed Kp for 06 Sep: 1335 3322
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
08 Sep 30 Mostly active, with brief minor storm periods
possible.
09 Sep 25 Mostly active, with brief minor storm periods
possible.
10 Sep 20 Active
COMMENT: IPS Geomagnetic Warning 3 was issued on 4 September and is
current for interval 7-10 September.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Sep normal fair-normal poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Sep normal fair-normal poor-fair
09 Sep normal fair-normal poor-fair
10 Sep normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
07 Sep 28 near predicted monthly values

Predicted Monthly T-index for September: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
08 Sep 25 Near predicted monthly values
09 Sep 15 10 to 20% below predicted monthly values
10 Sep 25 Near predicted monthly values
COMMENT: IPS HF Communications Warning 2 was issued on 4 September
and is current for interval 7-10 September. The mid latitude
ionospheric response to current geomagnetic activity has not been as
severe as originally forecast. Depressed MUFs are now forecast for
tomorrow (9 Sep) only.

> There are call-backs on all bands. However, what you hear in the morning
> on 160, 80 and 40 is AM, whereas callbacks (on 80 and 40) are taken on
> an SSB transceiver.

I did tune around on 40 after the broadcast and heard the VK3 callback ok.
I assume that the VK2 callback is on the same freq (7146) as the broadcast.
I listened for a while on that (LSB) but heard nothing. Perhaps I should
rearrange my piece of wet string!

3784. Re: A Repeater on 147.555?!?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-08 00:55:40 UTC
From: leigh@rain.org
Message-ID: <leigh.778984718@coyote>
Source record: 260535

Thanks to all who replied to my orignal bulletin. I especially liked the comments of Jeff/NH6IL; low power FM simplex using high-gain antennas sharpens radio operating techniques.

I was surprised at the amount of responses to my rhetorical question as to "every ham having a right to own a repeater". While legally this is correct, the reality of Southern California with repeaters often wildly uncoordinated makes this a scary proposition.

Yes, I understand the ARRL OOs are not the FCC, but I still believe they should adhere to the Band Plan. When I posted the same message on Packet, I recieved a reply from an OO who sympathisized with the W6FP/147.555 repeater group. He informed me that they had applied for a conventional repeater pair from the local coordinating group, but were denied due to cronyism between the coordinating group and and a repeater owner on the pair they had applied for. The OO felt this justified the repeater group using two simplex freqs; I feel it does not. There are more than enough repeaters in Southern California, and some don't recieve all that much use.

Thanks again for the commentary and input; 'hope to catch all of you on 2 meter FM simplex or SSB someday. 73 from Santa Barbara DE KM6JE/Leigh.

3785. Re: PACTOR changeover timing

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-08 01:05:55 UTC
From: k9cw@prairienet.org
Message-ID: <34lo1j$kga@vixen.cso.uiuc.edu>
Source record: 260536

In a previous article, peterk@seanews.akita.com (Peter A. Klein) says:

>Does anyone know the minimum changeover time requirement for PACTOR and
>G-TOR?

I think that the Icom 745 should work OK. Short path PACTOR has a cycle time of 1250 ms. The ISS station sends a 960 ms packet and the IRS responds with a 120 ms control signal. The German PTC default for CS delay (the time between the end of the ISS transmission and the start of the CS signal) is 30 ms. If you add propagation delay, you have a delay that would seem to work with your 745. In PACTOR Long Path mode, the cycle time stretches to 1500 ms...

There might be other reasons PACTOR fails. Are you using any receiver filters that might be clipping the signal? If you are using AFSK, is the transmit audio level too high?

73, Drew

Message-ID: <Charles.R.Hohenstein.1-070994203512@mac16.debartolo.lab.nd.edu>
Source record: 260538

Will there be an update to the callsign servers anytime soon, or are they only updated on a yearly basis? I believe, for example, that the last update to callsign.cs.buffalo.edu 2000 occured in January. I'm not bitching, mind you--I simply wondered when to expect new info.

Yes - the callbacks are on 7146, same as the broadcast. Be aware though
that the HF callbacks are done by one person (the other one does the
VHF callbacks) so you may have to wait a bit. I think it's 160m, 80m,
40m and 30m in that order (but I may be wrong - it seems to depend upon
the whim of the announcer...).

My guess is, "not very". On 2m, you can buy a $200-300 HT, hit a repeater, and talk to dozens of people as clearly as talking over the telephone within 10 minutes of getting it home and opening the box, or perhaps even ON THE WAY HOME. I'd like to see someone do that on HF.

HF and VHF attract different people for different reasons. I'm not knocking HF, merely observing that it's not everyone's "cup of tea".

3791. > Are ordinary alkalines rechargeable?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-08 03:28:21 UTC
From: russek@netcom.com
Message-ID: <russekCvsKB9.Ky5@netcom.com>
Source record: 260543

I heard you guys argueing about alkaline rechargability and thought I'd help
out. You mentioned:
> I was in a Radio Shack the other day and I overheard a salesperson
> selling someone a battery charger, and he was clearly claiming that
> it could recharge alkaline batteries. He even sold them ordinary
> RS alkalines, so we're not talking about the newfangled
> "rechargeable alkalines" which can be recharged something like 25
> times.
Hehehe, I (unfortunatly) happen to be a Radio Shack "Sales Associate",
and yes we do, or I should say did carry a "Buddy L" Alkaline recharger.
Believe it or not, it does work! Here's the catch, you get maybe 3 recharges
out of the average alkaline, and it must be recharged when they are weak
(1.2V I believe) or it won't work. The concept is simple:

All batteries can be charged, including lithium, carbon, alkaline, silver
oxide, etc.
If you ever looked at a nicad closely you will ALLWAYS find vent holes
(even if you don't know where to look, THEY ARE THERE)
These holes are to allow gases to escape durring charging.
Well, you guessed it, Alkalines have no vent holes, hense they will leak
if charged with conventional chargers.
The way those "Alkaline chargers" work is they closely monitor the battery's
drain(amperage) on the charger, as soon as it jumps up(to a point at which
large voplumns of gas are emitted) it lowers the charge current. It goes
up and down in a cycle bringing the battery right up to the bubble point
and then drops it to allow the small amounts of gas to be released for the
next cycle. Naturally, it is impossible to COMPLETELY seal a battery, so
by slowing down the rate the gas escapes you can fit it through a smaller
hole.

Quick note here, no other radio shack employee in the world probably knows that.I actually
took one of these things home and monitored everything it did
through a cool meter I picked up at work that logs values to a computer.
Carefull what you believe from Radio Shack employees, we work commission and
some of us(not me) will say anything for a sale(that Buddy L Charger was $59)
By the way, it was discontinued.
One last note, the mall stores are the worst, they don't even get feed back
info from customers so thier knoledge base is small. Well, maybe it's not too
bad, I know a few good salesman(knoledgable) (sp?)
Well, Gotta run, it's too late. Got to work tomorow hehehehe.

!!END-DATA!!

NOTE: The Effective Sunspot Number for 06 SEP 94 was 28.0.
The Full Kp Indices for 06 SEP 94 are: 1+ 3+ 3- 5o 3+ 3- 2o 2-
The 3-Hr Ap Indices for 06 SEP 94 are: 5 18 11 46 18 12 9 7
Greater than 2 MeV Electron Fluence for 07 SEP is: 5.4E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Only minor B-class activity
was noted this period. The largest region visible on the disk,
Region 7773 (S08W31), continues its slow decay while Region
7776 (S08E16) continues to slowly grow. Also indicating slow
growth is Region 7774 (N11W22).

Solar activity forecast: solar activity is expected to be
low with Regions 7773 and 7776 showing the best chance of
C-class and possible M-class activity.

STD: Overall electron fluence at greater than 2 MeV was near-normal to moderate levels. Another full-disk Yohkoh x-ray image has been appended to this report.

The geomagnetic field has been at quiet to active levels for the past 24 hours. A period of minor to severe storm conditions was reached from 07/09-18Z. The GT 2 MeV electron flux reached high levels.

Geophysical activity forecast: the geomagnetic field is expected to be mostly unsettled to active for the next three days. Periods of storm conditions should be expected. Activity is in response to a favorably positioned coronal hole.

Event probabilities 08 sep-10 sep

Class M 15/15/15
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 08 sep-10 sep

A. Middle Latitudes
Active 30/25/25
Minor Storm 20/15/15
Major-Severe Storm 10/10/10

B. High Latitudes
Active 30/25/25
Minor Storm 25/20/20
Major-Severe Storm 15/15/10

HF propagation conditions were degraded today in response to increased levels of geomagnetic and auroral activity. Equatorward expansion of the auroral ovals resulted in greater signal degradation than normal for many middle-latitude night crossing circuits. Increased fading, absorption, and multipathing were observed. Similar degraded conditions are expected throughout the next 24 to 48 hours before signals should begin improving.

0628 0633 0637 C1.5 SF 7776 S07E41 III
1620 1624 1633 B2.2 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

SPECIAL INSERT: YOHKOH FULL-DISK X-RAY IMAGE

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them.
* If you are a new user, please print and review the FAQ articles and look at
the instructions in the news.announce.newusers newsgroup before posting any
articles. If you don't find the answer in the FAQ and you have tried
elsewhere, then you have "done your homework" and it is acceptable to ask
the question on the UseNet newsgroups. Along with your question, please
state where else you have looked for the answer so others also know that
you have done your homework.
* If you are an experienced user, please help by refraining from answering
frequently-asked questions on the newsgroup if they are already answered by
the FAQ articles. Instead, send e-mail to the user who asked the question.
(It will be helpful if you include the part of the FAQ that answers their
question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

Table of Contents
-----------------
Dates indicate last modification.
```

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (6/93)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Please Do Not Ask Questions of the Editors (8/94)
* Call for FAQ Editors (8/94)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (2/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.

Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Jack GF Hill W4PPT root@jackatak.raider.net(Brentwood, TN, USA)

Ian Kluft KD6EUI ikluft@oes.amdahl.com (Santa Clara, CA, USA)
Paul Schleck KD3FU pschleck@gonix.com (Omaha, NE, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Steve Watt KD6GGD steve@wattres.sj.ca.us (San Jose, CA, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

* Please Do Not Ask Questions of the Editors

We wish it wasn't necessary to say this. Please don't send questions to the editors (unless you are sending an answer with it as a submission for the FAQ.) The proper procedure for questions on UseNet is
1) Read the FAQ
2) if it isn't there, check other sources (see Part 2 of the FAQ for electronic sources including Mosaic/WWW)
3) post on the newsgroup

The Internet has become an atmoshpere where questions are asked of everyone as if they have an infinite amount of time to help. The volunteers who maintain the FAQ do not have time to answer questions. Some FAQ maintainers on other newsgroups have been led to believe that no good deed goes unpunished - let's avoid bringing the same end to this effort.

* Call for FAQ Editors

As with any volunteer effort, new volunteers are often needed. The previous paragraph may have already given a hint about this: we need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.

* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post

your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC

Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals

back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send
still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers)
in your local area. Look around and ask local hams. Search out local
radio clubs. As well, some people have volunteered to be an Elmer
over the Usenet. A list of UseNet Elmers and their e-mail addresses
is posted to the newsgroup monthly. If anyone wants to be an Elmer,
send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a
look around the FTP archives and e-mail servers listed in Part 2.
There's so much out there on UseNet, you'll find plenty of things
you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,
building your own receiver can be quite complicated; if you don't have
electronics experience, you may want to buy a receiver instead. Most
homebrew transmitters are QRP (transmit very low power). That's fine
for an experienced ham with a very good antenna, but a Novice ham will
just get frustrated. Your first rig, therefore should NOT be a home-
brew.

Antennas can be much simpler projects than the transceiver, though
some types are also quite involved. Most hams build their own anten-
nas for base station use and buy antennas for mobile (car) use. Most
beginner ham books describe how to build different types of antennas.
Order of difficulty, from easiest to more difficult, for some common
antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books
from many sources, including ARRL and several Hams, discuss antennas
in depth.

When building or even understanding antennas, it is good to know the
relationship between the antenna element length and the frequency or
wavelength it is designed for. An antenna performs best at multiples
of 1/4 of that wavelength, though 5/8 wave also has beneficial qualit-

ies. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (2/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--
```

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media including WWW, UseNet, electronic mail, the Internet, dialup BBS's and others. Various electronic information sources are summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* Mosaic, World-Wide Web, Gopher, and WAIS
A new generation of information retrieval tools exploded into great popularity on the Internet in 1993 and 1994. They are the gopher protocol, wide-area information server (WAIS) and World-Wide Web (WWW). They are indeed complete topics of discussion unto themselves which can be found, among other places, in the following newsgroups:

comp.archives
comp.infosystems.announce
comp.infosystems.gopher
comp.infosystems.wais
comp.infosystems.www

Please read those newsgroups if you have questions about the software or how to use it.

At the current rate of growth, we can never hope to list all the servers. We would like cooperation from people who assemble WWW servers to add references to other useful Ham Radio information available at other WWW, gopher, WAIS, and FTP sites. That way the FAQ can direct readers to servers that can reference more servers with more information than we can include on a periodic UseNet posting.

Some useful URLs (uniform resource locators) which can be used with WWW (Mosaic, Lynx, etc.) are as follows:

General Ham Radio Information:

Amateur Radio Virtual Library
http://buarc.bradley.edu/wwwvl-ham.html
Ham Radio FAQs & info: (The OSU server turns this into WWW hypertext)
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/top.html
file://rtfm.mit.edu/pub/usenet/radio/ham-radio
all radio FAQs & info:
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/top.html
wais://rtfm.mit.edu/usenet/radio
Federal Communications Commission:
http://www.fcc.gov/
http://www.fcc.gov/1/Private_Radio
North Carolina State HamRadio WWW Server:
http://www.acs.ncsu.edu/HamRadio

Yahoo's Ham Radio Index:
http://akebono.stanford.edu/yahoo/Entertainment/Hobbies_and_Crafts/Amateur_Radio/
EINet Galaxy's Ham Radio Page:
http://www.einet.net/galaxy/Leisure-and-Recreation/Amateur-Radio.html
O'Reilly's Whole Intrernet Catalog's Ham Radio Page:
http://nearnet.gnn.com/gnn/wic/hobbies.02.html (Eastern USA)
http://www.digital.com/gnn/wic/hobbies.02.html (Western USA)
http://bond.edu.au/gnn/wic/hobbies.02.html (Australia)
http://quasar.sba.dal.ca:2000/gnn/wic/hobbies.02.html (Eastern Canada)
http://www.wimsey.com/gnn/wic/hobbies.02.html (Western Canada)
http://www.Germany.EU.net/gnn/wic/hobbies.02.html (Germany)
http://www.ntt.jp/gnn/wic/hobbies.02.html (Japan)
http://www.elvis.msk.su/gnn/wic/hobbies.02.html (Russia)
http://src.doc.ic.ac.uk/gnn/wic/hobbies.02.html (UK)
University of Buffalo's FTP server:
file://ftp.cs.buffalo.edu/pub/ham-radio
Oakland University's FTP server:
file://oak.oakland.edu/pub/hamradio

Specialized Topics:

SAREX: Shuttle Amateur Radio Experiment
http://hypatia.gsfc.nasa.gov/sarex_mainpage.html
Morse Code Demo
http://macgwy-mac2.gsfc.nasa.gov/GARC/exp/morse.html

Although still very much works-in-progress, the last two URL's
are excellent examples of WWW servers with numerous references
to other resources.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There
are several newsgroups dealing with Amateur Radio and other aspects
of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/
AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.scanner Utility Radio above 30Mhz
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*).
It is also cross-posted to rec.answers (the archive for FAQs in the
rec.* newsgroups) and to news.answers (UseNet's general repository for
FAQs.) These should be the first places to look for new current
copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting
Amateur Radio in the USA. They have established an automated file
server which responds to information requests via electronic mail.
To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 386 PC at home with
over 40 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at ham-server@grafex.sbay.org. This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server seems to have more emphasis
on MS-DOS programs and binary files though there are many plain-text
articles as well.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)

NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Perry Rovers coordinates a fairly definitive list (formerly
maintained by Tom Czarnik) of anonymous FTP sites, their IP
IP numbers, time zones, general contents, and access policies
which he posts to several newsgroups, including comp.archives,
comp.sources.wanted and news.answers. It is itself available
via anonymous FTP (how about that?? :-) from (among other places)
rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has
installed the "archie" program on your machine and use it. Archie may
also be accessed by telnetting to one of many sites. The list
of archie sites is numerous and growing fast. For a current
list of sites, telnet to archie.sura.net (login "archie"), then
please use the one closest to you to conserve network bandwidth.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and
places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu:/pub/ham-radio
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - Contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info, Packet
FAQ, examination opportunities, information on various
regulations, information on commercial radios (i.e. GE or
Motorola), SSTV (slow-scan TV), HTs (handheld transceivers).
Recently, the rec.radio.amateur Working Group (rra-wg,
see below for more information about their mailing list)
has started to encourage archivers of radio modification
instructions to mirror them at this site. In this way,

maintainers may come and go but the collection of
mods will remain continuously available (and undergo
constant positive growth). This FAQ is updated monthly
here.
grivel.une.edu.au:/pub/ham-radio
Australian mirror of ftp.cs.buffalo.edu
nic.funet.fi:/pub/ham
This is one of the largest FTP sites in Europe and maybe the
most popular. /pub/ham/info contains a mirror of Buffalo.
Other topics available here include amiga, antenna, HF, packet,
satellite, scanners, program sources, VHF and others.
This site is also one of the article archives for the
rec.radio.info newsgroup.
ftp.uu.net:/networking/ka9q
A large FTP site in the USA - UUNET contains sources and
binaries for many different types of computers.
ftp.ucsd.edu:/ (site was down when we were looking for the new path)
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
vixen.cso.uiuc.edu:/pub/ham-radio
This site contains the HyperCard Hamstacks written by Diana
Carlson as well as ASCII readable ham radio question pools.
ftp.apple.com:/pub/ham-radio
Ham software and information, especially Macintosh software
rtfm.mit.edu:/pub/usenet/news.answers/radio/ham-radio
all participating FAQs and periodic informational postings are
archived here, including those from the rec.radio.* newsgroups
which can be found in pub/usenet/news.answers/radio.
Participating FAQs are automatically archived here when they
are posted on UseNet.
ftp.amdahl.com:/pub/radio/amateur
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)
world.std.com
The Ham Radio archive at this site has been moved to
oak.oakland.edu.
oak.oakland.edu:/pub/hamradio
oak.oakland.edu:/pub/hamradio/arrl
Mac, Amiga, Atari, PC files in their own subdirectories.
Also radio mods and an Internet mirror of the ARRL info
server.

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here
is that Netnews is far more prevalent than direct Internet hookups,
accurate name servers, smart mailers and routers, and of course,

telnet and FTP client services. What this means is that your trouble
may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line
and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If
this is the case, then you have no direct connection to the Internet
and thus cannot use real-time interactive services like FTP and
telnet.
* If you are at a college or university, your host (ie, the computer
you are logged onto) may be on the Bitnet network, which has an
email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host
have telnet and/or FTP client programs? (ie, if you type "ftp" or
"telnet" at your command prompt, do you get anything?) Many hosts,
particularly IBM mainframes not running Unix, do not support these
services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to
misconfigured connections and inaccurate host tables/name servers
(*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar
error, try telnetting via the IP number, a set of four 1-3-digit
numbers separated by periods (eg, 198.137.220.1). The exact IP
number for the site can be obtained via the nslookup utility, if
your computer supports it. (The FAQ does not print IP addresses any
more because they change so often.) Your system may not recognize
the "fully-qualified domain name" (like callsign.cs.buffalo.edu),
but it should ALWAYS recognize an IP number if their network is
reachable from yours.
* If you get "network unreachable" check with some more knowledgeable
users if your site is actually connected to the Internet. If it is,
a link in the network may be temporarily disconnected for maintenance
(or by accident.)
* In the case of telnetting to a non-default port (as in the case
with the callbook servers), if telnet <host> <port#> doesn't work,
but you can telnet to the default login port (ie, no qualifiers),
then the manner at which the port qualifier is entered may be
system dependent. Also, at many education sites, it is common
practice to block telnet connections above TCP socket 1000 or
so in a somewhat misguided attempt to block usage of
"recreational" TCP socket applications such as Multiple User
Dungeons (MUD's) or Internet Relay Chat (IRC). In most cases,
a polite word to the system administrators, pointing out
the worthwhile services available on sockets 2000 and 3000
will get telnet service unblocked, at least for those ports.
* Syntax for telnetting from different operating systems differ.
Some common command syntaxes are: (angle brackets are for
readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:

telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files
foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,

CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect vixen.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/extra-pool.txt
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews
feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to the mail list addresses at ucsd.edu. Since rec.radio.info is a moderated newsgroup, requests to post to it may be sent to Radio-Info but they will be mailed to the moderator, rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu under subdirectory mailarchives/{mail-list-name}. However, Radio-Info is not archived at UCSD because almost everything is either on one of the other lists or in the news.answers archives at rtfm.mit.edu (see also funic.funet.fi above).

To subscribe to rec.radio.shortwave, send email to listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP, login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder. The number is 203-666-0578. More information can be obtained from the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB HAM-server. Also see many of the FTP sites listed earlier in this section. There is now way to keep a list like this anywhere near up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
We know of online callsign servers for the USA, Canada and UK.

If you are at an Internet site you can connect using telnet to the following callbook server (covering the USA and Canada):
callsign.cs.buffalo.edu

There is also a general geographical name server at
martini.eecs.umich.edu

For the UK, you can use a WWW client to access the following URL:
http://www.mcc.ac.uk/htbin/callbook

The callbook server sits on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like

telnet callsign.cs.Buffalo.edu 2000

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,

separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The FCC "call sign hotline" at 717-337-1212 is available for those
who wish to listen to the call signs allocated in each group for each
district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
As of 1/94, a current copy can be found at ftp.cs.buffalo.edu in
the /pub/ham-radio directory.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
The largest collection of mods data that we know about is kept at
ftp.cs.buffalo.edu in the /pub/ham-radio/mods directory. The
maintainer of this archive strongly encourages all existing
archivers of mods to mirror their collections on this site.
in this way, maintainers will come and go, but the collection
of mods will remain stable and accessible.

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is a frequently-asked question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are

available from the ARRL e-mail file server (see above). They want direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones (this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However,

rec.aviation.misc is appropriate for CAP aviation discussions and for CAP radio information, these rec.radio.amateur.* groups are available. CAP-related files are also stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK, 10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter band. It was first conceived when propagation was poor on 10 meters, as a method to get more hams to use 10 meters. The past few years have been great for 10 meters worldwide. However, "the bands are closing down" again, and 10 meters will once again be limited more for local communications, except for sporadic band openings, until the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call sign, operator's name and location. Send the list to your numeric call sign or DX area manager (as shown below), with $5.00 U.S. new membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N8FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent required under age 17), be a US citizen or resident alien, possess a valid Amateur Radio license, possess a station capable of operating on MARS HF frequencies, and be able to operate the minimum amount of time for each quarter (12 hours for Army and Air Force; 18 hours for Navy-Marines). Novices must upgrade to Technician within 6 months, else be dropped from MARS. No-Code Techs can apply, provided

they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR
203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it through 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more often, they are announced by local radio bulletin boards. The local packet BBS will most likely have a monthly updated schedule for VE sessions. ARRL or W5YI can generally be called and asked for local VE sessions as well. Don't forget that you will need the following when you go in for an upgrade: a copy of your current Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a listing of VE exams indexed by state (and some overseas sites, usually at embassies and military bases) to the net every 6 weeks or so. The same list can be obtained from the ARRL e-mail server under the file EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There are other smaller VECs around the USA. ARRL includes their schedules when the info is available. The other VECs phone numbers are listed with the ARRL info so you may wish to give them a call to check their schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above, substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available because of any of several reasons. Either there are copyright restric-
tions, royalty fees, or the source just may not have done the work. Also, not everyone that has information has reliable UseNet access.

** I'd like to volunteer to help ham radio through electronic information services like those mentioned in this FAQ list. Where should I start?
This FAQ would not be complete without a reminder that useful resources on the net do not grow on trees, they are the work of many dedicated volunteers. The rec.radio.amateur.* newsgroups are very fortunate to have quite a number of such volunteers providing everything from FAQ lists to telnettable callsign servers. This doesn't mean, however, that there isn't room for more information and services from additional volunteers. One such service would be more detailed FAQ lists for the recently-
-created special-interest rec.radio.amateur.* newsgroups (such as those for antennas, homebrew electronics, equipment and ham radio in space) to supplement this general FAQ.

Recently an electronic mailing list for amateur radio FAQ maintainers, archive custodians, service providers, and other volunteers was set up. It is the rec.radio.amateur.* Working Group (rra-wg). Anyone with a sincere interest is welcome to subscribe by sending E-mail to rra-wg-request@amdahl.com. The readers of that forum would be more than happy to provide advice and guidance with regard to an existing information project, or even suggest a new one to fill a currently-unmet need.

3796. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
```

Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and

does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife
YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a

reference to the wavelength of a common Amateur frequency
band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to
hear. It's used as a "PL Tone." PL is "Private Line", a trademark
of Motorola for their implementation of CTCSS (Continuous Tone Coded
Squelch System). Basically, the transmitter sends the signal with
the Sub-Audible tone and the receiver only opens when it hears signals
with that tone. Signals without the proper tone are ignored. This
is useful for "closed" repeaters, or for repeaters on the same
frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone
Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS
probably means Dual Tone Squelch System and refers to the feature of
providing a predefined sequence of Touch Tone digits to open the
repeater for transmit. DTSS is an alternate method from CTCSS, which
provides a way to use a "closed" repeater even if your radio doesn't
do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to
your country. See the country-specific newsgroups in "the rec.radio.*
newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get
a license in your country. See also the ARRL e-mail server. (Details
are in Part 2.)

If you know of any location where this information is available
electronically, whether by an e-mail server, anonymous FTP, or a
contact person, please mail it to us so we can include it here. Send
it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)?
Editor's note (11/92): the regulations affecting this question are
being changed. Contact your local Volunteer Examiner (VE) and ask
about a VE 60-day pass. More details will be included in future
revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020,
Gettysburg, PA 17326. They will then send you a reciprocal permit
for alien amateur licensee (FCC Form 610-AL). You must be a citizen
of a country with which the United States has arrangements to grant
reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines apply:
* A reciprocal license is required in all foreign countries (that have a reciprocal operating agreement with the US), except Canada, where the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them which country you are going to visit and they will send you the info and an application form. Foreign hams can likewise request information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur license (ie, notarized copy), and fee if applicable (use a bank draft of a bank that does business in that country) to the appropriate licensing administration of the foreign country. Processing may take 30 to 90 days.
* If less than one month, you could try sending the application and pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment into their country without a license or permit. If you applied, but haven't received the permit yet, show the copy and your FCC license to the customs officer, however, the equipment may still be held at customs until your departure.
* Be sure to use only those frequencies covered by your FCC license which are also used in the foreign country, unless otherwise authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many books offer advice for the growing group of hams that cannot put up antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up something as long as it "is invisible" or "doesn't disturb your neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief via PRB-1. Meet with the local government and seek an informal compromise. It is possible to win in court...but it's expensive and time consuming.
* If you are restricted by "covenants" attached to the deed of your home, your options are severely limited. Covenants are considered to be private, voluntary contracts between individuals and are outside of the intended application of PRB-1. In many cases, you can petition the Homeowner's Association for an exception. Sometimes you can win in court on the basis that other violations of the covenants by others without action taken constitutes abandonment of the agreement.

* For further information, contact the General Consel's office of the ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a complete list. There are also books on the subject available from ARRL.
* If cable TV is an underground feed, look for central distribution box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is disconnected and you use rabbit ears instead. It could be the cable company's problem!
* Calling the cable company may get results, since they are also responsible for RF leakage from their equipment. However, they are very often obstinate. Good luck! Try some or all of these suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency, and characteristics.
2. Bring it to the cable company's attention in writing, preferably addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving the problem. Try to work it out with someone technically knowledgeable.
4. Do mention your "licensed radio system", but try not to be too specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various aspects of electromagnetic interference. The filenames start with "EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI), EMI-AUDIO (interference to audio devices), etc.

** Did you know that you can get college credit for being a ham?
It's true! You can receive up to 14 credits in electronics and engineering thru placement tests for CLEP (College Level Entrance Placement) exams and DANTES (Defense Activity for Non-Traditional Educational Support) exams if you have an Advanced or Extra class Amateur license. For more information, ask your campus education office or (for DANTES) your military education office.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165
K6MF 145.585 7.165 3.840

W5RRR 146.64 28.495 21.350 14.280 7.227 3.850
W6FXN (temporarily out of service - looking for new frequency)
KA9SZX 146.88 426.25
K4GCC 146.94
WA4VME 145.17
W6TRW 145.32

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you

check the box to change your callsign, YOU WILL GET A NEW CALLSIGN, even if all you wanted was to supply a new address; if you want to keep your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur

Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112 (10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW

and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

Get yourself a copy of "Hams on Usenet" list, which include most active participants of the rec.radio.amateur.* hierarchy. I see no point of including your .sig in every post in a heated debate, it is just a waste of bandwidth.

However, if someone makes a one time request (and thus not yet in the HoN-list) and expect a reply by e-mail, then I think that it is polite to append a .sig.

Senator Barry Goldwater's K7UGA call, will be used for a special event
station on Saturday, September 17, 1994, in coordination with F.A.R.E.,
The Family Amateur Radio Event in Scottsdale, Arizona. This will be a
massive event with the Sheriff of Maricopa County speaking at 11:00am,
and even the department's helicopter landing and on display! The event
station will be operating, mostly on 20 meters, from 16:00utc to 21:00utc.
A QSL card will be sent automatically for all QSO's.

Hi:

I've got a friend interested in learning the code and would like to know a good morse trainer that he may be able to get off the Internet. If you have successfully used any of these programs to both "learn" the code and get your speed up please let me know.
The program can be for a PC or a MAC.

Thanks and 73,
Kevin, kj4qf

You need to type 'telnet callsign.cs.buffalo.edu 2000' instead of FTP,
since you will not be transferring any files.

Also, don't miss the four-part series in QST magazine called "Exploring
the Internet" from Sept - Dec.

I hate to bring up the subject again, but I haven't heard any
discussion on what NYS is doing. Is there any news?

73,
Steve

Steve,

A friend of mine received a letter from the DMV stating that
all the applications for the ham plates will be processed by
the end of September. My plates have been on order since March,
but the only thing I personally heard when I called the DMV special
plates division was that my plates were being processed and that
was in the beginning of August.

The above alphabet was the official US military, or at least
US Navy, alphabet in use at the time of the changeover to the
current NATO alphabet now used by the military. I learned it
my first year in 1955, and then immediately in the latter
part of 1955 had to learn the new version which is still used.
(That new NATO version used ALFA and not ALPHA.)

Incidently, william, x-ray, yoke, and zebra lived on, and may
still be in use, in the Navy as classifications for the various
classes of damage control readiness on ships on the theory,
I guess, that the condition was a term and not a phonetic
abbreviation. Why rewrite all those manuals? Then again, they
never did worry about issuing new instructions. Maybe it was
so the old timers would have something to reminisce about, like
CW.

Questions whose answers are rendered incorrect by recent changes in
FCC rulings are supposedly eliminated from the active question pool by
the VEC / VEs. If you find such a question remaining in -your- test,
flag it, and bring it to the VE's attention.

The question pools are updated periodically by a panel of volunteers,
acting with input from the general Amateur population. They are not
made "official" until after significant FCC and public interaction.
Questions whose answers are no longer correct are to be removed from
the -local- question pool.

Good luck with the test!

Heh! You may also have been suffering from Attention Deficit Syndrome.
All the amateur radio magazines have been mentioning the need to
use the new 610 form (initial month for its use was June, as I
remember it) several months in advance of that date.

If you had been a member of ARRL they sent the new form out
unsolicited.

>Thanks for the help.
>Larry Boyd
>larry.boyd@m-island.uu.holonet.net

only 1 VEC -- and that's the Volunteer Examiner Coordinator...they won't directly administer the exam.

You need 3 volunteer examiners that have scheduled an exam session with the VEC to administer the test.

General and Advanced VEs can administer elements 1A, 2, 3A exams only.

Extra VEs can administer all exam elements.

A team liasion is the point of contact between the exam team and the VEC. (that may be what you were thinking of with the "1 general VEC"..above).

There's something like a dozen VECs around the country -- see the headings on Bart Jahnke's recently posted exam schedule for names and addresses. The big ones are ARRL and W5YI (not sure who #3 is now).

I saw a photo of a wouff hong in last month's QST (p.13) and was wondering if anyone had a parts list, construction specifications, and alignment instructions for someone who might be interested in building this instrument. I don't recall seeing any QST articles on homebrewing wouff hongs, nor have I come across any kits in the advertising section. This amazes me as no radio club should be without one...

The story used to pass around our radio club at Maryland about the ham
who was up on his tower doing work on the 432 antennas when somebody
down in the shack flipped on the 432 rig and 1 kW amp, and sent a CQ.

Maybe some other UMers reading this will be able to verify the story.
The man went blind from the RF. Granted, 432 is considerably more
energetic than is 144 MHz, but it could still, conceivably, happen at
144.

A little credit ought to also be shared with the Scotsman who designed the steam engine for Maxim's plane (didn't he call it the "Enormity"?). That fellow's name was Roberts, and he later emmigrated to America, where he designed an built 2-cycle boat motors--a derivation of which powered many of the first "homebuilt" airplanes in North America.

Bill

From the Trenton NJ area down to Philadelphia, try W3SK, on 145.25 MHz. This is the Penn Wireless Association repeater; guests are always welcome, and the range is good for someone using only 5 watts.

**********************************************************************
* University and School Amateur Radio Club List Version .04b *
**********************************************************************

September 8,1994

Welcome to the University and School Amateur Radio Club list. The
purpose of this list is to provide information about amateur radio
clubs at schools and universities. The current editor of this list
is...
Jeffrey Luszcz N2TIQ
President Cornell Amateur Radio Club W2CXM
jrl2@cornell.edu

This is the Beta version of this list so give me some feedback
on what you like and dislike about the data format and general
presentation.

This list will be availible for ftp from the following servers:

Also I will be posting this list once every two months onto the
following newsgroups:

rec.radio.amateur.misc
rec.radio.amateur.info

!!!IMPORTANT!!!
If you do NOT want your club's information presented here
then please inform me of this wish through email.
!!!IMPORTANT!!!

The current data format for submitting club information is....
--------
SCHOOL:
NAME:
ADDRESS:
CLUB OFFICERS
REPEATERS:
CLUB STATION:
STATION TELE#:
ORGANIZATIONS:
YEAR STARTED:
NUMBER OF MEMBERS:
BANDS ACTIVE:
E-MAIL ADDRESSES:
HISTORY
---------
```

If everyone follows this form it makes it easier to edit and
maintain the list. I see this format changing as the list grows
and new concerns become raised. Please address your email to me
as follows FAQ -(name of school). For example...

Subject: FAQ - Cornell University

This makes it easy for me to move the mail around and put it in
the right folders. I am working on getting this information into
a datbase which will let me change the FAQ around easier and put
it in alphabetical order. Watch this space.

DISCLAIMER:
Feel free to copy and disperse this list freely as long as it
remains in its original format. If you do not want your clubs
information in this list then email the list owner and tell him so.

Also...
I am unable to provide any other information regarding college clubs
other than what appears on the list. Either the organization has
requested that it be kept confidential, or I just don't know. If
you do find out, please direct such information to my submission
address above so that others may benefit from it.

HF bands, 2 meter and 440 (some sat work)
E-MAIL ADDRESSES:
general membership: W6BB@violet.berkeley.edu
officers/board: hams@violet.berkeley.edu

HISTORY
I worked on this last year. Essentially, we were formed
in 1914 as one of the first stations on the west coast.
We started DX receiving experiments at this time, and
soon established skeds with the University of Washington
and a few other schools. Our first call was 6BB and dates
back to at least 1920. I think oneof our members was the
first woman to get a commercial radiotelephone operators
license in 1924. Early on we were also connected withthe
commercial station here at Cal, and did early broadcasts
from football games, alumni dinners, etc. Club fell into
decline in the1930's, but was revived after the war,
and has followed typical boomand bust cycles since.

nuars-request@w9bgx.nuars.nwu.edu (LISTSERVER)

HISTORY
The Northwestern Amateur Radio Society dates back until late
40s or early 50s. It has been affiliated with the McCormick
school of Technology and the department of Electrical
Engineering since its inception. The club has achieved many
awards over the years, including one of the very early 5-band
DXCC's.

In 1991 a storm took down our main tower and antenna, and the
shack had fallen into disrepair. However, in 1992 Drs. Allen
Taflove and Alan Sahakian took over the faculty advisor
position, and launched an effort to bring the station back on
the air. In the summer of 1992 a new tower was erected at a
better rooftop spot than before at a cost of over $10,000, and
faculty and student members together cleaned and renovated the
shack, and the old transceiver equipment was replaced. We
also pulled in Ethernet cabling for Internet, and got a

computer (w9bgx.nuars.nwu.edu).

We are currently looking into holding a course in the
Department of Electrical Engineering which will use the
resources of the Amateur Radio club, and hope it will increase
student participation.

REPEATERS:
see below
CLUB STATION:
Station 1 - Philadelphia (main campus)

Kenwood TS-940S, Alpha 76A, Icom 275H, Icom 375A, Icom 471A, PK-232,
80286,Azden PCS4000, power supplies, headsets, mics, Vibroplex
iambic, keyer,KLM KT-34A @100', Cushcraft R5 @ 60', 40m dipole @ 60',
KLM 2m/440 OSCAR,yagis, Diamond X200 @ 100', various other VHF and
UHF antennas, one tower on roof - top of tower is at 100', and all
of the usual accessories.

Station is in the engineering building on the 2nd floor. It's been
in the same room since 1924.

Station 2 - Valley Forge

Kenwood TS-530SP (soon to upgrade to TS-850), Dentron Clipperton-L
linear,Kenwood TM-742A 2/440/6m, Icom 271H, 80286, Telrex 5-el
tribander @ 40',3-element 40m monobander @ 70', Mosley TS-33 @ 40',
40m dipole @ 40',75m dipole @ 45', Diamond U2000, long-boom VHF/UHF
yagis, Hustler 2m G6,other VHF and UHF antennas, 5 towers total.

This station is on top of Mt. Misery at the U of P Microwave
Research Center. We go out to this station on weekends, for
field day, etc. It used to be a Nike Missle tracking station
back in the cold war days and now Penn uses it as a research
center. Great location - the highest point in the Philadelphia area.

Linked UHF Repeater System

Main site: Mt. Misery, Valley Forge, PA. 443.8+, 750'ASL, 2.6kW ERP
Phil site: Penncampus on top of high rise, 440' ASL, receive-only

Eagles Peak: Lebanon county, PA 442.400+, 1420' ASL, 800 watts ERP
6m remote: Mt. Misery, Valley Forge, PA 52.525 700' ASL, 200 W ERP
Addtional sites will be going up this spring/summer.

Co-sponsored repeaters

These two repeaters are on Penn's campus on High Rise North. We co-sponsor the repeaters with the clubs listed:

146.685- Holmesburg ARC 440' ASL, 800 watts ERP, two remote receivers
442.700+ NEAR-FAR ARC 440' ASL, 700 watts ERP

HISTORY
The MTSU club has been around since at least the 1960s, first as a trusteeship of the Dept. of Industrial Studies, and now under the Dept. of Computer Science. Membership has been small because the historic mission of the University was that of a teacher's college (thankfully that's changing). The Raider Amateur Radio Club is a key player in the packet radio field, and its members provide part of the core support in a project to bring high-speed (56k bps and up) packet connectivity to the entire state of Tennessee, from Mountain City to Memphis.

HISTORY
The club has been around for many years. The original
club was W0YI. It was founded over 75 years ago. The
W0YI club call is still maintained here at ISU by one
of our faculty members.

Our club has approximately 20 members who are somewhat
active. There are many more hams here at ISU, but many
of them are too busy with their studies and other clubs
to become involved with the CARC. We are always in
search of new membership.

Our members can usually be found on 2meters or 70cm.
At this point in time, there is very little HF activity
in the club.
Our club has been involved at ISU for many years. We have
meetings several times per month. Every spring, we set up
an open house display and help with communications for the
annual VEISHEA celebration, which is the largest student-run
event of its kind in the United States. We provide

communications for the VEISHEA parade, calling tow trucks,
ambulances, and the police if the need arises.
It is best for new prospective members or people
interested in the club to call me or Clyde Walter at
the numbers above. I am only at ISU during the Fall and
Spring semesters, while Clyde is a professor who is here
year around if the need arises to contact the club in the
summer months.

HISTORY

We have a club call W0QEV that has been ours at least since 1947 which is the oldest log that we can find. The league claims that we have been affiliated with them since 1949 which makes us one of the older if not oldest club station in the zero call region. This far back though and nobody really knows. Someday we will have to search though old call books from just after the war to see just when that call appears.

The club started as part of the department of electrical engineering here. It became a student union organization around a decade ago and as a result has a steady source of funds. As far as membership, if only that was as steady as funding. The club has students, graduate students, professors, university staff and even alumni. Probably around 20 members but only half that many are easy to get a hold of. There are always to few undergrads!

An addendum to the above. After the war st. louis became part of the zero district as opposed to the old nine district. We have reason to believe that the club was around even before the war, but don't know under which call or how we can research this. The ARRL doesn't know and the fcc doesn't even bother with this type of stuff.

W2SZ sports its own Usenet Newsgroup. It's rpi.union.ham-radio.
Some off campus systems may not be able get it.
HISTORY

W2SZ was originally created as 2SZ by the Troy YMCA around 1910. It was turned over to Rensselaer Polytechnic Institute in 1917 where it has been providing services to its members and the community ever since.

The station provides Amateurs with an opportunity to keep in contact with friends at home as well as providing for the learning of radio and basic electronics. The station also provides a friendly and relaxed atmosphere where members can come to get away from the stress of classes and work.

W2SZ, known to members are Zed, is a friendly group of people that are willing to share their knowledge and help those who have an interest in ham radio to get, or advance, their license. In addition they are willing to share their knowledge in the proper maintenance and operation of both club and personal equipment.

The club currently consists of about 30 members and is located at Six Sunset Terrace, Troy, NY. It also has contact with many of the past members who have long since graduated from RPI, or community members who live in the Troy area. It provides the members with many contacts, and also provides the community with a viable method of communication through the repeaters that the club has. In addition to day to day communications, W2SZ also offers lines of communication during periods of crisis. Examples of the Club's community involvement were during the San Francisco earthquake, and during Operation Desert Storm.

E-MAIL ADDRESSES:
HISTORY
Oldest license found - 5YM - dated 6/4/20, but there is anecdotal
evidence that we may have been licensed in 1914. The station was
active in the early '20s prior to the opening of KFMQ, the U of A's
first broadcast station. Logs have been found for the '32-'34 period
when the station (*W*5YM) was active on 'phone using a Class B
modulation amplifier built as a class project. Loy Barton, inventor
of Class B, was a graduate and faculty member of the U of A.
Haven't found any relics from '34 - '49. 1949 we were granted
W5JNI and our station was in the then-Business Admin building.
We suspect the trustee knew nothing of the previous station as
he was not in engineering. We returned to W5YM in 1952 and the
club has been going strong pretty much ever since.

3826. repeater database

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-08 17:50:10 UTC
From: jackson@longlast.cs.nyu.edu
Message-ID: <34nisi$5ui@thecourier.cims.nyu.edu>
Source record: 260472

is it me or did the repeater database creators drop off
the face of the earth? All of the mosaic forms interfaces
to the database seem fine, but I can't FTP the entire
file from anywhere. mipg.upenn.edu is gone, and Lou
Williams, whose name appears all over the pages as the
maintainer is no longer known at ncsu.

Perhaps someone here can tell me where to FTP the entire
file from?

Many thanks..

Self followup. I found the database. I poked through
upenn's localhosts file and found that while mipg.upenn.edu
doesn't exist anymore, mipgsun.mipg.upenn.edu does.

It's under pub/yee as rptr010.Z as purported on the Mosaic
screens. If there are any maintainers watching, here's
your chance to update your screens.

3829. Re: 2m/440 repeaters in the I-95 corridor

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-08 18:43:19 UTC
From: jackson@longlast.cs.nyu.edu
Message-ID: <34nm07$6hb@thecourier.cims.nyu.edu>
Source record: 260475

New Jersey is confused. I've lived there forever.
There are two 95's. First is the non-toll road from
Route 1 in Lawrenceville to the Scudder(s) Falls Bride,
and I paren the 's' becuase two signs within a quarter
mile of each other differ in their spelling (check it
out), and second is the Turnpike. Those of us from Jersey
generally call the non-toll road 95 and the turnpike, well,
"the turnpike". It's because the 95 corridor really runs
from Maine to Florida and those six miles don't count.

3831. AOS/LOS Lines for repeaters while mobile?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-08 19:30:18 UTC
From: jackson@longlast.cs.nyu.edu
Message-ID: <34nooa$771@thecourier.cims.nyu.edu>
Source record: 260428

I would love to see a variation of satellite tracking
software for mobile users of repeaters.

Start with something like the CD-ROM version of AutoMap--
lots of nice roadway details in there. Load the lats/longs/erps
of open repeaters and necessary details about your roving
shack. The repeaters show up as marks on the map,
color coded by band. Then enter your planned route. As
the point representing your vehicle travels the route,
the computer will show LOS lines from you to the repeater
and repeater footprints only while you can hit the repeater.

Dashed LOS lines should extend between linked repeaters and
thus all active footprints should be shown. This would be similar
to showing LOS lines and satellite footprints in single
and CVIS modes, respectively.

Then, instead of scanning for AOS and LOS times, the scan
should result in lats/longs for your vehicle's position, freq
data and perhaps the nearest intersection complete with town
and state names.

Of course, does AutoMap have elevation information?

Pointers? Comments? Laughter? If you've never looked at
satellite tracking software before and can't visualize what
I'm talking about, take a look at PCTrak and save the next
set of keps that pop up around here somewhere.

To all radio amateurs

SB DX ARL ARLD056
ARLD056 DX news

The items in this week's bulletin are courtesy of Steve, W9NUF, Tedd, KB8NW, the Ohio/Penn DX Bulletin, Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, Mako, JF2RZJ, Rasti, HB9IIL, ZB2IB and VQ9QM. Thanks.

RWANDA. Chris, 9X/F5PGP, has been spotted on 14195 kHz at 2030z. QSL via F5PYI.

EUROPA. FR5HG/E has been very active on 7005 kHz around 0300z. QSL via F6FNU.

GUINEA. Dragan, 3XY0A, is spotted on CW and SSB frequently. QSL to PO Box 160, 11070 Novi Beograd, Yugoslavia.

ZAIRE. Gus, 9Q5TE, has returned to Zaire and is active again. QSL via SM0BJF. G3MRC/9Q5 has been worked in 20 meter CW around 2200z.

MONGOLIA. JT1CS has been very active this past week on 20 meter CW and RTTY between 1230 and 1430z. QSL to Bat Erdene, Box 125, Ulan Bator 20, Mongolia.

CHAGOS. VQ9QM says he will be active on 160 meters Sunday evenings. No specific times or frequencies were given, but last season he was on 1827 kHz and listening around 1833 kHz at about East coast sunset. VQ9TP continues to be active, frequently on 18079 kHz between 1330 and 1430z. QSL via N5TP.

SINGAPORE. The S61 special prefix honoring the IARU Conference is in use through September 12.

FIJI AND WESTERN SAMOA. Mako, JF2RZJ, reports that his group will fly to 5W land by way of 3D2, Fiji. They plan to be active from 3D2 from September 9 to 11 and again from the 15th to the 17th. They should be active from 5W September 11th through the 14th, instead of

the 9th to the 14th as first announced. Their 3D2 callsigns have not been issued, but look for JA2FBY, JF2GYH, JF2RZJ and JH2ABL signing 5W0BY, 5W0HK, 5W0JA and 5W0BL, respectively. Activity is expected on all bands, CW, SSB and RTTY. QSL to their CBA.

MARIANAS. Kunihiko Kokal, JA6CNL, will be active as KH0/KR4VN from September 10 to 13, on CW and SSB. Look for his CW on 10102, 18070, 24895 and 25 kHz up on the other bands. For SSB, try 7080, 14195, 18150, 21295, 24950 and 28495 kHz. QSL via JA6CNL, PO Box 11, Yahata, Kitakyushu, 805 Japan, or via the JARL Bureau.

ARUBA. Rasti, HB9IIL, will be in Aruba from September 16 to 23. He plans to operate as P40RS and/or P4/HB9IIL mainly on 15 and 20 meter SSB, during local evening hours. QSL via the bureau or direct with SASE to PO Box 23, 1015 Lausanne 15, Switzerland.

BELGIUM. Stations from are begun using the ''OS'' prefix to celebrate the 50th anniversary of the liberation of Belgium. They will use the ''OS'' prefix until December 31st. Also, look for special event stations OO50USA, OQ50USA, OR50USA and OS50USA on September 24 and 25.

GIBRALTAR. ZB2 stations will be using the special prefix ZG2 in celebration of Gibraltar National Day until September 12.

PACIFIC DXPEDITIONS. Teo, DJ1RL, and Harry, DL6NA, will be active from several spots in the Pacific. They plan to sign their home call portable from the following locations:

Hawaiian Islands, KH6 - From October 5 to 9. Nauru Islands, C21 - October 10 to 17. Fiji Islands, as 3D2FT - October 17 to 19. Niue Islands, ZK2 - October 19 to 22. French Polynesia, FO - October 22 to 28. Activity will be on the normal DX frequencies. Teo will be active mainly on CW while Harry will be handling the SSB chores. DJ1RL will be especially active on 80 and 160 meters. Look for him on 1827/1832 kHz for top band QSOs. QSL via their home calls or the DARC bureau.

ANDAMAN ISLANDS. VU2SMN says that he will conduct an operation from the Andamans at the end of October 1994. There are no further details or info available as of this time.

UGANDA. Paul, WF5T, will be active as 5X1XT from November 1 to 31. Activity will be on 80 through 10 meters CW and RTTY. QSL to his CBA.

: Well, admittedly I become easily confused but isn't it that General VE
: do what they did before the Novice program was rolled into the VE
: program: 1A and 2?

: Kristin (WX9T)

It used to be that one General class licensee was all that was needed to
administer a Novice exam. Then it was two. Now that its all rolled into
the VE program, 3 examiners are needed at all testing sessions for all
license classes.

Cross-posted to: rec.radio.amateur.misc,comp.ai,comp.bbs.misc

CHEAPEST MAG SUB AGENCY - SHIPS WORLDWIDE+FREE 1yrSUB
>>> THIS IS BEING POSTED AS AN INFORMATION SERVICE TO INFORM PEOPLE OF THE AVAILABLITY OF THIS INFORMATIONAL RESOURCE: MAGAZINE SUBSCRIPTIONS. I OBTAIN NO BENEFIT FROM POSTING THIS MESSAGE OTHER THAN THE SATISFACTION OF HELPING OTHERS SAVE MONEY AND DIRECTING THEM TO A USEFUL CLUB.
>>> My name is Annette Dove and I recently started using a magazine subscription club in the USA that has a FREE 1 yr. magazine subscription deal with your first paid order- and I have been very pleased with them. They guarantee to beat all their competitors' prices. Sometimes they are less than half of the next best deal I have been able to find and other times, just a little cheaper - but I have never found a lower rate yet. They assured me that if I ever do, they will beat it.
>>> I started using them when I was in the USA and now I go to school in Finland and they help me here, too. >>>
They have a deal where you can get a free 1 yr. sub to a new magazine from a special list of over 275 popular titles published in the USA. They will give you this free 1 yr. sub when you place your first paid order with them to a renewal or new subscription to any of the over 1,500 different popular titles they sell.
>>> They can arrange delivery to virtually any country and I think they have clients in around 35 or 36 countries now. Outside the USA there is a charge for foreign postage and handling (on both paid and freebie subs) that varies from magazine to magazine. I have found their staff to be very friendly and courteous. They even helped me with an address change when I moved from one country to another.
>>> The owner thinks of his service as a "club" and his clients as "members" (even though there is no extra fee to become a member - your first purchase automatically makes you a member) and he is real picky about who he accepts as a new member. When he sets you up as a new member, he himself calls you personally on the phone to explain how he works his deal, or sometimes he has one of his assistants call. He is kind of quirky sometimes - he insists on setting up new members by phone so he can say hi to everyone (I sure wouldn't want to have his phone bills!), but you can place future orders (after your first order) via E-mail.
>>> He has some really friendly ng ladies working for him, who seem to know just as much as he does about this magazine stuff. If you live overseas, he will even call you there, as long as you are interested, but I think he still makes

all his overseas calls on the weekends, I guess cause the long distance rates are cheaper then.
>> He only likes to take new members from referrals from satisfied existing members and he does virtually no advertising- so you can email me and I will forward your message on to him as a referral. When I got set-up, they had a 2-3 week waiting list for new members to be called back so that they could join up. (Once you are an existing member, they help you immediately when you call.) I think they are able to get back to prospective new members the same day or within a few days now, as they have increased their staff. I am not sure about this.....but if you email me, I will forward your info to them right away.
>> They will send you some FREE info. via E-mail (the short version (around 40K) of their catalogue, or if you request it the DELUXE LONG VERSION (around 300K-big and juicey) !)...if you fill out the form below.
>> They then send you email that outlines how his club works and the list of free choices that you can choose from, as well as the entire list of what he sells; and then they will give you a quick (3-5 minute) friendly, no-pressure no-obligation call to explain everything to you personally and answer all your questions. >>
Once you get in, you'll love them. I do. For more info, just email me and I will forward you message to them. Please fill out the below form and email it to me at:

Motorola radio amateurs around the world will be celebrating the 66th
birthday of Motorola in September by operating special event stations.
Locations participating will be Arizona, Illinois, Texas, Florida, Canada,
Singapore, Indonesia, France, Italy, Israel, Japan, and Hong Kong.
Additions and callsigns will be announced on the air. Date/Time Period:
25 September 1994 / 0000-2400Z. Some DX operations will be extended to
allow for propagation. Operations will be in the General Class portion of
the amateur radio bands. All QSL's should be directed to P.O. Box 28246,
Tempe, AZ, 85285. Send a 9" x 12" SASE with sufficient return postage
($0.52 domestic, 2 or 3 IRC's DX).

SETIQuest is a new quarterly print/electronic mail (E-mail) periodical containing news, technical information, and tutorials devoted to bioastronomy and its subset, SETI (Search for Extraterrestrial Intelligence).

SETIQuest is published for professionals, serious amateur astronomers, and individuals curious about this fascinating field of observation. SETIQuest fills the need for a specialized astronomical publication devoted exclusively to the on-going search for evidence of life in the Universe. Such evidence could be intentional or inadvertent signals of other civilizations. Such evidence could be found in spectral signatures of biological activity on extrasolar planets or in the interstellar medium.

SETIQuest is written and edited for the scientifically literate individual taking part in the progress of our technological civilization, with articles by amateur and professional scientists. SETIQuest includes information about hands-on observational programs that can be carried out by individuals and groups of amateur astronomers at radio and optical wavelengths.

SETIQuest is filled with articles covering topics such as:

* Tutorials about bioastronomy and SETI
* Microwave or optical SETI as practiced by amateurs
* "Do-it-yourself" participation in bioastronomy and SETI activities
* Book reviews
* Regular commentary on issues relevant to SETI and bioastronomy:

SETI and the political milieu

Philosophical issues regarding the prospects of success and failure in the search

SETI as a parable of science versus pseudo science

Publications Watch: Summaries of recent scientific/general publications relevant to SETI

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z SEPTEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 SEPTEMBER AND FORECAST FOR 09 SEPTEMBER - 11 SEPTEMBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 89/33

GOES satellite data for 07 Sep
Daily Proton Fluence >1 MeV: 1.9E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 5.4E+07
X-ray background: A8.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Sep 10 Sep 11 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Sep: 87/30

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 07 Sep
Learmonth 19 --44 3333
Fredericksburg 29 25
Planetary 30 28

Observed Kp for 07 Sep: 3445 5344
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
09 Sep 20 Unsettled to active
10 Sep 20 Unsettled to active
11 Sep 15 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 3 was issued on 4 September and is
current for interval 7-10 September. The current magnetic activity
is not as severe as was originally forecast for mid latitudes. High
latitude areas have experienced storm conditions, however.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Sep normal fair-normal poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Sep normal fair-normal poor-fair
10 Sep normal fair-normal poor-fair
11 Sep normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
08 Sep 25 near predicted monthly values

Predicted Monthly T-index for September: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
09 Sep 25 Near predicted monthly values
10 Sep 25 Near predicted monthly values
11 Sep 25 Near predicted monthly values
COMMENT: IPS HF Communications Warning 2 was issued on 4 September
and is current for interval 7-10 September. Spread F was observed at
times during local night, with similar conditions expected for today.
Degraded local propagation conditions are expected for today, but
MUFs are not expected to be depressed.

How to Use the WB7TPY
Packet <-> Internet Gateway

First, some brief operational notes:

(1) Messages must not contain any foul language, or commercial purpose.
(2) Messages can only be sent to countries that the United States has
a third-party agreement. All others will be destroyed.
(3) Messages from the internet should be less then 5K in length.
No files should be sent.
(4) If you have questions, please do not hesitate to contact me either on
packet radio: WB7TPY@WB7TPY.AZ.USA.NA -or-
Internet : david@stat.com

(5) Have fun. Use the gateway as much as you like. That is what it is
there for.

From Internet to Packet

Send mail to the internet address of:

gate@wb7tpy.ampr.org

The first line of text must contain a full packet address, preceded with the
word "Packet:"

For example, mail to my packet address, would have the first line of text;

Packet: wb7tpy@wb7tpy.az.usa.na

** NOTE: this line MUST be left justified.

From Packet to Internet

Send as private mail (never a bulletin) to the packet address of:

gate@wb7tpy.az.usa.na

The first line of text must contain a full domained internet address,
proceeded with the word "Internet:"

For example, mail to my internet address, would have the first line of text;

Internet: david@stat.com

Editor, HICNet Medical Newsletter
Internet: david@stat.com FAX: +1 (602) 451-1165
Bitnet : ATW1H@ASUACAD

3849. Re: Thanks, ARRL

Paul H. Bock (phb@syseng1.melpar.esys.com) wrote:

: The best way to get an idea across that you really feel *strongly*
: about in regard to ham radio is to either go to a meeting or hamfest
: where you know your SM or Director will be present and let it be known
: that you *really need* to talk to him/her for a few minutes, not just
: BS and exchange pleasantries. I'd be very surprised if the official
: didn't make a specil effort to hear you out; that's part of their job.

: If for any reason you cannot meet in person, write a letter or
: else e-mail ARRL Headquarters directly.

: BTW, if worse comes to worse, pick up the 'phone and *call* your
: SM - *everybody* has a telephone.

I will clarify a bit.

The Section Manager (SM) is responsible for workings of the ARRL Field Organization in his or her Section (a state, or part of a state). Contact the SM to talk about ARRL Section-level activities.

The ARRL Division Director represents an ARRL Division (a group of sections) at the ARRL Board Meetings. It is the ARRL Directors who make ARRL policy and set the overall direction of the organization. Contact your Director if you want to discuss ARRL policy, or want to offer your opinion on ARRL policy.

The addresses and (usually) telephone numbers of the SMs and Directors is found on page 8 of QST.

The ARRL Headquarters staff are the paid staff, reporting to our CEOs, who are directly responsible to the Board. We administer the policy and programs set by the Board and deliver a wide range of membership services. Contact ARRL staff for questions about our publications or membership services.

Sid Boyce (szb50@ccc.amdahl.com) wrote:
: I did see a posting quite some time ago, lost it somehow, where
: someone said that after he had sprayed his monitor case and attached
: it to chassis, his problems remained the same.

Some of the shielding sprays can be effective, especially against upper HF or VHF emissions from the computer system. A word of caution, though: make sure the spray (it is really a paint) will adhere properly to the surface you are shielding; if is not clean, and the metallic paint flakes off, you may have a whole new set of problems to deal with. The emissions will decrease in direct proportion to the amount of smoke that comes from the computer components when the short circuits cause failure.

If you are going to use ferrites, make sure you use the right materials and enough. One bead of #43 is not enough to supress HF emissions, for example.

: Is the ARRL DXCC-list from february 1994 the most current list?
: It is the newest I can find at ARRL infoserver, but I suspect it
: for not beeing up to date. The former Soviet states looked wrong, and
: some other prefixes too.

Raymond,
Please ask the info server for a new index. The current ARRL DXCC
list, dated July 94 and updated Aug 11, is available on the server.

Best Regards, Michael Tracy, KC1SX, ARRL Technical Information Services

The MIT Radio Exam Team will be offering Commercial Radio Exams on
Saturday September 10th at 10AM.

Exams for the MROP, GROL, GMDSS/O, GMDSS/M, and the Radio Telegraph
2nd Class License will be offered.

The session will be held on MIT's campus in room 1-150 at 77 Mass Ave
in Cambridge MA.

There is a $35 / license exam fee and an FCC "regulatory" fee of $35
for all licenses except the GROL.

For further information contact Nick at 617 253 3776 between 9 -5 weekdays.

Our next scheduled commercial exam sessions will be on Saterday
October 8th at the Hoostraders Hamfest in Rochester NH and on Saturday
November 12th in Cambridge MA.

I realize this post is a bit late but the Telegraph exam material
has just become available. This license may be of particular interest
to Extra Class hams as they will be given credit for the code test portion
of the test.

I have uploaded to SimTel, the Coast to Coast Software Repository (tm),
(available by anonymous ftp from the primary mirror site OAK.Oakland.Edu
and its mirrors):

SimTel/msdos/hamradio/
samfb91.zip Morse Code training. Sends and receives

SamFB helps you learn Morse Code with several training modes. SamFB
can send and receive Morse Code from your keyboard, cassette port, or
through a control line on either COM 1 or COM 2. SamFB can send a
file as Morse Code, too.

Special requirements: None

3858. ICOM 22S mod (repeater switch)

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-09 03:23:45 UTC
From: n4zbb@toybox.raleigh.nc.us
Message-ID: <1994Sep9.032345.4806@toybox.raleigh.nc.us>
Source record: 260456
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

A friend of mine (without internet access) has a ICOM 22s that has
been mod'ed so that all the repeater pairs btwn 146 - 148 on the
front panel instead of the '1', '2', '3', etc. where the diode matrix
determined the Tx and Rx freq.s and included simplex. The
problem is, now that the mod had been made, the simplex freq.s are
no longer avail., but a four row diode matrix is avail.

He has heard of a way of adding back in the simplex freq.s using this
diode matrix. He wants to use the rig for packet, and free up another
rig.

Anyone familar with is mod to the 22s and a way to add back in simplex ?

3859. Mitrek 800 Mhz Service Manual/ Info ??

Push the limits!

W3ZZ and crew...

would like to announce our participation in the ARRL Sept VHF contest. 1800 GMT 9/10 (2pm ET Sat.) through 0300 GMT 9/12 (11pm ET Sun.) We will be operating in the mountains of south central Pennsylvania, grid square FN00 (40.01 deg N. 78.01 deg W.)

We encourage you to turn on your VHF and UHF radios, covering the 50, 144, 222, 432, 902, 1296 and 2304 MHz bands and listen for our multi band, multi op station. We will be operating SSB, CW and FM modes. Look for us near the national calling frequencies for all bands and modes, except 2m FM where we can be found from 146.550-146.580 MHz. We hope to work those equipped stations within a 500 mile radius of our location! no problem :) For those at or greater than that distance we'd be glad to sked you for the DX contact. Look for us near 3.818 MHz during the contest between 0000-1200 GMT Sun.

We hope to be active Friday evening too, so hope to hear you on the bands. Tell us you heard us on the net S9+...where pathloss is 0dB to just about anywhere!

gd

3865. GB2RS News 11th September 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-09 06:08:24 UTC
From: dave@llondel.demon.co.uk
Message-ID: <779116104snx@llondel.demon.co.uk>
Source record: 260465
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 11th of September and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

And we start this week with our congratulations to Katie Cannon, who has passed her 5 words per minute Novice Morse test at the age of only seven. She took the test at Reading on the 16th of August and is one of the youngest people to have passed this test.

The seventh Amateur Radio Direction Finding World Championships take place this week in Sweden. For the first time the RSGB has sent an official four-member team to represent the United Kingdom.

Later this month, the 160 metre UK National ARDF Final will be held in Northamptonshire. For information on all types of direction finding, contact Brian Bristow, G4KBB, whose address is correct in the RSGB Call Book.

Now some sad news: Midlands GB2RS news reader Tom Douglas, G3BA, passed away last week. He was well known as someone who put a great deal into amateur radio over many years. He will be greatly missed. A full obituary will appear in the November edition of Radio Communication.

The next RSGB Microwave Round Table meeting takes place on Sunday the 13th of November at the British Telecom Laboratories, Ipswich, Suffolk. The event is organised by the Martlesham Radio Society and will commences at 10am. Attractions will include the usual round table sessions, test equipment and bring and buy facilities. The provisional lecture programme includes talks on 10GHz rainscatter, 24GHz and 47GHz activity, as well as an update on the 10GHz Phase 3D transponder by Freddie, ON6UG. For security reasons, all access is by advanced booking only, and it is important to give the names of all persons attending in a group if you request multiple tickets. Tickets can be obtained by sending a Self Addressed Stamped Envelope to Roy Smith, G0RRC, 'Lykkebo', The Street, Burstall, Ipswich, IP8 3DN.

It has been reported elsewhere that a number of rallies due to be held on Sunday the 25th of September have been cancelled. In fact, only the Peterborough event is cancelled. Four events are still taking place: the Harlow Amateur Radio and Computer Show, the Three Counties Rally, the North Wakefield Radio Club Rally and the Scottish DX Cluster Support Group Junk Sale. Full and accurate information of all of these events can be found in the September edition of Radio Communication. We will of course be giving you details via GB2RS next week.

An RSGB Regional Meeting takes place on Saturday the 22nd of October at the New Friend's Hall, Purdown, Stapleton, Bristol. The doors open at 12.30pm, when light refreshments will be available and the meeting commences at 2pm. Several members of the RSGB Council will be in attendance plus representatives of HQ. Full details will appear in the October edition of RadCom which is scheduled to be posted to all RSGB members within the next ten days.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From the USA, ARRL officials and staff members are appending /125 to their own callsign, until the 19th of September to commemorate the 125th anniversary of the birth of Hiram Percy Maxim, co-founder of ARRL.

From Qatar, the callsign A71A/ID23 is being aired to celebrate 23 years of Independence.

From Marianas Islands, JA6CNL will sign KH0/KR4VN until Tuesday the 13th from Saipan Island on all bands from 40 to 10 metres, CW and SSB.

Now the rallies we know of for today, Sunday the 11th of September:

The British Amateur Radio Teledata Group (BARTG) Rally is being held at the Sandown Exhibition Centre, Sandown Park Racecourse, Esher, Surrey. There is easy access from junction 10 of the M25, which is not far from the M3, M4 and M40 motorways. Doors open at 10.30am. The event features many exhibitors and special interest groups, covering radio, computers, peripherals, software, books, kits and test equipment, all with the emphasis on Data Communications. Refreshments are available.

The Cranfield Amateur Radio Car Boot Sale (organised by the Milton Keynes and District Amateur Radio Society) is being held at Cranfield Airfield, Bedfordshire. The airfield is located near the M1 Motorway. Take junction 13, if travelling from the south or 14 if arriving from the north. Doors open at 9.30am. Talk-in is on two metres, channel S22.

Also the Lincoln Short Wave Club 'Hamfest' is being held at the Lincolnshire Showground and Exhibition Centre, situated some four miles north of Lincoln on the A15, Lincoln to Scunthorpe road. Doors open at 10.30am. The event features all the usual trade stands and a bring and buy stall. The site also has lots of attractions for other family members. Refreshments are available and talk-in is on channel S22.

Next the only event we know of for next weekend:

On Saturday the 17th of September the Scottish Amateur Radio Convention and Computer Show (SARCON) is to be held at the Cults Community Centre which is situated some two miles west of Aberdeen on the A93 road. Doors open at 10.30am, or at 10.00 for disabled visitors. The event features many trade stands, an RSGB Bookstall and enquiries stand, computer and special interest group stands, a bring and buy stall and a lecture programme. The RSGB Morse Test will be available on demand, subject to the usual fee and the need to bring two passport size photographs.

Refreshments will be available and talk-in will be on two metres, channel S22. Further details from Martin, GM0JCN on 0569 731177.

Now for the HF contest news:

The Scandinavian Activity CW Contest takes place from 1500 on Saturday the 17th until 1800 on Sunday the 18th on the 3.5 to 28MHz, but not the WARC bands. See September RadCom page 18 for more information.

The RSGB 21/28MHz SSB Contest takes place from 0700 to 1900 UTC on Sunday the 2nd of October. See June RadCom page 82 for full details.

Next some VHF contest news:

Another RSGB 24GHz Summer Cumulative Contest takes place from 0900 to 2100 UTC today, Sunday the 11th. See April's RadCom for details.

Also today, the Worked All Britain 144MHz High Power Phone Contest take place from 0900 to 1700 UTC and there are sections for fixed, portable, mobile and Short Wave Listener stations.

The RSGB 70MHz Trophy and SWL Contest takes place from 0900 to 1400 UTC on Sunday the 25th of September. There are three sections: Single Operator fixed, All others and Listeners. See July Radcom page 82 for further details.

Special event stations active during this week include:

GB2OWM which is active until Thursday the 15th from the Orkney Wireless Museum on the island of Ronaldsay, WAB area ND49, during the Fourth Orkney Science Festival.

Today, GB0RAF is operated by members of the RAF Amateur Radio Society from the Lincoln Hamfest, which will be on 80 and 40 metres, CW and SSB. Also GX8MWA and GX5MW which will be operated by the Medway Amateur Receiving and Transmitting Society at the Strood Steam Rally, and GB2NFR will be on air from the North Foreland area of East Kent, commemorating the wartime radar sites operated from there.

And now the solar factual data:

The period from the 29th of August to the 4th of September saw a considerable rise in sunspot indices, solar flux levels and the X-Ray flux. Two M class flares were reported, but the geomagnetic field has remained generally quiet.

On the 30th of August sunspot group number 7773 rotated into view and two M class flares erupted, the first an M1.1/SF and the second an M1.4/SF. Smaller sub-flares and radio noise bursts were also reported. The daily sunspot indices started the period at 23 and rose every day reaching 101 by the 3rd giving a mean of 47. Solar flux levels have also climbed from 78 units on the 29th of August up to 94 units by the 4th of September, with the period averaging 86 units. The 90 day flux average was 78 units on the 4th of September.

Geomagnetic activity has been quiet throughout the period with the Ap indices averaging 5.5 units. The state has been 'Nil nothing to report'. The aa indices for the 23rd to the 29th of August, as supplied by the British Geological Survey, was quiet with the daily indices averaging 12.9 nanoTeslas, about K2. There were many periods down to only 5 nanoTeslas.

The X-Ray flux levels increased very considerably, reaching B4.3 on the 30th. The period averaged B1.9 units. The electron fluence levels have been at moderate throughout the period. This, and the seasonal changes, have resulted in a modest improvement of ionospheric conditions. The monthly RI sunspot number for August was 22.8 with a maximum of 44 on the 14th and a minimum of 10 on the 2nd and 22nd. The smoothed sunspot number for February 1994 was RI 35.0 +/-5. Bartells rotation 2199 started on the 30th of August.

I'll repeat the figures. Spots - 47; Flux - 86; Ap index-5.5; X-ray flux B1.9. August Spots RI 22.8.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged 6.7MHz, though the 30th and 31st of August were up to 7.2MHz. The darkness hour lows averaged 3.0MHz, though levels varied from 2.8 up to 3.6MHz. No spread F was reported, showing that the ionosphere is stabilizing considerably. The highs are now around 20.00 hours and the darkness lows around 04.00 hours.

I'll repeat the figures. Highs - 6.7MHz; lows - 3.0MHz.

Now the ionospheric data for the north:

The F2 daytime critical frequency data from Ekaterinberg is now available again and from the data we have, the daytime levels are about 5.7MHz and the darkness hour levels 3.5MHz. We hope to catch up next week.

I'll repeat the figures: Highs - 5.7MHz; lows - 3.5MHz.

And lastly the solar forecast:

This week, the quieter side of the sun will be looking our way and solar flux levels are expected to be about 75 units, with geomagnetic activity quiet. Ionospheric MUFs in the south during daylight are expected to reach 21MHz, and the darkness hours about 10MHz. Northern stations should find the ionosphere more stable now. North/south paths are expected to be the best.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Foxtrot and G7 Tango Quebec series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Juliet series.

Two responses for the price of one...

In article <CvtyIp.Eut@utnetw.utoledo.edu>,
pouelle@uoft02.utoledo.edu writes:

| In article <33veao$hk9@cville-srv.wam.umd.edu>, ham@wam.umd.edu (Scott Richard
Rosenfeld) writes:
| >Hey, in the UK, they give "2E" calls to
| >their equivalent of "No-Code Tech"s.

Actually, they give them to Novices. Their "No-Code Tech" (funny how
that sounds like an insult) is, ummm, the B Class? The same as the
Australian "Limited" anyway - full power and privileges above 30 MHz.

| Why not issue the FUK, ASS, KKK - I have heard KG8FU, met the HAM and he
| is a really nice guy! Just my $0.05 (0.02 + 0.03 for taxes)

Hmmm... What about my own callsign? No, I didn't ask for it; it was
the next on the list...

3867. You dont do this on air ...

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-09 07:36:18 UTC
From: Gary_Thorburn/UB_Networks@UB.COM
Message-ID: <9409091504.AA8696@smtp.UB.com>
Source record: 260467

I got many responses to my exasperated comments about posters to rec.radio.amateur.misc / Info-hams who do not put their e-mail address in the body of their message.

The upshot seems to be this:

1) Most newsreaders correctly display the source address of a posting. No problem.

2) "Info-hams" is digest service which collects rec.radio.amateur.misc articles periodically and e-mails a digest to a subscriber. Info-hams does not have the smarts to correctly display the source of each posting.

I have no idea how many readers get their stuff thru Info-hams. But if you expect replies from this segment of the readership, embedding your e-mail address in the text is necessary.

[lines deleted]

If the RX/TX switching is too slow you normally don't get a link at all
so i think your TRX is ok. Amtor needs a very precise timebase,
otherwise you will quickly get out of synch, especially on weak
signals.. For that reason all implementations on a home computer like
MBA-TOR, PCTOR, BMK-MULTY or HamComm require the user to find a
correction value for his computer's timebase. The normal xtal
oscillators are just too inaccurate. Check that value according
to the procedure in the program manual.

3869. Ten Tec Corsair stability

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-09 08:13:43 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9409090113.aa12262@paris.ics.uci.edu>
Source record: 260470
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

Anyone know about a guy in Georgia who produces a mod for the
Corsair PTO that is some sort of comparator that prevents
drift? I would like to find the source, and was told such
a mod kit exists. I will also try to call Ten Tec and see
if they know anything about this.

: who worked on a 2M amp with the cover open for a couple hours - the
: next morning he woke up blind. He said while working on the amp
: he felt *nothing* - no heat, no pain, no discomfort. This story
: was originally passed over the QRP email group from an M.D.
: conducting research on the subject.

Pretty anecdotal, it seems. Is there any evidence that the two events
are related? Do they *know* that radiation from the amp caused the
blindness? What wavelength radiation? Two meters, or is there
something else? Has it happened to anyone else, or does it seem
irrepeatable? What other explanations have been proposed, and which
tested somehow and ruled out? "Post hoc, ergo propter hoc."

Clark Savage Turner WA3JPG (turner@safety.ICS.UCI.EDU) wrote:

: I need to know how these are treated by Part 15 if possible, we have a
: tower permit hearing on Wed night, and there is an irate attorney
: coming who will complain about interference to those devices. I would
: like to show her Part 15 and quietly relax.

Part 15 devices such as these:

1. Must not cause interference to other radio services.
2. Must suffer any interference caused to them by other radio services.

This information is contained in Part 15 and should also appear on a label
on the unit or in its instruction manual.

: I give a presentation tonight to a hearing board (Wed night) so if anyone
: has some good info, could you pass it along soon?

I am surprised they are honing in on Part 15 -- are they not also concerned
about televisions (could be your fault) or telephones (never your fault,
according to the FCC)?

I do hope you have spoken with John Hennessee, our Regulatory Information
Specialist. He may have some additional information. Could you use a copy
of our RFI package and our RFI pamphlet, which explains interference to the
layman? I will send them today, and call you later this afternoon.

Do let me know if I can help.

Source record: 260333

The comment period has expired (in April, if I remember right).
The ARRL and many other individuals and organizations submitted
their comments. Most (if not all) commenters were supportive of
the idea, and suggested some modification such as "staged
introduction" to allow retrieval of previously held calls, etc.
The ARRL comments were published in QST and the ARRL Letter.

Now the issue is awaiting the FCC decision.

3879. FCC reg pt 15

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-09 15:10:43 UTC
From: pmarsh@metro.mccneb.EDU
Message-ID: <9409091510.AA11088@metro.mccneb.edu.mccneb.edu>
Source record: 260334

A week or two ago, someone asked how to get a copy of FCC reg part 15, and reported no success in previous efforts.

What I have in hand is a 5-volume set of the full FCC regs, Parts 0-19, 20-39, 40-69, 70-79, and 80-end. You should be able to get the Parts 0-19 volume to meet your needs. I don't remember the price, but it wasn't a whole bunch of bucks, knowing my wallet.

In the front of my CFR 47 Reg book, it says "Sales are handled exclusively by the Superintendent of Documents, Government Printing Office, Washington DC 20402 (telephone 202-783-3238)." Call them and ask for:
CODE OF FEDERAL REGULATIONS 47, PARTS 0 TO 19.
The full set is reprinted as revised to Oct 1 of each year -- ask about when the 1994 version will actually be available, if the 1993 version would not suit you.

Paul Marsh N0ZAU Omaha pmarsh@metro.mccneb.edu

In article <34l00rafl1@mhade.inhouse.compuserve.com> Hans Brakob <71111.260@CompuServe.COM> writes:

[I have reformatted your single line paragraphs.]

This is a "contest like" atmosphere, very similar to SweepStakes in that it is "domestic", and a "little pistol" can play the game. A LOT of folks are obviously enjoying it. Where are these same folks in the SS? What is the "trigger" that drew them ito this, or conversely, why aren't they in SS in similar numbers?

I think a lot of people hear the word "contest" and get an image of a lot of mindless frenetic activity calling CQ or calling stations through pileups to exchange a quick "59 NH" with each, staying up all hours to do a 24 or 48 hour event, and generally going crazy and causing assorted domestic conflicts. Of course this is often the way it is, though I can tell you from experience that it's a lot of fun to do a contest casually - see if you can do an hour here and an hour there and get some reasonable scores, as well as filling in the gaps in your WAS or DXCC collection.

The /125 event, lasting over a week, is a more relaxed, unpressured thing where all you get is wallpaper, no one wins--or loses--and the endorsements for 50 - 125 contacts still provide some reward for those who like to show a measure of extra accomplishment. I think it was an excellent idea and I hope we don't have to wait for HPM's 150th to provide an excuse for another event like this.

Novice roundup shares much of these qualities, except that its audience is too limited.

I have some partially baked thoughts on the subject, but I'd like to hear what others might think. (Especially those of you who did the "/125" thing, but never have played seriously in a domestic contest like SweepStakes.)

I have participated semi-seriously once or twice in contests, including SS and ARRL/DX (or CQWW) and have enjoyed it. But I don't feel I _have_ to.

From: ehare@arrl.org
Message-ID: <1994Sep9.162720.5789@arrl.org>
Source record: 260336

Greg Bullough (greg@netcom.com) wrote:

: In article <1994Aug31.145924.17054@arrl.org> ehare@arrl.org (Ed Hare (KA1CV)) writes:

: >Thanks, Jeff. It sometimes gets discouraging to work a 70-hour week (paid
: >only for 37.5 of them) and then get here in the morning and see some of the
: >usenet participants trash us for our imperfections.

: You begin to go down the wrong path when you mistake criticism for lack
: of gratitude.

I only make that mistake with folks who choose only to show the criticism
and keep the gratitude to themselves. :-) An understandable mistake, I hope.

: >Sadly, I often see that we are being criticized for not doing something
: >we already do, or for doing something that we don't do;

: Education is part of running a business, too. It's called PR. Like it or
: not, perceptions are real, and people make decisions based on them. If
: people don't see what you're doing, then you need to be more effective in
: showing them. That's all.

True indeed, however, I see this problem as a two-way street; I think that
people who are going to make decisions about an organization share in
the responsibility to be properly informed. Unfortunately, it is easy
to miss something in the 200+ pages of information we publish in QST,
the thousands of pages of information we publish in our books or in
the megabytes of files we make available on our server and by ftp, etc.

: For example, you have here, rather than receiving a compliment with a
: gracious 'why thank you,' responded with a laundry list of why this
: forum makes you so miserable.

: Not real appropriate.

Part of the value of this forum is that we amplify and expand on each
other's ideas. If I limit my responses only to exactly the subject at
hand, and offer no original thought, each thread would die down in short
order. Come to think of it . . . :-)

: >Even more sadly, I have seen us criticized
: >*appropriately* on this forum *instead* of having the "constructive
: >criticism" directed to the appropriate staff or to your Division
: >Director who *can* change League policy.

: Now this is VERY inappropriate. It comes across as trying to quash League
: Members' and other Radio Amateurs' expresssion of their thoughts in a
: public forum of their own choosing. For years, the staff, directors,

: and officers have had a forum of their own, QST, and have filtered
: dissenting opinions rather high-handedly. In fact, they frequently used
: the journal to belittle dissenting opinions.

: Ed, I don't know if it's what you intend, but it comes across as if
: you are saying 'go through channels, where we can decide what spin to
: put on your expression of opinion...'

Oh, that is not at all what I intended! I must admit that I am a bit
surprised to see your reaction from someone who has an opportunity
to see me for a few years on this forum. I had hoped that the emphasis
of *instead* would communicate my intent. If it was insufficient for
some, I do apologize. I keep forgetting that this group of fine folks
is comprised of a wide spectrum of technical and social backgrounds and
I guess that the things unsaid can be important. OTOH, it has oft' been
pointed out to me that some of my posts tend to blather on and on and ...
I was trying to cut to the quick of my communication without the usual
pages of explanation about how and why I had come to believe as I do.

I find this forum to be quite useful, or I wouldn't use it. It has
helped me to shape and sound out my ideas quite effectively. You may
have missed the number of times I have said so.

: As a organization run by the Membership, the League doesn't have the
: luxury of putting on blinders. At this point, I frankly expect my
: Division Director to be reading this forum (I'm willing to see
: the League foot the bill for an account, which may also be used
: for League business-related e-mail, if that's what it takes) in
: order to stay in touch with what people are saying about things.

: But I *really really* have a problem with League Staff trying to
: get the membership to not voice their opinions.

Well, I re-read my post and just didn't see where I tried to get anyone
NOT to voice their opinions. If I really stretch, I can read that into
my choice of words, but that is not my intent -- never has been and never
will be.

: To be blunt, Ed, it's not what I pay you for. Express any opinion
: you want in this forum, but do not, under your ARRL hat and signature,
: try and get the members you serve to be quiet. Or to re-direct them
: to a place where other members-at-large can't hear them. Don't.

I didn't. See below.

: >I encourage all rec.radio.amateur participants to make your views known to
: >your Division Director, by mail, email, telephone or in person at his or her
: >many appearances at conventions, hamfests and club meetings! The
: >info@arrl.org files have a list of HQ and ARRL officers email addresses,
: >postal mail addresses, telephone numbers, etc. See also page 8 of QST. This
: >forum has produced many excellent ideas and a wide spectrum of amateur
: >community opinion. If it worth saying it is worth saying to the ARRL
: >Division Directors, too. All of the Directors I have met feel that they

^^^
Now I think Jon Bloom's summary of my intent was more eloquent than mine, but I think I got the idea across. Let me sum it up by encouraging communication, here, with each other, with HQ staff and Directors.

We will never put the puzzle together by keeping the pieces inside the box.

Ken-

If that is the same mod as I have, each switch postion is actually for the lower frequency of the repeater pair. When the left-hand toggle switch is in one postion, the radio transmits and receives on the same frequency. When in the other position, it transmits and receives 600 KHz apart. The right-hand toggle switch determines whether the transmit frequency is offset plus 600, or the receive frequency is offset plus 600.

Included among those repeater frequencies, are the simplex frequencies as well. As I recall, the switch has MANY postions, and covers from 146.01 to 147.57, in 30 KHz steps. There was an ultra-miniature toggle switch that could be added, that would change the main switch range by 15 KHz, so that all channels could be accessed. A second ultra-miniature toggle switch could be added to make BOTH transmit and receive frequencies be offset plus 600 from the switch setting.

As you suggested, I believe there were one or two "blank" switch postions that might be used for diode-programmed frequencies.

Source record: 260339

Greg Bullough (greg@netcom.com) wrote:

: And, by the way, I also believe that the staff (that means *you*) should
: exercise some restraint in counter-pointing the views of the membership.
: We are, after all, an organization of members. The views of the members
: prevail. The staff is there to serve, not to shape, the will of the Amateur
: Radio community. Even if the staff believe that will is wrong. And yes,
: most of the staff are members, but as such they must still take care not
: to use their position to overly influence membership opinion, and to avoid
^^^^^^
: the perception of doing so.

I agree, the HQ staff must exerise some restraint and must be viewed
as representing this organization on all of their posts on this forum. The
last time I said so, it erupted into a "League Censor" flame war, though.
:-) Having said that, don't expect us not to be real people, with our own
individual ideas. Those personal ideas will color our posts and
our membership contact. Very few things in life are black and white.

I think your choice of the word "overly" is the definitive part of what
you said; we are here to both serve and to shape. The skill in doing
our jobs comes from the balance.

Let me demonstrate that with an example: Mentally answer the question
that follows.

QUESTION: "The amateur service continues to have problems with interference.
Should the ARRL push to get susceptibilty legislation to replace the
voluntary standards for RFI immunity of consumer electronics equipment?"

I can almost hear the resounding "yes!" If I am proscribed from shaping
amateur opinion, I can count the votes and set the appropriate action
in place.

However, let me now shape amateur opinion on the issue by offering a point
of view formed from several years of experience and thought:

Susceptibility legislation is a two-edged sword. One one hand, there is
a distinct benefit to force the manufacturers to build equipment that is
immune to our legal signals. However, the current standards in US and Europe
range from immunity of 3- to 10-volts/meter. These standards represent
the state of the art that can be achieved without increasing the cost of
TVs to be higher than an air-force screwdriver. It is not likely that we
can get legislation enacted for much more than the current US standards
of 3 V/m.

Approximately 90% of the 100-watt class amateur stations would not generate a field in a neighbor's house > 3 V/m. (10% would.) Most 1500-watt class stations would generate a stronger field. In most European countries, the immunity standards have the force of law. If we were to get immunity enacted here, there would be a real risk that once it is deemed best to take a legislated approach to EMI problems, that legislated approach would be applied equally(?) to the consumer equipment and RF emitters. If hams ended up with legislation that required us not to generate a field > 3 V/m, it would defacto limit the power of most amateur stations. This would also be a burden on amateur stations, who might have to prove their field strength to be below the limits. This is happening in several countries as we speak (any expansion from our European participants?)

For this reason, I recommend that we continue to work closely with manufacturers and standards groups to strengthen the process that is resulting in ongoing improvements to the immunity of consumer equipment, saving a legislated approach only for a last resort.

I offer that the amateur community is much better served by my shaping of opinion on this issue rather than leaving each person to determine what is the best course of action, probably basing an opinion on less information that I have managed to gather in 5 years of being the ARRL RFI Desk. (Please do not read into this that I am prohibiting anyone from forming their own opinions on this, or any issue, using any amount of information they deem appropriate.) It does demonstate that there are few black and white issues, or black and white rules on how HQ staff should conduct themselves. All in all, I think we have conducted ourselves with dignity and honor, and usefully, on this forum.

=========
SpaceNews
=========

MONDAY SEPTEMBER 12, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* SpaceNews EDITOR ON WWCR *
============================
Mark you calendars and warm up your receivers for a ive radio interview with the man behind the SpaceNews keyboard, John Magliacane, KD2BD. The producers of "Spectrum", a radio program broadcast over shortwave radio station WWCR, on 5810 KHz, in Nashville, Tennessee will feature an interview with the editor and publisher of SpaceNews on Sunday 11-Sep-94 from 0300 to 0400 UTC (that's Saturday 10-Sep-94 10:00 PM to 11:00 PM Eastern Time).

"Spectrum" is a communications program that originates live from studios in Holmdel, New Jersey, and features news and information regarding shortwave listening, commercial broadcasting, scanning, and Amateur Radio. During the interview, listeners will be given the opportunity to call into Spectrum and ask questions of the guest.

WWCR broadcasts on shortwave with 100 kilowatts of transmitter power, over 1 million watts of effective radiated power, and provides a signal that covers much of the world. In addition, those with TVRO ground stations can receive "Spectrum" on the Galaxy 5 satellite, transponder 17, audio 5.8 MHz.

* FO-20 RETURNS TO MODE JD *
============================
FO-20 software reloading was successfully completed on 06-Sep-94 at 1800 UTC and FO-20 was commanded into mode JD. The following packet frames were captured by KD2BD in New Jersey last Monday:

8J1JBS>BEACON <UI C>:
JAS1b RA 94/09/05 20:06:58
428 442 674 678 730 817 835 821 000 673

010 101 000 001 111 100 001 111 011 000

8J1JBS>BEACON <UI C>:
JAS1b M0 94/09/05 20:07:00
Mailbox is at your service from 94/09/05 05:10:00
The JD Transmitter is available in all orbits
during JD mode.

The mailbox is also in operation. Congratulations go to the spacecraft controllers for returning FO-20's digital transponder back to life after it had been reported as being lost forever.

Ground stations are encouraged to copy telemetry transmissions made by the satellite, and forward telemetry frames to the spacecraft controllers if the on-board computer should crash once again.

[Info via Kazu Sakamoto, JJ1WTK]

* HV AND T7 ON AO-13 *
==========
It's time for Eric Archer, WB6GYD, to take another trip to the lovely country of Italy. Eric plans to be in Rome the period of September 14-28 and will operate from the following locations:

HV3SJ Vatican City: Sept. 17/18
T70A Republic of San Marino: Sept 24/25

The operation at HV3SJ may not result in AO-13 contacts as Eric does not yet have permission to operate in the middle of the night. So at this point in time, AO-13 is questionable for HV3SJ. Eric will operate HF instead (if not satellite). HV3SJ now has a permanent FT-736R, 435 MHz Mirage amplifier and Landwehr LNA at their station. (FT-736R donation is courtesy of Yaesu USA, THANK YOU!!) Eric plans to help install some yagis to complete their permanent station.

Eric has permission to operate in the middle of the night at the RSM Radio Club location, so the operation there is definate. He will either sign as T70A or as T7/WB6GYD. Look for Eric at approximately 0000Z to 0500Z on Sept. 25. This seems to be the best operating time for AO-13.

[Info via Eric Archer, WB6GYD]

* W2YLV SK *
==========
John Snodgrass W2YLV has passed away. He was active on AO-10 & AO-13 CW. It is unclear whether John kept any skeds with people on AO-13, but this notice is for all his friends on AO-13. John was in his 70's and died of heart problems. He will be missed, especially by his friends on the radio.

[Info via Len Popyack, WF2V]

3891. Re: Questions about TV Twin-lead J-Pole

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-09 19:40:52 UTC
From: rusty@aurora.btg.com
Message-ID: <34qdo4$lp7@server.btg.com>
Source record: 260345

In article <34ga8c$7v3@prodsql.prodigy.bc.ca> Paul Antaki <pantaki@prodigy.bc.ca> writes:
>I recently posted a requested for instructions one building a TV
>Twin-lead J-pole antenna. I received many helpful responses that included
>plans for an antenna by Ed Humphries. I;ve been trying to build this
>antenna and I keep messing something up so that the results I get are no
>better than my standard HT antenna. I was hoping that someone might have
>some ideas as to what I may be doing wrong. Here are some of the problems
>I've encountered:

"He he he he", he laughed sinisterly.

>-The TV twin-lead does not lay completely flat so it's difficuly to
>measure (i.e. there's some curvature). How should it be measured?

It should be measured flat! Just hold it down or have someone help you.
It's not that hard. Your main worry is about the length of the conductors.
You aren't using the foam type, are you? That's a no-no. To straighten
out the twin lead just coil it the opposite direction of its current
curvature. That will help some.

I've found that the 300-ohm twin lead from Radio Shack (my experiences so
far) tends to have, what I believe to be, a lower velocity factor than
that used by Ed Humphries and thus changing all the dimensions of any
twinlead j-pole plans I've seen. Nonetheless, I have a set of dimensions
for a 2m J-pole using the brown Radio Shack twinlead that needs NO
tweaking at all. I've made about a dozen in assembly-line fashion with
each having an SWR of about 1.2 or so across the band. Haven't made any
with the clear twinlead recently and thusly have never nailed down the
needed dimensions for that variety.

If you want something sturdier, check out one of the recent CQ or 73
magazines for a 450-ohm "ladder line" j-pole. Several club members here
have made them and the dimensions in the article turn out to be exactly
what you need without fiddling.

>-Does the exact location of the feedpoint for the coax make a significant
>difference?

You betcha!! One thing you can do is to use straight-pins on your coax and
try different points along the twin-lead for the best feedpoint. This is
where a good part of your impedence matching occurs. Also, for the
connection from the coax's braid to the twinlead I've used a short piece
of wire instead of attaching the braid directly. This has made making the
connection easier and more "spiffy" looking. :-)

>-Will the length of the coax used to feed the antenna make a
>signification difference?

If the coax is lossy, YES! In the real world, coax will be lossy but to varying degrees. I've used RG-58U at lengths of up to twenty feet without any noticable problems. A friend, Bernie K4XY, used a run of 60-100ft (put his J-pole HIGH up in a tree) with good results. Recently he went with 9913 and things improved signicantly. Wonder why? :-)

>-I'm using an RG-58U cable with a large connector at one end to which I >attach a BNC adaptor. Will this make a difference?

Adapters can cut the signal strength down around 0.5 to 1.0 dB. Will you notice? I doubt it. Still, if you're using a HT with your J-Pole most of the time just put the BNC connector right onto the cable. Otherwise, install the most often used type of connector onto your coax and use the adapters for the radios you'll use infrequently. Or, considering the cost of all these twinlead antennas, just make a new antenna, each with a different connector. :-)

>-Is there any way to measure the efficiency of the antenna without using >a SWR meter? The only meter I have access to is a Radio Shack meter than >measures HF only. It's readings seem to be quite a bit off.

Other than tuning for maximum signal strength with a signal strength meter I can't think of another way but that doesn't mean there aren't any. Seriously, at least go over to Rip Shack and get their cheap inline SWR meter, it'll be better than nothing. See if you can borrow a good Daiwa or, better yet, Bird meter to make your adjustments. If you plan on doing much antenna construction it will be worth your while to get access to an SWR meter or antenna analyser (MFJ-249 or -259) for the band of the antennas you'll be making.

>Any assistance would greatly be aprpeciated.

Hope I've been of some help. I've enjoyed making many of these twinlead antennas for the 2m and 440 bands. Fun stuff! Bounce me some mail if I can answer any other questions for you. Good luck!

=========
SpaceNews
=========

MONDAY SEPTEMBER 12, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* SpaceNews EDITOR ON WWCR *
============================
Mark you calendars and warm up your receivers for a ive radio interview with the man behind the SpaceNews keyboard, John Magliacane, KD2BD. The producers of "Spectrum", a radio program broadcast over shortwave radio station WWCR, on 5810 KHz, in Nashville, Tennessee will feature an interview with the editor and publisher of SpaceNews on Sunday 11-Sep-94 from 0200 to 0300 UTC (that's Saturday 10-Sep-94 10:00 PM to 11:00 PM Eastern Time).

"Spectrum" is a communications program that originates live from studios in Holmdel, New Jersey, and features news and information regarding shortwave listening, commercial broadcasting, scanning, and Amateur Radio. During the interview, listeners will be given the opportunity to call into Spectrum and ask questions of the guest.

WWCR broadcasts on shortwave with 100 kilowatts of transmitter power, over 1 million watts of effective radiated power, and provides a signal that covers much of the world. In addition, those with TVRO ground stations can receive "Spectrum" on the Galaxy 5 satellite, transponder 17, audio 5.8 MHz.

* FO-20 RETURNS TO MODE JD *
============================
FO-20 software reloading was successfully completed on 06-Sep-94 at 1800 UTC and FO-20 was commanded into mode JD. The following packet frames were captured by KD2BD in New Jersey last Monday:

8J1JBS>BEACON <UI C>:
JAS1b RA 94/09/05 20:06:58
428 442 674 678 730 817 835 821 000 673
608 000 463 482 503 487 497 507 645 000
670 704 655 662 999 635 865 490 018 000
010 101 000 001 111 100 001 111 011 000

8J1JBS>BEACON <UI C>:
JAS1b M0 94/09/05 20:07:00
Mailbox is at your service from 94/09/05 05:10:00
The JD Transmitter is available in all orbits
during JD mode.

The mailbox is also in operation. Congratulations go to the spacecraft controllers for returning FO-20's digital transponder back to life after it had been reported as being lost forever.

Ground stations are encouraged to copy telemetry transmissions made by the satellite, and forward telemetry frames to the spacecraft controllers if the on-board computer should crash once again.

[Info via Kazu Sakamoto, JJ1WTK]

* HV AND T7 ON AO-13 *
==========
It's time for Eric Archer, WB6GYD, to take another trip to the lovely country of Italy. Eric plans to be in Rome the period of September 14-28 and will operate from the following locations:

HV3SJ Vatican City: Sept. 17/18
T70A Republic of San Marino: Sept 24/25

The operation at HV3SJ may not result in AO-13 contacts as Eric does not yet have permission to operate in the middle of the night. So at this point in time, AO-13 is questionable for HV3SJ. Eric will operate HF instead (if not satellite). HV3SJ now has a permanent FT-736R, 435 MHz Mirage amplifier and Landwehr LNA at their station. (FT-736R donation is courtesy of Yaesu USA, THANK YOU!!) Eric plans to help install some yagis to complete their permanent station.

Eric has permission to operate in the middle of the night at the RSM Radio Club location, so the operation there is definate. He will either sign as T70A or as T7/WB6GYD. Look for Eric at approximately 0000Z to 0500Z on Sept. 25. This seems to be the best operating time for AO-13.

Hans,

As one of your 2142 QSOs, I would like to thank you for being on the air this past weekend. I had just upgraded to General less than a week before, and had just finished my millionth trip up & down from the roof to tune my freshly made multi-band dipole. You were my first contact.

It was nice to hear all the different /125 operators on the air, with many of you stopping to explain what their position was and what the event was all about.

Thanks again,

Greg KD6KGW/AG

HA>>> who worked on a 2M amp with the cover open for a couple hours - the
HA>>> next morning he woke up blind. He said while working on the amp
HA>>> he felt *nothing* - no heat, no pain, no discomfort. This story
HA>>> was originally passed over the QRP email group from an M.D.
HA>>> conducting research on the subject.
HA>>
HA>>Is this actually documented someplace? I'm skeptical, although I suppose
HA>>that, given a very precise, unfortunate set of circumstances, it could
HA>>happen. It's more likely with ionizing radiation, though.

Soft X-rays are generated by color TV picture tubes because of
the high voltage -- around 25,000 volts. What 2M amplifier is
running that kind of voltage? Even the TV tubes represent a
hazard only at their edges due to the thickness of the face
plate and that this glass is *lead* glass. That area of the
tube is well shielded against the x-rays.

To become exposed to any significant RF energy one would have to
couple one's eyes quite closely to the tank coil.

HA>The story used to pass around our radio club at Maryland about the ham
HA>who was up on his tower doing work on the 432 antennas when somebody
HA>down in the shack flipped on the 432 rig and 1 kW amp, and sent a CQ.

HA>Maybe some other UMers reading this will be able to verify the story.
HA>The man went blind from the RF. Granted, 432 is considerably more
HA>energetic than is 144 MHz, but it could still, conceivably, happen at
HA>144.

Does anyone have documented evidence for these stories? Published
in recognized scientific publications? Until that can be provided
I view these anecdotes in the same category as the live alligators
flushed into the New York City sewer system, or the story about
the woman who wanted to dry off her cat by putting it in a microwave
oven causing it to explode.

During WW II in the early days of magnetron manufacture there were
cases of cataract formation in the eyes of testers who habitually
looked into the output window of the tubes during operation (to
determine whether the tube was gassy--seen as a blue ionization of the
gas). But here there was high peak power (often 100KW to 500KW),
very high frequency (x-band, or 10,000MHz), and sharply focussed.
What happened was simply excessive heating of the lens of the eye.
Even in these cases, it didn't result in blindness and the cataracts
took a while to develop before people made the association.

>bitching, mind you--I simply wondered when to expect new info.
>
>Charles
>N9SQE

I believe that the callsign server is updated when someone donates a copy of the database to the maintainer. I recall that the January update took place when someone donated a copy of the QRZ! CD-ROM to the maintainer (in fact the information message says it was N9DK). I imagine the next update will occur when someone donates the Summer QRZ! CD-ROM. There's not a large, well-funded bureaucracy behind these things---just the generosity of volunteers.

> 73, Len, KB7LPW

Amusing story: I worked Barry Goldwater one morning and then followed up the QSO with a QSL and SASE. Told him that I'd really love to get his card, etc.

Well, I DID get a card from him. But it was only a 3x5 index card with his signature on it. No mention of the QSO or anything.

Sounds as if one wants his real card, they have to work somebody else working his station! :-)

I spoke to the FCC a couple weeks back asking about my license and also
asked about this. The reply (roughly form memory) was that it was
approved, but the FCC didn't know how to implement it yet. His guess was
about 6 mths to a year for it to happen.

Herb Rosenberg (herbr@netcom.com) wrote:

: Over th e past several years, I have tried several different PC
: compatible computers in the shack in an attempt to use with my HF
: Station. It seems no matter with PC I have tried, and having tried
: toroid chookes, ac filters, etc. my PC (now a 486 /66) still QRM's the
: heck out of the ham hams with birdies and other annoying noise.

: Does anyone out there know of a manufacturer of a PC tower or desktop
: cabinet that has excellent RFI suppression and shielding? If so,
: would be very interested in finding this out.

As things get cheaper, I only expect the computer components to be noiser. An example is the lack of all metal cases on the market. Another example is the number of motherboards for low-end systems that have little ground plane. I've even seen some systems that don't have the the capability to handle the ground current from the MB to the power supply!

If you want RF quite equipment, buy Tempest certified stuff. The government has started to dump this stuff onto the second hand market. You could buy a Tempest certified 286 or 386 for a few hundred dollars. Rip the guts out and put in the machine you want (most of the ones I've seen have been standard form factors).
I've even seen Tempest certified HP Laserjet IIs. They seem to want to keep those and the monitors, but they still become available on occasion.

Another option is to buy industrial enclosers for all your PC equipment. You could then shield all the components. Unfortunatly this stuff is expensive due to the low demand. It also doesn't address the noise caused by the keyboard. Power problems can be reduced by UPS, Isolation transformers(also known as gravity sources), or even a good quality power strip.

Good Luck and 73,
Shawn KE4GHS

3904. Daily Summary of Solar Geophysical Activity for 08 September

Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info

/\

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

08 SEPTEMBER, 1994

/\

(Based In-Part On SESC Observational Data)

PLEASE NOTICE: Beginning with this report, we have started supplying
estimated coronal hole boundary information derived from Yohkoh x-ray
imagery. Software is freely available at the anonymous ftp site
"ftp.uleth.ca" in the directory "pub/solar/software" or on our computer
bbs to automatically extract and graph this information on a grid of the
Sun. Zones where coronal holes may become geoeffective are also plotted
on-screen. The software requires an IBM or compatible system with
VGA-graphics capabilities. To use it type "showhole daily_report" where
'daily_report' is the name of the daily report containing the coronal hole
data. The daily reports do not need to be pre-edited.

This service will be provided when the required resources are available to
produce these maps. They are independent of the NOAA/USAF inferred
coronal hole locations which are most frequently derived from magnetogram
and He 10830A imagery and contain only four boundary points defining the
shape of coronal holes. This service may therefore be used as an
alternate source of higher-resolution coronal hole boundaries. For
polarity data, consult the NOAA/USAF reports.

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 08 SEPTEMBER, 1994

NOTE: Energetic electron fluence at greater than 2 MeV was at high levels
today.

Greater than 2 MeV Electron Fluence for 08 SEP is: 1.5E+09

SYNOPSIS OF ACTIVITY

Solar activity was low. An optically uncorrelated C1
x-ray event occurred at 08/0129Z. Other activity included a
B8/SF x-ray flare from Region 7775 (N16W04) at 07/2057Z. A
weak Type II sweep was associated with this event. Estimated
shock velocity was 400 km/sec. All regions on the disk are in
slow decay.

Solar activity forecast: solar activity is expected to be
very low.

STD: A full-disk Yohkoh x-ray image has been appended below.

The geomagnetic field has been at unsettled to minor storm
levels. A favorably positioned coronal hole is most likely the
cause of the activity. The GT 2 MeV energetic electron flux
was in the high range.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly unsettled to active with isolated
periods of minor to major storm conditions persisting for the
next two days. Conditions are expected to relax to mostly
unsettled on day three.

Event probabilities 09 sep-11 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 09 sep-11 sep

A. Middle Latitudes
Active 25/25/20
Minor Storm 15/15/10
Major-Severe Storm 10/10/05

B. High Latitudes
Active 25/25/20
Minor Storm 20/20/15
Major-Severe Storm 15/10/10

HF propagation conditions were below-normal over most
regions today, particularly on high and polar latitude
circuits. Effects of increased geomagnetic and auroral
activity are responsible for these degradations. Similar
degraded conditions are expected over the next 24 to 48 hours
before gradually beginning to improve on 11 and 12 September.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

3905. Coax Fittings

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-09 21:55:00 UTC
From: ron.magnus@nwcs.org
Message-ID: <940909170153177@nwcs.org>
Source record: 260359

Greetings all.

I have a nice supply of Belden 9913 Coax. I was thinking of using it on my 2meter beam when I put it back up in the next week or so. My delima is this. The 9913 is hollow core. I am concerened about water collecting on the inside and making it worthless. Since I live in the Pacific Northwest (Portland) we get our share of rain and temperature swings over the period of a year. I would like to hear from anyone that has had expeirence with this type of cable. My thought is that using a type N fitting might be ok, but what about moisture condensing on the inside from heating and cooling.

Please reply via e-mail, as it takes 2 days for things to reappear on the system that I read from. If you think your reply is interesting for others, of course then all should see it as well.

73, Ron...WA7GFE

/\

POTENTIAL SATELLITE ANOMALY WARNING

ISSUED: 18:00 UT, 09 SEPTEMBER

/\

ATTENTION:

Energetic electrons at greater than 2 MeV have climbed to high levels
over the last 24 hours. Occasional periods at very high levels may be
possible at geosynchronous altitudes over the next several days before
electron densities are expected to begin dropping off. Overall daily fluence
levels are now in the high range.

Consult the daily summary reports for regular descriptions and
information on geosynchronous electron fluence at greater than 2 MeV.

** End of Warning **

I got the letter from NYS Custom plates too, indicating a target date of Sept. 30th. Funny though, as I did not order the new plates (but I did get an invitation from them to do so earlier).

Propagation Forecast Bulletin 37 ARLP037
From Tad Cook, KT7H
Seattle, WA September 10, 1994
To all radio amateurs

SB PROP ARL ARLP037
ARLP037 Propagation de KT7H

Solar activity was up dramatically last week. The average solar flux was nearly 20 points higher than the previous week. The best day was September 3, when the flux was 100 and the K index was zero or one over most periods.

On the same day a well placed coronal hole on the solar surface produced a Class C X-ray flare. Several days later this caused a rise in the K and A indices which signal a disturbance. The K index has been as high as 5, and the A index has risen over several days. Disturbed conditions should continue, possibly through the 11th. Following that, the geomagnetic field should remain quiet, and the solar flux should hit a low for the month, around 70, for the period from September 20 through 28.

As we head into Fall, look for improving worldwide propagation on the higher bands, although with lower flux levels, conditions won't be as good as last year.

Sunspot Numbers for September 1 through 7 were 59, 93, 101, 86, 92, 83 and 89, with a mean of 86.1. 10.7 cm flux was 85.8, 90, 100, 94, 94, 95 and 92, with a mean of 93.

The path projection for this week is from Las Vegas, Nevada to Mongolia.

80 meters looks good from 1130 to 1300z, and 40 meters from 1030 to 1400. Check 30 meters from 1330 to 1530, and 20 meters from 2300 to 0530. 17 meters may be open on many days from 0100 to 0330, and on some days 15 meters might be open from 0100 to 0230. On rare occasions 12 meters could have an opening around 0000 to 0200, and 10 meters from 0030 to 0200.

3909. Wanted: RF Transistor 2SC1947

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-09 23:20:28 UTC
From: climatol@gnv.ifas.ufl.edu
Message-ID: <1994Sep9.182028.5292@tower>
Source record: 260364
Cross-posted to: rec.radio.swap,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I need a 2SC1947, which according to my cross-ref is equivalent to an ECG 341 (or NTE 341). This is a 4-watt rf power transistor that has an oddball lead arrangement and the emitter tied to the case. This makes it very difficult to substitute a more common transistor.

My local electronics dealer tried to order the ECG equivalent, and it has been backordered for a while. Apparently they are out of them and don't know when they plan to make/get more. The dealer wanted $6.50 for the thing. If anyone out there has one they can sell me (or can get one fairly quickly) for a price that isn't too outrageous, I'd love to hear from you.

By the way, I need the transistor to repair a Diawa MT-20 handheld. This is an ancient and rare two meter amateur handheld transceiver. If anyone has any accessories for the MT-20 (particularly a battery pack, working or not) that they'd like to sell, I'm interested.

Thanks,

-- Bob Johnson, WB4JCM

Commercial radio operators testing scheduled for Sat, Sept 17.

The Hartford, Connecticut, Test Center of National Radio Examiners
(W5YI Group) will conduct commercial radio exams on Saturday,
September 17, starting at 12 noon in Hartford. Exams will be
given for the General Radiotelephone Operators License (GROL)
along with the other licenses and endorsements that are now
available through this privatized testing program.
Seating at this particular venue is limited, so any interested
party should contact me via email or telephone at 203-722-2358
for further details on this session or subsequent exam sessions.
Thanks.
Robert Halprin, K1XA, NRE Test Center Manager (Htfd).

Source record: 260366

SB SAREX @ AMSAT $STS-64.001
STS-64 SAREX Liftoff

Silver Spring, MD, September 9 1994 at 21:00 EDT

The Space Shuttle Discovery roared into the skies of the Kennedy Space Center today initiating the fourth Shuttle Amateur Radio Experient (SAREX) flight this year. The STS-64 mission, delayed by looming showers and clouds, was launched 1 hour 53 minutes later than originally planned. Liftoff of Discovery occurred at 22:22:55 UTC. The six member crew of STS-64 will spend 9 days on-orbit performing and supporting several flight experiments. These include atmospheric studies which will be performed using the LIDAR In-Space Technology Experiment (LITE), deploying and retrieving the Spartan-201-II astronomy satellite, and supporting the Robot Operated Materials Processing System (ROMPS) experiment.

Three of the crew members are ham radio operators. They are Shuttle Commander Dick Richards, KB5SIW, Pilot Blaine Hammond, KC5HBS, and Mission Specialist and Jerry Linenger, KC5HBR. The three will operate the SAREX in both voice and packet modes. SAREX is a secondary mid-deck payload that allows ham radio operators and school students the opportunity to talk to the astronauts while they are in orbit. Ten scheduled school group contacts with students in the US and New Zealand are planned. The SAREX Working Group expects the SAREX payload to be configured and operational approximately 22 hours into the flight or at approximately 20:22 UTC on September 10. Please note that Shuttle power conservation measures, required to support an extra (10th) day of flight, is expected to result in the packet radio system being turned on later than what usually occurs in a typical SAREX mission. Listen on the downlink frequency (145.55 MHz) for the packet system BEFORE sending packet connects to the Space Shuttle.

The following Keplerian element set, JSC-012, which was developed by Gil Carman, WA5NOM, is the official SAREX element set for today.

SB SAREX @ AMSAT $STS-64.002
SAREX Info Sheet

STS-64 Shuttle Amateur Radio Experiment (SAREX)
Information Sheet

Mission: STS-64 Space Shuttle Discovery
Lidar In-Space Technology Experiment (LITE-1)
SPARTAN-201
Robot Operated Materials Processing System (ROMPS)

Launch: September 9, 1994, 22:22 UTC

Orbit: 57 degree inclination

Mission Length: 9 days (Nominal)

Amateur
Radio
Operators: Dick Richards, KB5SIW, Commander, Blaine Hammond, KC5HBS,
Pilot, and Jerry Linenger, KC5HBR, Mission Specialist

Modes: FM Voice
Prime callsign: KB5SIW

Packet Radio
Callsign: W5RRR-1

Frequencies: All operations in split mode. Do not transmit on
the downlink frequency.

Voice Freqs: Downlink: 145.55 MHz (Worldwide)
Uplinks: 144.91, 144.93, 144.95, 144.97, 144.99 MHz
(Except Europe)
144.70, 144.75, 144.80 MHz (Europe only)

Note: the crew will not favor any specific uplink
frequency, so your ability to work the crew will
be the "luck of the draw"

Packet Freqs: Downlink: 145.55 MHz
Uplink: 144.49 MHz

Info: Goddard Amateur Radio Club, WA3NAN, Greenbelt Maryland,
SAREX Bulletins and Shuttle Retransmissions
3860 KHz, 7185 KHz, 14,295 KHz, 21,395 KHz, 28,650 KHz
and 147.45 MHz (FM)

ARRL Amateur Radio Station, W1AW, Newington, CT
SAREX News Bulletins
3990, 7290, 14,290, 18,160, 21,390, and 28,590 KHz
and 147.555 MHz (FM)

Also, bulletins available on internet, via AMSAT ANS,
Compuserve, and your local PBSS.

School Group Participation: 10 school groups will participate
in SAREX with pre-scheduled direct
and telebridge contacts. These include
nine in the U.S., and one in New Zealand.

QSLs: ARRL Headquarters
SAREX QSL (please indicate flight #, STS-XX)
225 Main Street
Newington, CT 06111
This address must be used for all future missions.

In order for the managing process to run smoothly, please include
the following information in your QSL or report: Shuttle flight
nur (STS-XX), date, time in UTC, frequency and mode (FM voice,
packet, sstv or fv). This documents the contact or listener
report. In addition, you must also include an SASE using a large,
business-sized envelope you wish to receive a card. No cards
are distributed without the proper post affixed or sufficient
IRCs included.

The following clubs have graciously volunteered their service for
handling QSL cards for the following missions:

STS-58 Connecticut DX Association
STS-60 Cowley County Amateur Radio Club, Kansas
STS-59 Orange Park Amateur Radio Club, Florida
STS-64 Nashua Area Radio Club, New Hampshire

Information provided by Frank H. Bauer, KA3HDO and Robert Inderbitzen, NQ1R
for the SAREX Working Group

```
The Grumman Amateur Radio Club is celebrating its 50th
anniversary on Sept 10 with a special events station. There
will be 2 HF stations operating from the Club station in
Bethpage, Long Island, NY. Local 2 meter QSOs are available
for non-HF hams on the 145.33 repeater. 8 AM to 8 PM EDT.
Special QSL card with SASE to POB 644, Bethpage, NY, 11714.
For less info, see page 127 of QST, September issue.

3917. 7.002 CW Vee Beacon info wanted?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-10 03:32:21 UTC
From: jfsinger@delphi.com
Message-ID: <9409092331592.DLITE.jfsinger@delphi.com>
Source record: 260370

A beacon that sends continuous CW v's has been heard for years on 7.002, mostly during the winter. At rare times it ID's on CW as RCQ45. The signals appear to be coming from the UL7/UA9 area.
The beacon is becoming copiable around 1130z long path and around 0100z short path in Missouri. This evening it was quite strong.
For the past year I have been logging appearances of the beacon and tape recording some of its more interesting variations.
Does anyone have any info or comments about this highly useful (for DXers) beacon? Anyone have ideas about its purpose? Where do you think it's located?
I am especially interested in comments from listeners in Europe/Asia.
Jeff Singer K0OD jfsinger@delphi.com

I don't think I ever heard the term until the late 70's at least. I recall reading a QST article by someone who said he was helped out in his early radio days by someone whose name was "Elmer," and his article is apparently where the name came from. It may well have been a reprint of an older article, but I think a search through old QSTs would eventually turn up the answer.

3920. Re: Questions about TV Twin-lead J-Pole

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-10 05:43:29 UTC
From: mconner@rain.atms.purdue.edu
Message-ID: <34rh21$1np@mozo.cc.purdue.edu>
Source record: 260372

In article <34qdo4$lp7@server.btg.com> rusty@aurora.btg.com (Rusty Haddock) writes:
>I've found that the 300-ohm twin lead from Radio Shack (my experiences so
>far) tends to have, what I believe to be, a lower velocity factor than
>that used by Ed Humphries and thus changing all the dimensions of any
>twinlead j-pole plans I've seen. Nonetheless, I have a set of dimensions
>for a 2m J-pole using the brown Radio Shack twinlead that needs NO
>tweaking at all. I've made about a dozen in assembly-line fashion with
>each having an SWR of about 1.2 or so across the band. Haven't made any
>with the clear twinlead recently and thusly have never nailed down the
>needed dimensions for that variety.

Can you post these dimensions? Sure would save a bunch of us some
time and wasted twinlead. (yeah, I'm too lazy to experiment, but I'd
just as soon get it right the first time whenever possible).

>If you want something sturdier, check out one of the recent CQ or 73
>magazines for a 450-ohm "ladder line" j-pole. Several club members here
>have made them and the dimensions in the article turn out to be exactly
>what you need without fiddling.

I can vouch for this. I'd like to have a twinlead version (rolls up
smaller), but the ladderline version works very well.

>In article <34ga8c$7v3@prodsql.prodigy.bc.ca> Paul Antaki <pantaki@prodigy.bc.ca> writes:

>connection from the coax's braid to the twinlead I've used a short piece
>of wire instead of attaching the braid directly. This has made making the
>connection easier and more "spiffy" looking. :-)

I twisted the braid up and tinned it, then made a hook out of it and
clamped it to the ladderline to try the position out. Once you cover
it with electrical tape (indoor use), it looks fine w/o the additional
effort of putting a piece of wire on it.

> >-Will the length of the coax used to feed the antenna make a
> >signification difference?
>If the coax is lossy, YES! In the real world, coax will be lossy but to
>varying degrees. I've used RG-58U at lengths of up to twenty feet without
>any noticable problems. A friend, Bernie K4XY, used a run of 60-100ft
>(put his J-pole HIGH up in a tree) with good results. Recently he went
>with 9913 and things improved signicantly. Wonder why? :-)

I use 10 ft of RG-58A - a little lossy, but is very flexible. Need
to get some better cable to see just how lossy it is.

> >-Is there any way to measure the efficiency of the antenna without using
> >a SWR meter? The only meter I have access to is a Radio Shack meter than
> >measures HF only. It's readings seem to be quite a bit off.
>Other than tuning for maximum signal strength with a signal strength meter
>I can't think of another way but that doesn't mean there aren't any.
>Seriously, at least go over to Rip Shack and get their cheap inline SWR
>meter, it'll be better than nothing. See if you can borrow a good Daiwa
>or, better yet, Bird meter to make your adjustments. If you plan on doing
>much antenna construction it will be worth your while to get access to an
>SWR meter or antenna analyser (MFJ-249 or -259) for the band of the
>antennas you'll be making.

Are these things still being made? I was told by several folks they
are unavailable. I bought a ParaDynamics 144/440 meter for $34 -
cheap and possibly a bit inaccurate, but good enough to tell you if
you're way out of the ballpark. It even looks like the RS meters I've
seen, so maybe it's the same manufacturer.

> >Any assistance would greatly be aprpeciated.
>Hope I've been of some help. I've enjoyed making many of these twinlead
>antennas for the 2m and 440 bands. Fun stuff!

The worst that can happen is you ruin $1 of twinlead/ladderline and
maybe a connector. There are more expensive foulups to be had in ham
radio. Need to get busy and make a 440 version of my ladderline 144
J-pole.

>does all you guys do?

It may not be your computer. At least not the computer box itself.

One handy tool for finding rf leakage is a 10' piece of rg58 as an
antenna for the main RX, with 3" of the shield pulled back on the
'working end', with heat shrink over the exposed shield and center
conductor. Locate a strong birdie with the case open, then close up the
case and use this rf probe to find the leaky holes.

The first thing you need to do is to unplug everything but the power
cord from the computer, and turn it on. Look for birdies on the bands.
I'll bet that they are greatly reduced.
In short, the first step is to make the PC box itself quiet with
nothing plugged into it but the power cord... If you have birdies, look
inside the power supply - some have Corcom filters on the AC input,
some don't. You may have to supress the PS before anything else. I've
seen the exact replacement RF filter power assemblies at the swap meets
for $5. The common name is a "Corcom" - the name of the most common
manufacturer. Once the power cord is quiet, a piece of copper screening
(from the local hobby store) between the fan body and the metal box
may be required. The back side of the faceplates for the empty drive
bays may have to be covered with copper screening, just as any other
non-shielded RF windows. Then hook up the keyboard. If the trash
level in the RX goes up, work on what was just changed: the keyboard
connection. It might take pulling RG-8 braid over the keyboard cable,
and grounding it on each end. It might even take removing the keyboard
connector from the motherboard, and replacing it with a DB-9 (like a
serial plug) mounted on the cabinet with supression networks between

it's pins and the motherboard. Then cut the DIN plug off the keybaord cable and put the other half of the DB-9 set on it - using good quality metal hoods, of course. If you had to change the connercors, don't forget to cover the keyboard connector hole). Once you can't tell the RF difference between the PC by itself and the PC-keyboard combination, you can start on the monitor. Do the same thing here - it might take shielding the inside of the cabinet with grounded foil and insulating fish paper over that. One article I read years ago about a monochrome monitor ended up with replacing the video wire between the picture tube socket and the circuit board with RG-174. When the PC-kbd-monitor set is quiet, then plug in the printer. It might take a shielded cable here. On mine, I ended up making one with shielded wire and metal hoods on good quality connectors. I also found that of the half-dozen "ground" pins on the DB-25 parallel socket on the I/O card, only 3 were actually tied to ground. A jumper on the card fixed that. Then test the system with both the printer power on & off - my friend's laser printer is quieter than his old dot-matrix (the laser has more metal in the case). Years ago you could buy "aquadag" metalic coating in a spray can - it makes adequate shielding if you can ground it. Shielding the inside of the printer case may be a bit difficult with the flip-top aver the print head area... As to modems and TNCs, the route of least effort is to go internal to the PC case. Unfortunately, external TNCs are more common than internal. However for RF & shielding purposes, TNCs and modems can be treated similarly. My first modem radiated badly - it was a Prometheus with a plastic case. My second (a Hayes 2400 external) was much better (it had a metal case but perhaps that was a coincidence?). My current modem is internal - one less cable/antenna. I took the RJ-11 off the card and replaced it with a shielded RJ-11 with built in RF filters on the pins - AMP makes it. I changed it before I even installed the card in teh computer - so I have no idea as to the performance before the mod. Mice cables can be replaced with shielded wire - but again, before you do anything, try it with the mouse plugged in and unplugged - you might discover that there is no difference. RF chokes and bypass caps on the plug may be enough.

The above is a potentially a lot of work. But it is worth it. My 386 is audible on my scanner on 6m AM from 50 feet away (and my 2m ssb rig will hear it from further) with the case open, but with the case closed there are a couple of minor birdies. If I had shielded the back side of the mini-panel that has the keylock, turbo switch and reset button those would have probably been eliminated. If I ever rebuild the system, I'm probably going to replace that plastic piece with a sheet metal piece with a metal (shielded) push button for the reset, leave out the turbo switch and lamp, and put mini-rf chokes on the disk activity leds.

After looking at what I have written, perhaps this would make a good QST article! "The care and starving of a birdie".

3922. 42nd Annual N.E. DXCC Dinner

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-10 08:51:35 UTC
From: tony@shore.net
Message-ID: <tony.9.0008DC5F@shore.net>
Source record: 260375

Hello all,
On Sunday November 13th, 1994 we will have the NE DXCC Dinner
in Dedham, MA. This will be the 42nd annual event for all those interested in
DX and related aspects of ham radio.
The early birds will arrive by 10:30 for coffee and danish, we will have a
couple of guest speakers for the morning session. DXCC and WAZ card checking
will be done on site. Dinner will be buffet style at 1:30 with our guest
speaker, Bob KK6EK of the 3Y0PI DX-Pedition. Things usually break up by 4:00pm.
There will be a raffle with many prizes as well as the grand prize being a
trip to Dayton 95.
Dinner tickets will be $15p.p.
Please contact Tony WA1MWN for reservations, seating is limited so call early.

Make check payable to Tony Penta, please put in memo space DXCC Dinner and
mail to
66 Pleasant Ave.
Lynnfield, MA 01940
617-334-5770 WA1MWN@K1UGM.MA or WA1MWN@K1EA or tony@shore.net for
more information.

Thanks and 73

3923. Re: Number of Call Signs

Source record: 260377

> | In article <33veao$hk9@cville-srv.wam.umd.edu>, ham@wam.umd.edu (Scott
> Richard Rosenfeld) writes:
> | >Hey, in the UK, they give "2E" calls to
> | >their equivalent of "No-Code Tech"s.

Actually, we give 2xn + 3 Letter calls to Novices, where 'x' is the regional locator E,W,M,I,J,U,D , and 'n' is '0' if you have 5WPM Code (Class A), or 1 if not (Class B).

The Full Calls are more complex, if it is a Gxn + 2 then it is a Class A Call, 'x' can be W,M,I,J,U,D or missing (for England), and 'n' is any number, otherwise the Gxn + 3 Letters are Class A ('n' = 0,2,3,4), or Class B ('n' = 1,6,7,8). '9's are not issued, they are special development licences, and '5' will be the next B Class issued.

Club Callsigns are the same are regular calls - My club is G0TSN, but to allow third party messages to be passed, the prefix changes to GX (England - Normally G/2E), GT (Isle of Man - Normally GD/2D), GN (N. Ireland - Normally GI/2I), GH (Jersey - Normally GJ/2J), GS (Scotland - Normally GM/2M), GP (Guernsey - Normally GU/2U), and GC (Wales - Normally GW/2W)

Special Calls

GB3 + 2 Voice Repeters GB3 + 3 Beacons
GB7 + 2 Data Repeaters (Pkt) GB7 + 3 Data Mailboxes

GBn (1,6,8) +2/3 - Class B Special Event Stations (Third Party Traffic OK)
GBn (0,2,4) +2/3 - Class A Special Event Stations (Third Party Traffic OK)

Class A is the equiv of the US General (or better), Full Power on All Bands.
Class B is the equiv of the US 'No Code Tech', Full power above 30MHz.

Novices are limited to the bands that they can operate, and they can run max power of 5W.

Mike G7OBS (Class B - And proud of it !!)

| Yes, you are missing something...very important...
|
| The DX station is often in a country where the postal system is worse
| than ours (hard to believe, but true) *AND* the rates are still
| higher! It costs almost $2.00(US) to return a QSL card from some
| European countries... hardly the 29cent trivial drop you see...
|
| Now, throw in that there may be hundreds or even thousands of requests
| for a QSL card, and very quickly one can see that NOT COUNTING the
| cost of producing the cards, just to return mail them is around
| $200.00 per 100 cards... hardly a drop in the bucket that will even
| out over time... the DX station is always receiving more requests for
| cards than he would EVER send out... and so the scale is always out of
| balance.
|
| Domestically, you may be correct, but again, consider the ham in Rhode
| Island, Vermont, Wyoming, Delaware etc who is rare and needed for a
| WAS award... they get buried in requests for cards, and if the
| response isn't worth a #10 evelope and a 29 cent return stamp (and the
| time to address the envelope, then you probably won't get the card you
| want because it gets too expensive for the guy on the other end...

Correct. When I lived in Alabama, I would operate the Sweepstakes contest
and receive maybe 100 requests for QSLs. Although money was a major issue
(I was in high school), now the big issue is *time*. In particular, having
to hand address all those envelopes is the biggest nuissance of all. I
would rather get a QSL request with an SAE and no stamp, than with a stamp
and no SAE/SASE.

I worked a couple of folks while mobile myself, then got home and called CQ N1JEB/125 on RTTY for a while. Most folks had no idea about the /125. Disappointing. I like putting RTTY on the air for such events... The rate was very low, so I switched to phone. I have NEVER run such pileups from my home station. Running 100 watts on a few different wires, I worked 64 Qs/hr for several hours.

Some of the stations were very weak, some were QRP, some were mobile, some were DX. I generally took them in the order I heard them, even the DX. I told a 9G1 to stand by while I worked a WA4, for example. After a while I started writing down 4 or 5 calls or call fragments after each QRZ and then calling back those that I had. I'd like to thank all the operators who were EXTREMELY courteous when I was running this way. They knew I had a list, and since they could not tell if they were already on it, they listened as I worked through the list.

I wish I had had more time to operate in this event, and may get a few more hours in yet before the end, but I had a blast! Several people commented to me on the air that we should do an event of this sort as an annual thing. Many of the folks who do lots of ARRL volunteer work don't get to spend as many of their ham radio hours actually on the air as they'd really like. This event was, in a way, a nice way to thank the volunteers for their efforts.

73,

Dan N1JEB/125

From: lifer@w3eax.umd.edu
Message-ID: <34ta6m$7qv@umd5.umd.edu>
Source record: 260181

I worked 20 meter phone a LOT last weekend, and only landed 22 contacts. I heard almost nothing on 15 meters and 10 meters, and a club member had borrowed our straight key. As it happened, I contacted very few people east of the Mississippi.

At any rate, I contacted another three people last night and today. Although I had originally been hoping to work all states in the celebration, I decided that I had put more than enough time into the contest, and called it quits after I got my 25 contacts.

For next time, however, the lure of running the pileups might be enough for me to volunteer for the ARRL and sign /whatever.

The 3-Hr Ap Indices for 08 SEP 94 are: 21 49 56 58 12 13 14 13
Greater than 2 MeV Electron Fluence for 09 SEP is: 5.2E+08

SYNOPSIS OF ACTIVITY

Solar activity was low. An optically uncorrelated C1
x-ray event occurred at 08/2242Z. Since then, solar activity
has consisted of weak B-class x-ray events and low frequency
(25 - 245Mhz) radio emmissions. All regions continue their
slow decay.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at unsettled to active
levels with periods of minor to major storms conditions during
local nighttime sectors. Activity is believed to be in
response to a favorably positioned coronal hole. The GT 2 MeV
energetic electron flux was in the high range.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly unsettled to active for day one becoming
mostly unsettled on days two and three. Isolated periods of
minor storm conditions can be expected during local nighttime
sectors, mostly on day one of the period.

Event probabilities 10 sep-12 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 10 sep-12 sep

A. Middle Latitudes
Active 25/20/15
Minor Storm 15/10/05
Major-Severe Storm 10/05/01

B. High Latitudes
Active 25/20/15
Minor Storm 20/15/10
Major-Severe Storm 10/10/05

HF propagation conditions continued to be degraded along
most polar and high latitude paths. Effects were also noticed
into the middle latitude night-sectors. Similar conditions are
expected on 10 September before gradual improvements begin on
11 and 12 September.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Greetings, All: I see a number of internet usenet messages (usually from rec.amateur.radio.misc) reposted in this conference. Questions who is reposting these messages? How are they being reposted? If one were to reply to one of these messages in this conference, does the reply get back to the original poster? (My hunch would be that they do not.)

Message-ID: <9409120400061382@pcappbbs.com>
Source record: 260223

9913 is great coax if you are going to use it in straight runs, it will not take undo flexing such as being used on a rotor though. And one of the drawbacks of 9913 it is subject to contamination because of the air dielectric. Better coax for your use would be Times Micro Wave LMR400 which uses standard UHF Connectors (PL259) or Comet 5D-FB, which can be purchased from any quality Amateur Radio Store. Check your Handbook and look at the loss factors on coax such as RG8X RG58AU and even the loss in RG213 or RG8. I use 9913 on my vertical installations, but would never consider it for a turnable beam antenna. If your Radio store doesnt carry LMR400 or the Comet 5D-FB you can call NCG Inc. in Anaheim, California 1-714-630-4541 (Comet Importer) and they will be happy to point you in the right direction. Or you can call Talley Communications in Santa Fe Springs, Calif (dont Have Number) and they would be able to ship you LMR400. One point the Comet Coax does require special connectors. Hope this helps. Dale KB7UB dale.piedfort@pcappbbs.com

3938. Re: Amateur Radio in Singapore?

I'm told that the Singapore government spends at least one year
processing licenses. There's no problem owning radios at all.

3939. VHF/UHF/Microwave Resources

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-11 03:31:18 UTC
From: brettb@cruzio.com
Message-ID: <Cvy4G9.1s0@cruzio.com>
Source record: 260191

I'm looking for specific resources for VHF/UHF/Microwaver. How to get started, how to get past just packet and HT's. What equipment to buy, proper procedures, etc. Are there any specific resources, either on the Internet (FAQS, Archives, WWW) or in the print world (Mags or especially good books) for the specialized VHF/UHFer? There is so much to cover in this area that looks interesting, I am looking for good intro material to the various VHF/UHF/Microwave modes (satellite, SSB, AM, FM) as well as tips on equipment and proper procedures. I want to go beyond just using my HT and occasional Internet<==>packet forays... would like to try satellite perhaps DX; CW, SSB and AM as well but want to move ahead wisely. Any tips would be appreciated. I'm especially interested in using the computer to support VHF/UHF work and also GPS.

Thanks in advance for any help.

THX de KC6UPU, grid CM86XX...

I wonder if a specific VHF/UHF/Microwave FAQ or newsgroup might be in order?

Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

Does anyone know of a place I can mail order some crystals from??

I looking to pick up 12 various 2 meter crystals for an old HT.

If anyone knows anyplace I can request some specific freq. crytsals
please let me know!

The San Lorenzo Valley Repeater Club is looking for a guest speaker
who can present a program on GPS. The club is located in Felton CA,
near Santa Cruz and would like this presentation to be presented
at the Octeber 8 meeting at 7:30 PM. We would be grateful if you
are (or know of) a good speaker about GPS. Please phone or e-mail
me with your suggestions. Thanks for your help.

>is a really nice guy! Just my $0.05 (0.02 + 0.03 for taxes)

A scan of the FCC amateur database from Nov 1993 shows that there are no
reserved 2 letter suffixes. These are the reserved 3 letter suffixes.

There are no amateur call signs with the suffix:
ASS FUC FUK FUX GOD PIS SOS
QRA-QTZ QUA QUB QUD QUJ QUK QUQ

There are no N calls with the suffix:
ASS BOX COC COK DDD DIC DIK DOG DUD DUM FAG FUC FUK FUQ FUX
GAS GAY GOD IMQ JAP JEW JUE KKK KOK LID MIK NUT OAF PEW PIG
PIS PUE PUS SAP SEX SOB SOS SUC SUK SUQ SUX TIT WOP
QRA - QUZ

There are only a few N calls with the suffix:
BAG, EXS

There are no K calls with the suffix:
ASS FUC FUK FUX GOD NUT PEW PIS PUS SOB SOS SUC TIT
QRA-QUZ, XAA-XZZ

There are only a few K calls with the suffix:
BOX COC COK DDD DIC DIK DOG DUD DUM FAG FUQ GAS GAY IMQ JAP
JEW JUE KKK KOK LID MIK OAF PIG PUE SAP SEX SUK SUQ SUX WOP

The 6 letter K calls have exactly the same excluded calls as the
N calls do, plus the X calls.

There are no W calls with the suffix:
ASS FUC FUK FUX GOD PIS SOS
QUA QUB QUD QUJ QUK QUQ QRA-QTZ, XAA-XZZ

There are only a few W calls with the suffix:
COC MJL OLK QCG SUK TIT VUA YAL ZKJ ZUI ZUJ ZVB ZYN
QUC QUE QUG QUI QUL QUM QUN QUO QUP QUR QUS QUU QUV QUW QUX QUY QUZ

SB SAREX @ AMSAT $STS-64.006
STS-64 Western R/S Times 09/11

Below are the rise and set times for STS-64 for selected US cities
over the next three days. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note
that all times are in UTC.

Rise= time (HH:MM:SS) the Shuttle Orbtiter appears at the horizon
Az= Azimuth (true) where the Orbiter will rise.
Maximum= time, azimuth (Az), and elevation (El) of the highest part
of the pass
Set= time and azimuth when the Shuttle descends below the horizon
Orb= the number of this orbit
Rise MET= The Mission Elapsed Time at the rise. Format is DD:HH:MM:SS

3945. AIRCRAFT INSTALLATION INFO NEEDED

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-11 12:19:20 UTC
From: Dirk Vander Zee <p01309@worldlink.com>
Message-ID: <2988371791.4.p01309@worldlink.com>
Source record: 260198

1. I need any available info on performing a 2m/440 aircraft installation in an aircaft.

2. Approved antennas, tips from succesfull installations, etc. would be appreciated.

3. If any printed literature is available, please advise as well.

Thanks,

Dirk <p01309@psilink.com>

OK, so, what's going on in FCC-land? Any whispers on when we'll hear
something?

FREE HAM-RADIO CLASSES

FRAMINGHAM -- Have you ever wanted to become an amateur-radio operator? Here's your chance!

The Framingham Amateur Radio Association (FARA) will be holding free classes Saturday mornings at 9:30, beginning Saturday, Sept. 17 and continuing until students are ready to take their ham-radio license exams. Sessions will be held in the basement of the Danforth Building on Lexington Street (use the entrance next to the public library parking area).

In addition, FARA will sponsor classes for hams who already hold a license, but wish to upgrade to higher-level operating privileges.

Ham-radio operators provide emergency communications during floods, blizzards, and other disasters; help at events such as the Boston Marathon; and can talk to other radio amateurs around the world. Hams can also communicate by hooking up computers to radios, and sending electronic messages over the airwaves.

For additional details, contact Ed Weiss (W1NXC) at (508) 881-2301 (before 7 pm) or Martin Bayes (W1/G4DZC) at (508) 435-0564.

AO-16 FILE SERVER S/W RELOAD

HR AMSAT NEWS SERVICE BULLETIN 253.01 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 10, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-253.01

AO-16 Command Team To Reload File Server

At 03:00 UTC 12-SEP-1994 the AO-16 Command Team will begin a reload of the Ramdisk and File Server software. This "Preventive Maintenance" is warranted by the accumulation of uncorrectable SEU's (Single Event Upsets) in the file control structures stored on the ram disk. During the past year four uncorrectable SEU's have been recorded in the directory, root directory and FAT (File Allocation Table) entries of the error logs. In the past, a crash of the file server software was attributed to these types of errors. Reloading and running the ram disk software will reformat the ram disk thereby cleaning out all the bad SEU's. Fortunately, these uncorrectable errors are not occurring in the Error Detection And Correction (EDAC) memory where the actual spacecraft operational software is run. This allows the command team to unload and reload a task or tasks with the shortest amount of file server downtime. The digipeater will be off during this reload and all stations are requested not to uplink to the satellite during this time. The AO-16 Command Team would like to thank all AO-16 users in advance for your cooperation during this critical software reloading process.

[The AMSAT News Service (ANS) would like to thank Russ Platt (WJ9F) for this bulletin item.]

AO-10 STATUS REPORT

HR AMSAT NEWS SERVICE BULLETIN 253.02 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 10, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-253.02

AO-10 Condition

Several satellite operators have asked recently about the condition of AMSAT-OSCAR-10 (AO-10).

Jim Kelly (KK3K) provides the information that he heard a strong telemetry beacon Tuesday morning 6-SEP-94 at about 12:00 UTC. It was at about

145.980 MHz and FMing. Jim notes that AO-10 was in the window at the time. He tried transmitting to it and was able to hear himself through the bird, but the downlink signal was extremely weak and FMing was quite noticeable. As a result, Jim discontinued using it immediately.

It should be noted that AO-10's Engineering Beacon is on a nominal frequency of 145.987 MHz. AMSAT-NA advises anyone hearing AO-10 exhibiting this FMing characteristic, to refrain from using it, as Jim did. This is a measure to conserve the satellite's power system. AO-10 may be old and ailing but it's still usable at times. Let's keep it going as long as we can.

WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 253.04 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 10, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-253.04

Weekly OSCAR Status Reports: 10-SEP-94

AO-13: Current Transponder Operating Schedule:
M QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Jul 11 - Sep 12
Mode-B : MA 0 to MA 90 | Omnis : MA 230 to MA 30
Mode-BS : MA 90 to MA 120 |
Mode-S : MA 120 to MA 122 |<- S beacon only
Mode-S : MA 122 to MA 145 |<- S transponder; B trsp. is OFF
Mode-S : MA 145 to MA 150 |<- S beacon only
Mode-BS : MA 150 to MA 180 | Blon/Blat 180/0

Mode-B : MA 180 to MA 256 | Move to attitude 230/0, Sep 12
==========
N QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Sep 12 - Dec 19
Mode-B : MA 30 to MA 150 |<- OFF Oct 22 - Nov 07 for eclipses
Mode-B : MA 150 to MA 190 | max duration 2h 12m
Mode-BS : MA 190 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-B : MA 230 to MA 30 | Alon/Alat 230/0
Omnis : MA 250 to MA 140 | Move to attitude 180/0, Dec 19
The battery charge state is of paramount importance during the eclipse seasons. As always the command team may have to have to make temporary changes to the published schedule. In that case we will try to minimize the inconvenience, setting Mode-B OFF from MA 230-256 in the first instance.
==========
[G3RUH/DB2OS/VK5AGR]

FO-20: The long awaited software reloading of FO-20 has completed successfully completed on a pass at about 18:00 UTC on 06-SEP-94 and FO-20 was commanded into its digital mode of operation (Mode-JD). For a while, Mode-JD operation will be continued. However, the FO-20 ground station is concerned that the system may crash when mailbox is activated. The controllers have have noticed some failures of onboard command system during the reloading process. Telemetry reports will be very much appreciated if you capture it just before the any crashes. Send your telemetry to Kazu Sakamoto (JJ1WTK) at his INTERNET address of qga02014@niftyserve.or.jp. But in a further status report, KD2BD reports that FO-20 mailbox came back to life over the Labor Day weekend. KD2BD notes that the satellite was sending it's usual ASCII telemetry in AX.25, BPSK, 1200 bps format, and the mailbox was in operation with several active messages. [JJ1WTK & KD2BD]

AO-27: AO-27 has an Uplink frequency of 145.85 MHz FM and Downlink frequency of 436.80 MHz FM. N9AVG reminds everyone that like AO-21, AO-27 operates as part-time repeater. [N9AVG]

IO-26: ITAMSAT Status as of 9-SEP-94: After 40 days of stand-by, ITAMSAT was switched on by ground command and a full spacecraft checkout was performed by the control team. IO-26 was in excellent shape, the battery fully charged and the critical parameters in nominal status. A couple of test software were loaded and executed without any problem. The reason for the long silence is due to the heavy workload of the control team (I2KBD also spent some time in Chile to help the CESAR team) and a lightning that destroyed the main command station. The reload of the Integrated Housekeeping Task (IHT) code with improved capabilities is scheduled to be completed by the end of September to celebrate the first year in orbit of IO-26, so expect a couple more weeks of discontinued use. Best regards, Alberto (I2KBD) ITAMSAT Mission Director. [I2KBD]

KO-25: WH6I reports that KO-25 has still been operational this entire week as far as he can tell. [WH6I]

KO-23: WH6I reports that KO-23 is up and running. He wonders if there is a flaw in the directory as he seem to be having a lot of trouble clearing fills for the directory. [WH6I]

AO-16: AO-16 is up and running without any problems. [WH6I]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ N0QCU. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

3951. Help with rf Series 1550

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-11 19:48:15 UTC

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I just bought a transceiver made by a company called "rf". It looks a little old, but it works. It is a Series 1550. 50 watts, main transmitter goes in trunk of car, 5 channels. I would like any information I can get on this, such as frequencies, how to modify it to run on regular amateur bands(if it doesn't already), etc. Any info would be greatly appreciated.

3952. Electronic Filter Synthesis Pgm.

* INTRODUCING 'FAISYN' FILTER SYNTHESIS PROGRAM FOR MSDOS *
* *
*****************************************************************
```

faisyn20.zip Electronic Filter Synthesis Program

FAISYN is a low cost, effective alternative to expensive commercial filter synthesis packages. The program has be used to design lumped element filters and diplexers from 10's of KHz to 1.5GHz and is the result of many years experience in filter design. Designers know that filter design is often an iterative process. Tedious number grinding is sometimes required to optimize a design. FAISYN eases the burden by allowing the designer to quickly synthesize a variety of circuits that can be simulated and compared using your favorite circuit simulator (FAISYN currently supports PSPICE-TM Microsim, MMICAD-TM Optotek and TOUCHSTONE-TM HP/EESOF circuit formats).

Special Requirements: None

Shareware.

Faisyn was developed by:

Kevin Faison
Carriage House Engineering
16 W. Pleasant Hill Rd.
Owings Mills, MD 21117

You can get FAISYN20.ZIP from one of the following sources:

1. I have uploaded the program to the SIMTEL collection. It is located there, and on it's mirrors in /pub/msdos/electric. I usually have good luck with oak.oakland.edu

2. I uploaded it to watson.ee.ualberta.ca, it can be found in the /pub/cookbook/softw/ibm directory.

Cross-posted to: rec.radio.amateur.misc,rec.radio.info

SB DX @ ALLBBS $OPDX.174
Ohio/Penn DX Bulletin No. 174

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 174
BID: $OPDX.174
September 12, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DX NEWS Letter, IK4CIE, AH0W/OH2LVG, JA0VSH, K4CEF & Southeastern Cluster group, JH1ORA, SM0TXT & DX-Loggen, HR1ERL, WA3YVN, KG6AR, WJ7R, N9NS and AG9GR for the following DX information.

9I, ZAMBIA. Brian, 9J2BO, has been active this past week signing with the special callsign of 9I30ZIN. The special callsign is being used to celebrate the 30 years of Zambia independence. The length of operation and celebration is unknown at this time.

D2, ANGOLA. Kjell, SM7DZZ, will be active as D2ZZ starting September 22nd for about 10 days. He prefers CW and the low bands. After D2-land and in the middle of October (no specific dates mention), Kjell will be active from Namibia as V51/SM7DZZ. Later this year he will be returning to Mozambique to operate as C91Z. QSL to his CBA.

FR/E, EUROPA (UPDATE). There are still concerns on whether or not FR5HG/E is for real, yet most are beginning to feel this station is legit. This station continues to be very active, especially on 40 meter CW, plus the operator has been checking into the French DX Net which is normal for most operations from that highly wanted area. Peter, ON6TT, says this operator sends very fast CW and he feels the operator is a professional radio operator (because Peter heard him say, "I am doing already CW the whole day, so operating phone on the ham bands takes the stress off, hi."). Meanwhile, Kaz, JH1ORA, states he talked Michel, FR5HG, on August 22nd, 40 meters CW, and was told that Michel would be QRV from /E for 45 days, and would be active on CW, SSB and RTTY using a R7 vertical with tuner. QSL via F6FNU. REMEMBER, WORK FIRST WORRY LATER (WFWL)!

HQ, HONDURAS. Ernesto, HR1ERL, will be using the special prefix and callsign HQ1T for the next 2 months. He did not inform OPDX the reason for the use of this special callsign but he did say he will be active on several DX nets. QSL via HR1FC.

IP1, PALMARIA ISLAND (Italy). Victor, IK4CIE, and others will be active for one day between 0700 and 1700z, on Sunday, September 18th. This island is located in the Liguria Region Group and Victor reports its IOTA number is EU-084. Look for IP1/IK4CIE, IP1/I4VJC and IP1/IK4IDW on 10-40 meters, including the WARC bands, mainly on CW but with some SSB operations on the IOTA frequency of 14260 kHz. QSL via the operators CBA. If weather conditions are bad, this operation will be postpone until September 25th.

V5, NAMIBIA (An update on the info from OPDX.172). Pete, N0AFW, will be heading up a group of five operators to be active from the city of Tsumeb, Namibia for a Multi/Single operation in the CQ WW SSB Contest. Operators joining Pete are Mike/N9NS, Craig/AH9C, Glenn/WA0PUJ, Pat/NH6UY and their host Gerd/V51GB. The contest callsign will be V59T, and outside the contest the operators will use their own callsigns /V51. As reported earlier, Pat will be bring gear for satellite operations. The group will arrive on October 24th and depart on November 6th. QSL all calls via WA2FIJ.

V6, FEDERATED STATES OF MICRONESIA. Kazu, JA0VSH, and his wife Miyuki, JG0PBJ, will be active from Pohnpei during October 1-10th as V63KZ and V63MP, respectively. Activities will be on CW/SSB, all HF bands, including the Top Band and the WARC bands. During their evening, CW will only be used so as to not to disturb the other occupants at the hotel. Miyuki is a very new DXer and will probably only operate SSB (PLEASE have patience and help her). QSL to CBA or bureau.
Also active from V6-land will be Shoji, JL7CHC, who was recently active this past weekend from Guam as KH2IO. Shoji will be active until September 14th on 6-40 meters SSB and on 29 MHz FM. QSL via JL7CHC.

VP8/SG, SOUTH GEORGIA ISLAND DXPEDITION UPDATED. Al Hernandez, WA3YVN, informed OPDX that Vince Thompson, K5VT, has been added to the list of operators. The team now consists of the following: Al (WA3YVN), Jan (WA4VQD) and Vince (K5VT). The SGI team will operate 3 HF stations, all bands, CW-SSB-RTTY and are well equipped for low and WARC band operation. Last reported, the equipment was put aboard the Research Vessel "ABEL-J" in June. The equipment is expected to arrive in the Falkland Islands around October 8th and will be stored there awaiting the SGI team. The team will arrive in the Falklands December 23rd. They plan to operate on the low bands and the WARC bands for about 5 days while awaiting for the departure to SGI. Financial support is still urgently needed (Donations can be sent to: SGI DXpeditions, P.O. 2235, Melbourne, FL 32902 USA). The team is in need of a TS-440S AT or equivalent for donation to the ship for future operations of opportunity. Please contact Al, WA3YVN, at (407) 727-0201 or FAX (407) 728-8072 for details.

XW, LAOS. Frank, AH0W/OH2LVG, informed OPDX that Gabriel (Gaby), XE2GV, is expected to be active anytime now as XW8KPL. He is touring several of the Asian countries but his length of stay is unknown. There have been no QSNs reported as of yet from the Arizonia or the Ohio/Penn networks. Look for him on 20 and 40 meters SSB only. A QSL route will be announced on the air.

ZF, CAYMAN ISLANDS. Mark, N7MCA, and Ron, WJ7R, have announced that they will be active in the CQ WW SSB Contest (October 29-30th) as a Multi/Single entry. They will be operating from ZF8AA's QTH using the callsign ZF2MC during the contest. Operations will be on 160-10 meters. Outside of the contest, ZF2MC will operate mainly on SSB on the low bands, and ZF2RV will operate mainly CW on the low bands, and there is a possibility of RTTY/AMTOR opertaions if a proper TNC is located. QSL ZF2RV/ZF8 via WJ7R and ZF2MC/ZF8 via N7MCA.
Also, be looking for ZF2JI in a Multi/Single entry in the CW WW SSB Contest by John Attaway, K4IIF. QSL via KG6AR.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

3954. HF Beacon Frequencies?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-11 22:33:57 UTC
From: herbr@netcom.com
Message-ID: <herbrCvzLCL.J2C@netcom.com>
Source record: 260202

Does anyone know of the listing of various HF Beacons on the various Ham bands? I know a few years ago, there was a network of beacons on 20 ,eters on 14.100 or 14.000 that was coordinated with 7 or 8 various stations around the worls. Each station sent a short cw message at 100 watts then 10 watts then 1 watt, and then the next station began its transmission. It was very good for gauging propagation openings on 20 meters. I know that there are some beacons on 10 meters, but I don't know the freqncies, and I would be very interested in the other HF bands as well.

Any information on this would be appreciated..

Thanks

Herb - KG6OK

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 11/2330Z SEPTEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 11 SEPTEMBER AND FORECAST FOR 12 SEPTEMBER - 14 SEPTEMBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 81/22

GOES satellite data for 10 Sep
Daily Proton Fluence >1 MeV: 3.1E+07
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 1.4E+09
X-ray background: A5.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
12 Sep 13 Sep 14 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 12 Sep: 78/17

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 10 Sep
Learmonth 12 3333 2232
Fredericksburg 14 13
Planetary 15 18

Observed Kp for 10 Sep: 4444 3322
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
12 Sep 10 Quiet to unsettled
13 Sep 10 Quiet to unsettled
14 Sep 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

11 Sep normal normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Sep normal normal fair
13 Sep normal normal fair
14 Sep normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
11 Sep 17 near predicted monthly values

Predicted Monthly T-index for September: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
12 Sep 25 Near predicted monthly values
13 Sep 25 Near predicted monthly values
14 Sep 25 Near predicted monthly values
COMMENT: Night-time Spread F was observed occasionally yesterday,
with similar conditions expected for today.

3957. CW is a joke (I warned you)

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-12 00:05:57 UTC
From: Cecil Moore <cecilmoore@delphi.com>
Message-ID: <pU6TPIV.cecilmoore@delphi.com>
Source record: 260203

Back in the really early days of CW, a few hams discovered that it was extremely difficult to tell a joke using CW. By the time a Texan gets through telling a joke, everyone has lost interest and so it was with CW until a bright, young ham came up with the idea of coding all the jokes into a large joke book. Each joke was numbered so all one had to do was send .--- --... for joke number 7 and everyone who was listening looked up the joke, read it, and responded with a .... .. (HI=ha) if they found it to be funny. It was even translated into 23 foreign languages but "plays on words" lost something in the translation.

A new ham, wanting to get in on the action after hearing 10 minutes of .... .. for Joke number 5 and 15 minutes of .... .. for Joke number 9, sent out .--- ..--- and waited... and waited... and waited... no response... until finally some seasoned CW type came back and said, ...-. .. --- -- ... --- -- . .... .- -- ... --- ..- ... - -.-. .- -. - - . .-.. .-.. .- .--- --- -.- .

3958. Re: Boatanchors list - anybody know what the status is???

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-12 01:50:30 UTC
From: morris@ucunix.san.uc.edu
Message-ID: <350c56$egk@ucunix.san.uc.edu>
Source record: 260220

My understanding is the Paul Prescott, the list owner, has been ill and is unable to make additions or deletions to the list right now (or not able to easily, at least). Those of us on the list have been getting stuff regularly, so it's still active.

Best wishes to Paul for a speedy recovery.

Our club is about to put a 2 meter repeater into service using a PCRC Controller. But, we are having some minor difficulties with the software, and I would like to chat with anyone who has some experience with this device. I'd also like some advice on how to configure the user files and repeater config to give the best security without sacrificing too much functionality. -pat

There's a 10M beacon list available via email from
ham-server@grafex.sbay.org - haven't used that in
a long time - I think you should just write:
INDEX
and wait for the list of files with instructions.
I believe the file you want is titled
10M.BEACONLST or close to that.

3962. Problems with Kenwood TH-78A Modifications

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-12 03:52:58 UTC
From: reykowsk@eemips.tamu.edu
Message-ID: <350jaq$7sm@news.tamu.edu>
Source record: 260214
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi All,
I just bought a new TH-78A and tried to do the "Crossband Repeater" and
"Beyond Caps/Mars Modifications".
After trying different diode/wire configurations I ended up with:
D3,D4, and W2 removed.
Now I can
RX 50-180MHz, TX 136-180MHz, (VHF)
RX 300-400MHz (VHF)
RX 400-512MHz, TX 40-512MHZ (UHF)
But still, I can not receive from 800 to 950 MHz.
Is this feature not available anymore? Can anybody verify this?

I also tried earlier suggested modifications like
D3,D4 and W1 removed, and
D4,D5 removed
both gave me only extended receive with no extended transmit.

Another curiosity: My manual describes the crossband repeater function
for the standard configuration (No diode/wire removed).

A second question: Can someone verify whether the only difference between
a TH-78A (American version) and TH-78E (European version) is that in the
"E" version D2 is removed? Do I need an extra tone module for 1750Hz in
order to get into European repeaters or is this a done deal after removing
D2?

Thanks a lot in advance,

Arne

3963. ak31.zip - Amazing Kenwood: Kenwood HF radio controller

I have uploaded to SimTel, the Coast to Coast Software Repository (tm),
(available by anonymous ftp from the primary mirror site OAK.Oakland.Edu
and its mirrors):

SimTel/msdos/hamradio/
ak31.zip Amazing Kenwood: Kenwood HF radio controller

Amazing Kenwood v3.1 will control your Kenwood HF radio through the
RS-232 and the Kenwood IF-232 interface. Amazing Kenwood supports
all Kenwood HF radio models. This release includes: External memory
channels, COM1-COM4 support, Model sencitive commands, 4 Rig operation...

Special requirements: Kenwood IF-232 interface.

ShareWare. Uploaded by the author.

I have a Kantronics KPC-4 Dual Port Communicator TNC for sale.
$150+shipping.
TNC includes wiring (2 radio wiring units plus 12v power block),
the TNC has a PBBS built in, has the expanded memory (I think it's
50k of memory), KaNode, digipeater...etc. Perfect condition.

If you're interested, e-mail me.

Greater than 2 MeV Electron Fluence for 11 SEP is: 1.6E+09

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7773 (S07W92) produced a
long duration C8/SF flare at 11/0505Z. This flare was
accompanied by a weak Type II sweep burst and a loop prominence
system. Active surging was observed within the region
throughout the period. The remaining regions were stable. New
Region 7778 (S06W53) was assigned.

Solar activity forecast: solar activity is expected to be very low to low. Region 7773 could produce a C-class flare from beyond the west limb.

The geomagnetic field has been at quiet to active levels for the past 24 hours at middle latitudes. High latitude conditions ranged from quiet to minor storm levels. The storming occurred from 11/0600-1500Z and was probably due to coronal hole effects. A GT 10 MeV proton enhancement followed the long duration flare mentioned above. The enhancement began near 11/0700Z, reached a maximum of 1.2 pfu at 11/0935Z, and returned to background levels near 11/1300Z. The GT 2 MeV energetic electron flux was in the high range.

Geophysical activity forecast: the geomagnetic field is expected to be at quiet to unsettled levels during the first two days. Brief periods of active to minor storm levels are also possible at high latitudes during local nighttimes. The field is expected to increase to active to minor storm levels on the third day in response to the long duration C8/SF flare mentioned above. Periods of major storming will be possible at higher latitudes. An isolated southern hemispheric coronal hole may affect the field during the final day as well.

Event probabilities 12 sep-14 sep

Class M 05/01/01
Class X 01/01/01
Proton 05/01/01
PCAF Green

Geomagnetic activity probabilities 12 sep-14 sep

A. Middle Latitudes
Active 10/10/30
Minor Storm 05/05/25
Major-Severe Storm 01/01/20

B. High Latitudes
Active 10/10/30
Minor Storm 05/05/30
Major-Severe Storm 01/01/25

HF propagation conditions were normal over most regions today. Reduced levels of geomagnetic activity returned propagation to usable levels over all regions. However, high and polar latitude paths still observed periods of minor signal degradation during the local night sectors. Similar near-normal conditions are expected through to 14 September. On 14 September, effects from today's long-duration flare may increased levels of geomagnetic and auroral activity and produce minor signal degradation for polar to upper-middle latitude paths. There is also a fairly good chance that this disturbance may not arrive. If so, near-normal propagation

should persist with occasional minor signal degradation
possible over the high and polar latitudes if effects of the
southern polar coronal hole arrive.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

This'll probably sound a little old fashioned, but is it still
possible to buy transverters that convert VHF bands for use with a
160 - 10 meter HF transceiver? Specifically, I'm interested in
something that would put my TS-930S on 6 meters. It doesn't need
to run much power as I can get an outboard "brick" if necessary.
I scoured the ads in the most recent QST and didn't see any
transverters. And my friendly local HRO manager gave me a
quizzical look recently when I asked him.

And while we're at it--how about 220 MHz or 432 MHz transverters?

Please reply direct. Tnx in advance, 73--Jim, K6ZH,

>collecting on the inside and making it worthless.
>73, Ron...WA7GFE

Here's what I did...
I put on BNC connectors designed for RG213. These are close enough in size to the 9913 to work OK. You will never get a perfect seal out of the rubber gasket clamp-type connectors, because the air-core coax tends to collapse as you tighten the connector. So, basically it comes down to gooping it. I smeared some RTV into the coax-connector joint, and around the threads of the clamp. I then spiral-wrapped two layers of electrical tape over the entire connector assembly, the final layer going from the bottom up, like shingles on a roof, continuing a few inches up the coax. Needless to say, you have to plug everything together before you start wrapping. Pull the tape very tight so it conforms to the surface. Lastly, point the antenna end of the 9913 *down*. This way any water that gets in stays put. You can always pull the connector and drain it out, if necessary. You will probably need a short piece of RG58 between the 9913 and the antenna to do this. I've had no problems for about 1 yr of New England weather.

A couple of things: I know many hams say don't use RTV because it's corrosive over time... So far no problem, and all the connectors are nickel-plated brass anyway. You may want to use that coax-seal putty instead. Also, as far as condensation, my 2m antenna is chimney-mounted, and the 9913 runs up alongside the chimney, enclosed except for the last 3-4 ft. Therefore, your milage may vary if you run it up a tower.

Hello,

Well about 10 years ago I had built a trx with a solfan head, and had a few QSO'swith them.
So if I dig properly in my docs I might still find some stuff. As
far as I remember, it was all straight foreward, the only catch had been
that the regulated suply to the gunn diode tended to ocillate, it took a
small seris resistor to fix that, main problem was to find out what was giong
on in the first place.
One disadvantage of the solfan head was that it does not easily tune tu the QRG
used by others. So, although they comunicate with each other fine, they will
not with other OM's.
Why have I given up on 10GHz WBFM? Because there is noone QRV anymore!
All trafic has moved to ssb with an incredible gain in distance, and since
transverter kits are around for about 200$, there is no need for WBFM anymore.
(Same as AM on HF?)

However, if you want more info just for playing around, send me a mail.

73, Moritz DL5UH

3971. Re: Amateur Radio in Singapore?

Newsgroup: rec.radio.amateur.misc

: I'm told that the Singapore government spends at least one year
: processing licenses. There's no problem owning radios at all.

: Jeff NH6IL

Well, that is not quite the right answer. ;->

Here is the right answer (well part of it anyway):

Write the Telecom Authority of Singapore at 4-8 George street, Singapore 0104. The manager of licensing and standards is Tang Chee Mun. Tell him exactly what you want to do and when. He will send you the rules. Be sure to ask him if your _____ tranceiver(s) are on the approved list.

Bring the original of your Licence and operators certificate.

Do not bring any equipment that is not on the "approved list". Most synthesized above 30 MHz (maybe all) are not yet approvved.

You will need to submit:
- Passport
- Your cert & lic
- Two LOCAL character references who have known you for at least 6 months
So, when you get into town, make friends fast. Hint. SARTS club meetings are on the last thursday of each month at the Members' room of the Medical Alumni Assn #2 College Rd. So. Hint. if you are clean, neat, professional, beg a little, have a really good employer, you might get to apply after 3 months; apply as soon as you can.
BIG hint *don't* try to buy your way in as done in some other Asian countries; that won't work here.
- Approval letter from your landlord (usually a management corporation)
Hint. choose VERY carefully. Oh yes, if you operate HF, stay away from the Fort Road area please ;)
- A complete diagram of all components, the wiring and position in/on the building.
- $25

You will also have to give your transceiver to the TAS for examination. Do this before you get your licence and save another 2 - 4 weeks delay.

This will cost you $200 per set (you guessed it, we don't have too many multi-multi stations here). Hint. If your tx/rx is modified for out of band operation UNmodify it now.

Leave your linear stateside, we are only allowed 150W CW 400 PEP on HF

Our bands are not the same as yours as we are in region 3 of the ITU.

Keep your act *very* clean. The local authorities do not cotton to what they consider a bad influence. This means be respectful, clean, neat, polite, and be nice to your mother (come to think of it, is that not how our mothers told us to act anyway?) ;->

Give me a call when you get here on the internet and we can talk.

When dealing with junior level Singaporeans, they *follow the rules*. So they often say "cannot" automatically. Be persistent, firm but polite and if you have to ask to speak to their boss. Be careful, make them loose face and you slide down the snake to the bottom of the pile. Above all, be ssure you are "right and reasonable".

73

Maurice, 9V1ZS

PS good luck. Coffee is on you when we meet; something stronger if I have to pull out my *big hint* file more than once. ;-)

3972. SAREX Status/Keps 9/12 at 11:00 UTC

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-12 11:13:33 UTC

SB SAREX @ AMSAT $STS-64.009
SAREX Status/Keps 9/12 at 11:00 UTC

Silver Spring, MD September 12, 1994 at 11:00 UTC

The SAREX station on the Space Shuttle Discovery was set up by Commander Dick Richards, KB5SIW, and checked out during an Australian pass with Graham Ratcliff, VK5AGR on 9/10 at 20:05 UTC. Since that time, 7 of the 10 the SAREX school groups have successfully completed their scheduled contacts with the shuttle astronauts and several radio amateurs on the ground have had general voice QSOs with the Shuttle Crew.

Several of the school groups have had spectacular horizon-to-horizon contacts with the astronauts with up to 23 questions answered. A total of four schools completed their contacts with the astronauts on 9/10 and three more talked to the crew on 9/11. The first school contact was with the Eisenhower Middle School in Laurel, Maryland on 9/10 at 22:23 UTC. The Goddard ARC, headed by Jim Gass, N3CJN, supported this contact. 11 students asked 22 questions with sufficient time left over for the contact coordinator and teacher to say a few words and ask a question. Rookie astronaut Jerry Linenger, KB5HBR, was at the mike for this contact and was heard to exclaim "Go Navy!!" when he heard that the teacher was heading for the Navy/Virgina football game right after the contact. The Eisenhower contact was quickly followed by a successful contact with students at the Francis Howell Middle School in St. Charles, Missouri and Shuttle Commander Dick Richards, KB5SIW. Ten students were able to ask questions and get responses from Dick during the 7.5 minute contact window. AMSAT people supporting this contact in Missouri included Rusty Baum, WB0QJB, Mike Koenig, Roy Welch, W0SL. Less than one orbit later, the Middleton Grange Middle School in New Zealand had an outstanding contact with Linenger, KB5HBR. 18 questions were answered. The event was covered by all the New Zealand national television services and was retransmitted throughout the country on VHF and on HF. Other school group contacts which have been successfully completed included the Grizzly Hill school in North San Juan, California, the Central Square Middle School in Central Square, New York, the Crystal Lake South Elementary in Crystal Lake, Illinois and the Morocco Elementary School in Morocco, Indiana.

The official Keplerian element set for today is JSC-014 This set, developed by Gil Carman, WA5NOM, at the Johnson Space Center, is provided below.

A.N.A.R.T.S. News Bulletin 826 11th September 1994

S.A.R.T.G. Worldwide AMTOR Contest 1994 Results

Poor conditions spoiled this contest with only 27 contest logs and
3 check logs submitted. We will give major placegetters only, but
will include some comments as well.

Single op - all bands 7 MHz 14 MHz
---------- ----- ------
1. VP5JM 24150 points G0ARF 1485 JA3DLE/1 7350
2. G0ARF 21280 points DL8EDC 840 LZ1MC 6205
3. SM4CMG 16640 points (ony 2) OH2GI 4200

Comments

G0ARF: It was very hard to find new contacts due to very poor
propagation, but we have to take it as it comes and make the most
of it. A lot of patience was required this year.

G4ZKJ: Pactor seems to be taking its toll of stations that were on
Amtor which is a pity.

GW4KHQ: Thanks for the opportunity to try something new. Cuagn.

VP5JM: The conditions for me were very poor -- a real shame -- I
enjoyed this contest last year but this year the results as you
can see were terrible.

LZ1MC: My first Amtor contest.

ZL2JON: I have only been operating for 17 months, and never have I heard the band so quiet. It has not improved in the few weeks since the contest either.

CQ/RTTY Journal WW RTTY Contest September 24-25

CONTEST PERIODS: STARTS at 0000 UTC Saturday, and ENDS at 2400 UTC Sunday, a total of 48 hours. NO REST PERIODS REQUIRED for any entries.

Part 2

ENTRY CATEGORIES : Single op entries may enter as a: All Band High Power or Low Power; b: Single Band: or c: Single op Assisted, All Band. Multi-ops may enter as a: Multi-op, Single Transmitter, High Power or Low Power, All Band; or b: Multi-op, Multi Transmitter, All Band.

MODES: Contacts may be made using Baudot (RTTY), ASCII, Amtor (FEC and ARQ), and Packet. (No unattended operation or contacts through gateways or digipeaters).

VALID CONTACTS: A given station may be contacted only once per band, regardless of the digital mode employed. Additional contacts are allowed with the same station on each of the other bands.

EXCHANGE: Stations within the 48 Continental United States and the 13 Canadian areas must transmit RST plus State or VE area plus CQ Zone number. All other stations must transmit RST plus CQ Zone number.

COUNTRIES: The ARRL and WAE DX Country lists will be used. NOTE: USA states and Canada areaas also count as country multipliers. Example: The first US state ans Canadian area you work not only counts as a multiplier for the state or area, but will count as a country multiplier for each band.

QSO POINTS: One (1) QSO point for contacts within your own country. Two (2) QSO points for contacts outside your own country but within your own continent. Three (3) QSO points for contacts outside your own continent.

MULTIPLIER POINTS: One (1) multiplier point for each US state (48) and each Canadian area (13) on each band. One (1) multiplier point for each DX country in the ARRL and/or WAE lists on each band. NOTE: KH6 and KL7 are country multipliers only - not state multipliers. One (1) multiplier point for each CQ Zone worked on each band - a maximum of 40 per band.

The 13 Canadian Areas are:

VO1 VO2 VE2 VE3 VE4 VE5 VE6 VE7

VE1 N.B. VE1 N.S. VE1 P.E.I. VE8 N.W.T. VY YUKON

FINAL SCORE: Total of QSO points times the total multipliers.

ARLD053 DX news

The items in this week's bulletin are courtesy of Jim, AD1C,
Doc, K0HTF, Len, W7MCU, Bob, W5KNE, the QRZ DX bulletin, Chod,
VP2ML, The DX Bulletin and the Yankee Clipper Contest Club
PacketCluster network. Thanks.

THAILAND. Fred, K3ZO, is in Thailand until October 10 and
will be signing HZ0ZAR. Check 20 meters between 1130 and
1400z. He plans to give 40 meters a try for stateside Qs.
Sunrise in Bangkok is at 2307z and sunset at 1119z. QSL via
K3ZO.

NEPAL. Kyoko, NH6RT, is active as 9N1KY. Check 14184 kHz at
1648z and 14270 at 1700. QSL via Kyoko Yamakami, Box 3,
Tokaimura, 319-11, Japan.

RWANDA. Both VE3MJQ and PA3DZN should be active any day now
from Kigali. In the meantime, try working 9X5/F5PGP on 14195
kHz at about 2030z.

UGANDA. Paul, WF5T, plans to return to Uganda and operate as 5X1XT, concentrating on CW and RTTY. QSL via his home call.

CHAGOS. Pete, VQ9TP, aka N5TP, has been busy on his favorite mode, CW. Check 18083 kHz from 1345 to 1600z. Pete operates almost exclusively between the hours of 1230 and 1630:, Tom, VQ9TT, has been worked on 14014 kHz at 1300z.

CHINA. Len, W7MCU, called ARRL Hq recently to report that BY1QH is back on Oscar 13. QSL via the 1994 CBA.

ARUBA. Contest station P40W will be rebuilt at a new location just prior to the CQWW SSB contest in October. John, W2GD, will be doing both the rebuilding and operating.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI. Email addresses for the Broadcast Officer are :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

VK2 Div. President's message.

This is Michael Corbin VK2PFQ.

This has been the quietest week on record so far, at least it was 'till Thursday. It was then that I found, when I needed a couple of cheques signed that......guess what.... the only ones who can sign cheques beside myself were ALL MISSING! One bloke is in America, he's the emergency back up signature. Another is/was, in Singapore, who knows. Nobody bothered to tell me. Another has disappeared without trace.... He's the Office Manager no less. I think he is on holidays ...I knew that he would not be here next week but.... The last one had a fax machine on his 'phone. I thought that was a novel idea, particularly since most people dislike talking to answering machines.... but what happens if you don't have a fax machine or you ring on a normal phone and it beeps at you. It's one hell of a way to run an Institute...Isn't it?

All this came about because we still don't have any keys. The Security Officer was asked to get some cut but he disappeared on holidays. The Office Secretary, Mrs. Morris is on sick leave and there is only one set of keys between 5 councillors. The other 4 councillors however ALL have keys, and keys to everything. Oh yeah there was another problem too. All the people who knew the combination to the safe are the same few who have keys .... perhaps with one exception... Hmmm. Can't get into the Office, can't get a cheque signed... even if we could get into the office we can't get a cheque because the book is locked up in the safe....

I wonder if these things are engineered....no. They just happen.... Don't they!

Some people say I knock the opposition too much... but what am I supposed to do, make 'em out to be a bunch of angels, when by their actions, they indicate they are the exact opposite?...What would you do?

The reason we have not bothered to get these keys before today, was because there was co-operation... that's ceased. New barrels for locks about 14 of them @ $26.00 each that's $364.00 plus $48.00 service call and key copies @ $7.20 each ..9 councillors times 3 that's about $600.00 we thought we might save the cost...by spending about $90.00 on extra copies.

Anyhow it didn't matter Peter Kloppenberg. VK2CPK our acting secretary, used one of his own personal cheques. Don't be alarmed at this Acting Secretary stuff... Peter's normal title is Assistant Secretary. But since nobody has told us, including himself, when to expect Mr. Harrison back from Singapore, we really didn't have much choice.

As to the position of Office Manager... that's a story in itself, but I'll save that one for another time.

This coming Friday there will be a meeting of the Council. As before this meeting will be an open meeting... all are invited to attend... that's members ONLY of course. At the last meeting I had no less than three tape recorders on the "Official table". I wonder why. The only one who really needs one is the Minute Secretary... she does not have one. The antics of these "Recorders of History" was at times comical. Those who come this time should not expect the same entertainment .... I've "outlawed" the use of tape Recorders at all future meetings. It's really ridiculous when you come to think about it.

Five people on Council agree that all meetings of Council should be held "in the open". We believe.... It's YOUR INSTITUTE, and YOU have a right to know what's going on. There will, of course, be matters which should be dealt with confidentially... can't think of one at the moment... but, should the occasion arise, then the Council will go into the smaller office.

Meetings will continue to be "open" as long as the gallery behaves themselves. If the last meeting was any indication, then I don't expect any trouble. I wonder what the problems was with the previous Council?

I almost forgot... we have a couple of vacancies on our Broadcast team. Jim Walker VK2XJW has decided to call it a day, and I reckon that's fair enough considering all the things he does at the moment. Only for Jim there would not have been any Broadcast after the closure of the Station here at Dural by some members of the previous Council. Almost single handed Jim kept the Broadcast going, along with his many many other duties. I think his last rostered shift made him realise that he was over extending himself. He went straight from Dural to Parramatta to do some examination supervising. Thanks Jim..... A job well done!

Thanks also to Dave Barry VK2CFB for his help in the past. I am informed his work situation has changed. Dave was also one of those who stuck through all the trouble.... Dave, I'll keep your seat warm for when you come back. Will all volunteers please contact Steve Pullan or myself.

I bet those late item people had a heart attack last night when they tried to fax something to me. I had forgotten to change the plugs back.....it's a bit of involved story. Anyhow I fixed it up when I

came home around midnight. Gentlemen you will be pleased to known all late item are included in this weeks Broadcast.

See you next week.

Federal News

Radio direction finding championships

Frank Sleep VK4CAU has provided an update on our July WIA NEWS item on the upcoming radio direction finding championships in Europe.

This competition is to be the 7th World Championships, not the Region 1 Championships, as previously stated. Frank VK4CAU will be attending as Australia's only competitor, apparently the first time Australia has been represented in any world championships.

Radio Sport is coming to Australia, says Frank, probably first to VK4. It seems the Townsville Amateur Radio Club is considering submitting a proposal to conduct the next Region 3 ARDF games here. Frank suggests we need a Federal ARDF Coordinator, saying it would be a tremendous boost to the WIA if the Year 2000 World Championships could be held in Australia, perhaps as a demonstration sport for the Olympics.

[We have since been informed that it will NOT be a demo sport - DH]

Divisional News

WIA Morse class

The next Morse class at W.I.A. Parramatta will commence on the 28th September 1994 at 7pm, providing there are enough students attending.

Could any one interested in attending this course please contact the Office and leave your name and phone number with Mrs. Morris, or on the answering machine at any hour.

Jim Walker VK2XJW
Education & Exam. Coordinator

Attention all club examiners

The WIA is interested in creating a register of coming examination dates for all of New South Wales. Consequently we would like to hear from all clubs, affiliated or otherwise, reagarding their coming examination dates for all levels and types of examinations. This should include costs, closing dates, etc. Please fax the details to the Broadcast Officer, Michael Corbin, on (02) 626 6066. If you do not have access to a fax machine please phone on (02) 626 9288.

So far we've only had one response, so please get cracking there, examiners.

Note to clubs: requesting for clubs to send two faxes next week. One with tour club information and the other, details of your examinations.

WICEN News

The Sydney WICEN 2m repeater has had its cavities re-aligned, and objective reports are welcome. Thanks go to Bob VK2CAN for his assistance. Unfinancial members are reminded that their membership will officially terminate on 30th September.

The only exercise this month is the Kelloggs Cycling Challenge, on the 18th of September. The event co-ordinator is David VK2KLX. Looking ahead to October, there is the VRA Annual Conference on the weekend of 8-9th October, to be held in Wagga, and further details will appear in a later broadcast. The "Hawkesbury Classic Paddle" is on the weekend of 22nd-23rd Oclober; and as before, Kevin VK2CKD is in charge. The WICEN Co-ordinators conference will be held at Bathurst on the weekend of 29-30th October, and the format will be that of a training Seminar with emphasis on Regional administration, and Operations with a short business session. Naturally, all members are invited to participate.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to either VK2AAB or VK2OP BBS. Alternatively, you can use the WICEN telephone BBS on (02) 888-2763, which is available at speeds from 300 bps to 14,400 bps.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This month's item refers to the September issues of these magazines.

"Electronics Australia" features an article by Tom Moffat VK7TM about whether Morse code is really dead; Neville Williams VK2XV continues his series on the development of radio and television; and a simple pre-amp for scanner listeners is described, as is a simple micro-controller project.

"Silicon Chip" describes the TEA1100 fast nicad charger chip; an automatic discharger for nicad battery packs is described; a simple VOX switch is built; a long-wave weather information receiver is constructed; and Garry Cratt VK2YBX shows how to use the various satellite elements and the programs that use them. The final article on building a " dual-diversity" tuner is also interesting in that it describes how to align a receiver with a "magic wand".

"Amateur Radio" continues their discussion on beam antennas with bent elements, this time with a lot of theory; describes some interesting hints and kinks; and continues their series on the FM-828 circuits.

"Amateur Radio Action" concludes their article on getting the most out of commercial antennas; discusses weather satellites and remote imaging; and describes the new G-TOR protocol.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

News briefs

Have you ever had a prolonged stay in hospital? If so, you may have taken along your 2 metre handheld to chat on the local repeater. It's a handy way to break the monotony of being confined to a hospital bed. However, if the Therapeutic Goods Administration has its way, you might not be able to do it on your next visit.

The TGA has raised concerns about the effects of radio frequency interference caused to sensitive medical equipment and is urging hospitals to ban the use of mobile phones and, presumably, other transmitters.

This follows a recent report by the United States Food and Drug Administration which said that RFI had caused equipment failures in patient breathing monitors, anaesthetic gas monitors, and even power-driven wheelchairs.

Studies by Telecom's Research Laboratories at Melbourne's Monash Medical Centre and others indicate that heart-monitoring equipment and drug infusion pumps could also be affected. The researchers highlight reports of similar problems in Europe and Canada.

They recommend that mobile phones and other radio transmitters not be used within 2 metres of any electronic medical equipment, that they be barred completely from intensive care areas.

If it's any comfort, amateurs aren't the only ones who would be put out by such a ban. Many doctors make extensive use of mobile phones to keep in touch with their patients and they have protested to the TGA over the proposed ban.

Thanks to the Sydney Morning Herald

If your local or regional paper runs an item of interest to Amateur radio why not send a clipping to the Divisional office.

from Richard Murnane VK2SKY

IPS WEEKLY REPORT

COURTESY OF IPS RADIO AND SPACE SERVICES, SYDNEY

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

CLUB NEWS

Waverley Amateur Radio Society (Inc.)

Members of the Society and others interested will be pleased to know that the committee has negotiated the lease on permanent pre-

mises for the Society that will allow 24 hour access. Full details will be notified at the next monthly meeting on Wednesday the 21st September at the current venue in Waverley Council's Multi-Function Centre located at 31 Spring Street, Bondi Junction.

The meeting will begin at 7:00 pm where the main topic for the evening will be a talk by Aub Topp (VK2AXT), the W.I.A. Librarian who will tell us about the facilities offered by the library.

Parts for the Society's low cost modem will also be available at the meeting.

Submitted by Eric van de Weyer VK2KUR

Central Coast Amateur Radio Club lecture night

The subject for the Septmber Central Coast Amateur Radio Club Lecture Night is "Modern commercial two-way radio practices", and this lecture will be presented by Ray Wells VK2TV. Ray has had many years' experience in the field of commercial two-way radio. He is the manager of his own consultancy and installation company and has been involved with many organizations operating a diverse range of networks.

Ray will describe modern techniques in commercial two-way radio services and how commercial operations have been revolutionised in recent years. many of these techniques are equally applicable to amateur radio.

Free tea and coffee will be provided and visitors are most welcome.

Bob Fitzgerald VK2XRF CCARC Publicity Officer

VHF-UHF DX Group

The next VHF-UHF DX Group meeting will be held on Tuesday 20 September at Amateur Radio House. This meeting will be an equipment workshop on the construction of high power linear amplifiers and low noise preamplifliers.

Working examples of linears and preamplifliers will be exhibited to demonstrate how practical construction problems are solved.

All listeners are invited to attend.

The Group also sponsors activity nights on 144 MHz on Tuesdays and 70 centimetres on Thursdays.

Why not check into the Group's Sunday evening net on 146.5 MHz FM for details of Group activities. The Sunday evening net starts at 8:15 pm.

Submitted on behalf of Richard Sourlie VK2ARS

FROM THE ST GEORGE AMATEUR RADIO SOCIETY

Just a final reminder from St. George to members and other interested amateurs that next Saturday the 17th of September the society will be holding its annual Bill Shakespeare Auction.

The auction will be held at the normal meeting venue, that is in the 1st. Allawah Scout Hall corner of Bellevue Pde and Blakesley Rd, South Hurstville.

Equipment for the auction will be accepted between 10 and 11am.

Viewing of equipment between 11 and 12noon.

Auction to start at 12noon sharp.

Credit card facilities are expected to be available for those requiring this facility and the snack bar will be open during the course of the auction.

Inquiries regarding any specific details are welcome, please phone Publicity Officer, ALLAN VK2XF at home on 533-1006.

de Allan VK2XF, Publicity Officer.

Parramatta Amateur Radio Club

Just a friendly reminder to club members and guests that the next meeting of P.A.R.C. will be held on Thursday 15th September at the WIA headquarters, 109 Wigram Street Parramatta -- time 7.30 local.

This is our practical meeting night and we hope to show off the completed club repeater and announce the callsign and commissioning date and time. So if you want to check it out before it goes into service, be there.

As usual, tea, coffee and biscuits and a good talk can be had by everybody.

from Jim Walker VK2XJW

Liverpool and District Amateur Radio Club

The Liverpool club is holding its AGM next Tuesday night ast 8 pm. All members and guests are welcome -- and here's a thought -- all members bring a guest and get them to join.

We won't be holding a foxhunt on the evening but we will be commencing mobile foxhunts soon and we could do with a little help from keen foxhunters.

So see see you there at the Scout camp, Cambridge Avenue Glenbrook (? -- Glenfield?) 8 pm next Tuesday night.

from Brad VK2QQ for the Liverpool and Districts Amateur Radio Club

Wahroonga

The Wahroonga Amateur Historical Radio Association will hold a meeting of members next Sunday 18th September at 3 pm to discuss and set rosters for operating the special event callsign VK2WAH on Thursday 22nd September, commemorating the anniversary of the first radio message from the UK to Australia.

Other amateurs who are interested in operating are also invited to attend. The meeting is at 59 Westbrook Avenue Wahroonga at 3 pm and afternoon tea will be served.

For more information contact Jo Harris VK2KAA (02) 489 4393.

from David Ramsay VK2KLX, Secretary

Manly-Warringah

The Manly-Warringah Radio Society is calling Sydney amateurs north of the Harbour.

Their lecture night is next Wednesday 21st of September at the Warringah Volunteer Services Centre Terrey Hills. This month's lecturer will be the club's resident CW expert Vic Joyce VK2EVJ who will talk on the subject of Morse code and high frequency antenna design.

The Manly-Warringah Radio Society meets every Wednesday night with a business meeting on the second Wednesday and lectures on the third Wednesday of the month. Visitors are always welcome.

If you need help to find the club rooms just call in on VK2MB on 146.875 MHz. For more information on the Society, call the Publicity Officer Richard VK2SKY, available on (02) 971 4431 a.h.

William J Turner (wjturner@iastate.edu) wrote:

: In article <CvoFpF.GL5@news.Hawaii.Edu>, jeffrey@kahuna.tmc.edu (Jeffrey Herman) writes:
: |> 600,000 hams each with their own repeater would use 1.2 million
: |> frequency channels, not counting the frequencies needed for control.
: |> They would be using three times the needed spectrum and certainly more
: |> power than needed to carry out their desired QSO.

: OK, but does this mean that a ham who wants to put up a repeater does
: not have the right to do so? Most hams won't because of the expense
: involved, and many also don't care about repeaters, but I don't see why
: they don't have the *right* to do so. It might not be practical,
: or even feasible, but I don't think this means they don't have the
: *right*.

: Having the right and exercising it are different things.

Having a right and having a PRIVILEGE are two different things. I've never
seen putting up a repeater listed in the Bill of Rights (Neither is freedom
of expression, but that's another story). Remember that amateur radio is
a privilege granted you, not a right. CB is a right :-) Hams have the
privilege of being able to erect a repeater, but also carry the burden of
not interfering with other hams and pre-existing repeaters. That part of the
privilege/responsibility pair seems to get lost all the time....

Passed NCT on Saturday. The wait begins. Thanks to all for
their help over the last several months.

An Extra friend of mine donated his "No-Code Plus" to me
in hopes that I'd study. Now that I passed, I'd like to
trade it with someone for a General study guide. So, if
any Generals (or up) out there know someone they'd like to
help with my book, please drop me a line.

I'll accept straight donations as well, of course. :)

Thank you.

Jim Mccrary (jmccrary@delphi.com) wrote:
: I'm a HAM wanna-be (currently studying for the exam). Wondering about
: the pros and cons of a roof mounted antenna system for 2 meters. Seems an
: antenna on top of a 2 story house would be fairly effective. Are there
: any particulars (grounding, wind, etc) of which I should be extra careful?
: Thanks for the help!

Welcome to amateur radio! Roof mounting antennas for 2m is certainly an
easy and effective way to go, but it does have its problems. The proximity
of the antenna to the house increases the likelihood of RFI in TVs, VCRs,
toasters, etc. (I've actually had a toaster talk to me - strange!) Another
biggie is safety - make absolutely sure the antenna, feedline, mast, etc
can't come in contact with high voltage overhead wires!!! 20kV could hurt
real bad :-). As far as running the coax, make sure what you use is OK for
UV and weather exposure - some cheap coax will degrade severely under sunlight.
Also be sure that connections at the antenna itself are watertight and won't
corrode - corrosion can cause high SWR and damage to unprotected high-power
transmitters. Check with your local codes and the ARRL handbook (you've got
one, right?) about grounding issues, etc. Good luck - hope to hear you on
the air!

GB2VK

On Sept 22nd 1994 the Dragon Amateur Radio Club (North Wales) will be operating GB2VK to commemorate the 76th anniversary of the first direct wireless message between UK and Australia.This was sent from the Marconi Company station at Waunfawr near Caernarfon,North Wales to Wahroonga,NSW.

The station which will be on air from 0001-2359Z will be set up in the original station buildings at Waunfawr and will operate simultaneously on SSB and CW.Target freqs are:
CW.....14.020 SSB.....14.170
21.020 21.170

plus local 80/40m activity (10m if open..)

The above freqs will be +/- QRM but will depend on conditions.It is hoped to run a packet station on site and to post operating freqs on the DX Cluster network.

We hope to contact VK2WAH at the Aussie end at some time during the day but any/everyone is invited to call in; a special QSL is being issued.Please give us a call...the old building is cold and drafty so we will need plenty of activity to keep the spirits up!

From: gbrush@indy.net
Message-ID: <gbrush.13.000969B2@indy.net>
Source record: 260232

Hi!

A few of us with experience only in HF/VHF were discussing operation in the 1.2GHz band and specifically just how far (or not) one could transmit with the typical HT operating on 1 or 2 watts with a rubber duck style antenna.

It's obviously going to be very line-of-site sensitive, but in practical terms, in a moderately flat and forested area, are we talking hundreds of yards or a a couple miles?

I'd like to hear from some people with practical experience in settings such as this.

Thanks!
Greg

3983. ZAPPING dead Nicad Packs with my quick charger??

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-12 14:54:58 UTC
From: cropley@cbnewsf.cb.att.com
Message-ID: <Cw0urM.5E9@cbfsb.cb.att.com>
Source record: 260234

I have a HT that has not been charged in over a year. When I put it on
the quick desktop charger. The FAST (red) led only lights for a spilt
second and then goes to SLOW (green) even after an hour this yield
no results. I broke out my volt meter (keep in mind this is an 11 v 500mah
pack) and test it. I was getting a reading of 1/2 volt and 20 mah.

I noticed (upon disassembling the quick charger - darn curiosity) that
there was a switch wired in the secondary windings. Sure enough
I read 12 volts in 1 switch position and 24 volts in the other.

QUESTION. Can I "ZAP" my pack by leaving on 24 volts for a while??

Also curious as to Y the charger steps down to slow / trickle charge
so quickly??

Thanks,

Andy C

Joe Lynch, N6CL publishes a column in CQ every month that specializes in operating. Joe recently has published an introductory book on VHF through microwaves that is very comprehensive. It is advertized in CQ and I recommend it to those that want to know if there's anything on VHF other than the local repeater. Joe frequently lists his e-mail address in his CQ column. There are other sources of info including columns QST and 73 magazine. There are several specialized VHF through microwave clubs in the coun try including the Rochester (NY) VHF Group, New England Weak Signal Group, North Texas Microwave Society, San Bernadino Microwave Society and The Mt. Airy VHF Radio Club (the one I'm associated with) and many others. If there's interest, I can provide names, addresses, etc for these and other groups.

3987. Tesla coils

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-12 17:53:42 UTC
From: leggett@xi.cs.fsu.edu
Message-ID: <3524j6$s30@mailer.fsu.edu>
Source record: 260252

O.K. O.K. O.K.. I know Tesla coils have little to do directly with amateur radio but I couldn't find a newsgroup along the lines of rec.electronics to post this. I never got into amateur radio (though I do work at a college radio station) but you radio people always seemed to dig HIGH VOLTAGE!! ZAP! Woah, feels good...

I've built several tesla coils in the past and am planning to build one much larger than any I've previously built. I've got some ideas on how to overcome some of the problems that I experienced in the past as well as a few questions that require some explanation before I begin anew (sp?). If anyone here has any experience with Tesla coils, knows anyone who does, knows a good info source, or wishes to enlighten me as to the presence of an electronics newsgroup (flame, flame...) -- please e-mail me. All help is MUCH appreciated. Thanks...

3988. License Turnaround Time

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-12 18:26:59 UTC
From: ang@incyte.com
Message-ID: <Cw14L0.3xo@incyte.com>
Source record: 260242

Just got my call sign (at last)! Here are the stats for those of you keeping track of their own licenses--

Date test taken: 7/17/94
Effective date: 9/1/94
Date mailed: 9/8/94
Date arrived: 9/10/94

Total time: 7 weeks, 6 days

I should also mention that I took my test with an ARRL group who were pretty up on getting the paperwork to Gettysburg with all due haste.

Good luck to those still waiting!

Angelo Delegeane, KE6LXA [Tech-Plus]

In article <gbrush.13.000969B2@indy.net> gbrush@indy.net (Greg Brush) writes:

>A few of us with experience only in HF/VHF were discussing operation in the
>1.2GHz band and specifically just how far (or not) one could transmit with the
>typical HT operating on 1 or 2 watts with a rubber duck style antenna.

Well, keep in mind it's not a "rubber duck" shortened antenna, since
a full size 1/4 wave is only 2 inches long (in fact my ICOM 12-GAT came
with one about 5 inches long, which I guess is a 5/8 wave.)

>
>It's obviously going to be very line-of-site sensitive, but in practical
>terms, in a moderately flat and forested area, are we talking hundreds of
>yards or a a couple miles?

Seems to work about as well as a 2 meter or 440 HT. I have no
problem hitting high level repeaters 20 miles away. In forests
through trees there might be some absorption problems, though
I've never noticed any. It is prone to "dead spots" (multipath
nulls, a/k/a picket fencing). Moving a few feet can make
quite a difference. On very hot days, it can be hard to hit
the repeaters -- convection currents in the air (the equivalent
of the optical heat "wiggles" one sees on hot days.)

> "E" version D2 is removed? Do I need an extra tone module for 1750Hz in
> order to get into European repeaters or is this a done deal after removing
> D2?

There are two parts to this question, 1) the presence of 1750Hz and
2) the suitability of a TH78A for use in Europe. As to whether 1750
is or is not present in the TH-78A, I suggest that you just press F-tone,
rotate the tuning control and see for yourself whether 1750 comes up
between 250.3, the highest PL and 67.0 the lowest.

There is another difference between the 78A and 78E and that is the key
layout. In the 78E the small button between PTT and MONI is the TONE, and
this allow access to tone burst even with the keypad closed or soft cover
on. In the TH-78A that button is CALL. This makes the 78A difficult to use
alone with a tone burst repeater. The solution is to get a speaker-mike
with function keys and then you can program a mike key to be TONE.

Our local ACE hardware store carries small pieces of copper, brass and
aluminum sheet. I've bought some which was 0.060" thick, didn't even
look if they had anything thicker. It's probably worth a look see.

I thought I remembered hearing something about the fcc having a telnet site...I can telnet to FCC.GOV, but can't get past the password.

At some point, it'd be nifty if they had an on-line, up to the minute way for us to check license statuses, as they entered them into their computers. But then this is .gov not .com. Oh well.

Message-ID: <Zm3x38k.jim3804@delphi.com>
Source record: 260247

From: Jim Clark KB0FIR <JIM3804@delphi.com>
I have used for three years, until I moved a Mosely TA-32JR on a 36 ft.
push-up mast. Also used Alliance U-110 TV rotor. Bracketed the mast to
the side of the house with a Radio Shack mounting bracket, and guyed the
upper two sections including the top. Worked 245 countries barefoot! If you
mount
the mast to the side of the house, and get up on the roof and push the
antenna up, you Only took it down because I moved. Worked great! Would not
recommend an antenna larger that a 2-el t
ribander. Quads are hard, cause you can't guy the mast at the top because of
the quad. Email me if you would like more info. Make sure to ground the mast.
Worked for me for 3 years in FL! 73, Jim

I thought that I would add my 2 cents worth in. One year ago today I passed my no-code technician. I wanted just to use 2m and had no desire to learn code. While I was waiting my 12 weeks for my license to arrive I got a chance to see someone who knew how to send code in action. This guy was sending about 18 wpm making contacts (Seemed like 50 wpm to me at the time!). After some casual observing I realized that this guy was blind. I though how neat, so I started learning my code, well within 4 months I had managed to upgrade to 13 wpm. I am now and Advanced and love it.

Anyway some were wondering about using the computer to learn code. This is in my opinion the worst way possible! Don't get me wrong I love computers, I work with them 80 hours a week (programming, configuring etc.) and I thought that if I could mix my well rounded computer knowledge with code I could get it done faster. BUNK! Get the tapes and learn it that way! Or better yet I had more incentive at this time to learn code, I bought the most expensive type of code practice oscillator you can get - An HF rig!!! That will sure put the bug in you. (No pun intended!) . Just though I would pass my two cents along, Do it the way the OLD-TIMERS did it. Listen to it on the air, it is a whole heck of a lot different that what the computer spits out at you!

thanks for listening to my babbling...

Very good points, Paul. I can not over emphasize the importance of on-the-air listening or operating...perhaps not so much to learn the code, but to become _proficient_. Without proficiency, code is not much fun, and can be a real bore!

I got my Novice in 1961 (age 11-12). At that time, the Novice license was for one year only, non-renewable, and once held, it could never be held again. It carried NO voice priveleges at all on HF. So one was forced to use CW and to upgrade, or to leave Ham Radio. That's what I did (left ham radio)...because the Theory and my 12 year old brain were not compatible! But by the end of the year I was able to send code on a hand-key at 15 wpm and copied even higher. It was fun!

It was not until 1975 that I got back into ham radio. But the code was still there!...just like riding a bike! Today, 90 percent of my HF operating is code, and of course speed and proficiency are much greater...and it is still great fun.

The best way to _learn_ the code is any way that works for you. The best way to _increase your speed and become proficient_ is to USE it! Pass the Novice or Tech-Plus, and get on the air! Don't talk about computers and code tapes on FM or SSB! Talk about them on CW!

i don't know your age, Paul, but you have the enthusiasm of youth!
Have fun!

NOTE: The Effective Sunspot Number for 11 SEP 94 was 27.1.
The Full Kp Indices for 11 SEP 94 are: 3o 4+ 4o 3- 3- 3o 3- 2o
The 3-Hr Ap Indices for 11 SEP 94 are: 16 35 28 14 13 14 12 8
Greater than 2 MeV Electron Fluence for 12 SEP is: 1.4E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. There was no significant
activity. No new Regions were numbered.

Solar activity forecast: solar activity is expected to be
very low.

STD: A full-disk Yohkoh x-ray image has been appended to this report.

The geomagnetic field has been at quiet to active levels for the past 24 hours. High latitude stations observed short periods of minor storming. Energetic electron (GT 2 MeV) flux was in the high range for the entire period.

Geophysical activity forecast: the geomagnetic field is expected to be quiet to unsettled for the first 24 hours of the forecast period, then unsettled to active for the remainder. Activity is anticipated because of an expected CME induced shock due on the 14th and a small coronal hole moving into a favorable position by the 15th. High latitude stations may experience periods of minor storming for the entire forecast period.

Event probabilities 13 sep-15 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 13 sep-15 sep

A. Middle Latitudes
Active 30/35/35
Minor Storm 15/15/15
Major-Severe Storm 05/10/10

B. High Latitudes
Active 30/35/35
Minor Storm 15/15/15
Major-Severe Storm 05/15/15

HF propagation conditions were near-normal over all regions. High latitudes continued to experience periods of minor signal degradation although overall signal quality was near-normal. Similar near-normal propagation is expected until 14 or 15 September when high and polar latitudes may again witness increased periods of minor signal degradation.

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
11 Sep: 0427 0505 0629 C8.7 SF 7773 S13W73 II,III,Continuum,Loop

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

SPECIAL INSERT: YOHKOH FULL-DISK X-RAY IMAGE
---

12 September 1994, 04:00 UTC

Admission is $4.00, kids under 12 free. ARRL sanctioned; Handicapped
Access; Door prizes; Refreshments; Ample parking; Rain or shine.

Talk-in will be on the 147.12 Danbury repeater, +600, PL 141.3.

Come one, come all, enjoy some fun, and maybe get a great bargain!

See you at the Western CT Hamfest.

Jim

They supplied us with a M14. I'm ready to rock and roll. There's
this real good machinist. He's a Class III gunsmith, but he's not too
picky about that.

4013. Boatanchors and QRP email lists

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-13 08:10:05 UTC
From: jeffrey@kahuna.tmc.edu
Message-ID: <Cw26ot.n1M@news.Hawaii.Edu>
Source record: 260281

For those of you who have been, over the last several months, trying
to subscribe to the `Boatanchors' tube radio email reflector
you can now ftp each day's digest of articles as follows:
ftp sunSITE.unc.edu and
cd to pub/academic/agriculture/agronomy
and `get' DAILY.BA

For those of you who unsubscribed from qrp-l because there is
no longer a daily digest do the above and `get' DAILY.QRP to
receive each day's digest of qrp-l articles.

Thanks go to Steve AB4EL for supplying a site.

Jeff NH6IL

4014. Info about book "Keys, keys, keys"

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-13 08:33:18 UTC
From: fro@xs4all.nl
Message-ID: <353o4f$hsb@news.xs4all.nl>
Source record: 260280

Hi all!

As a CW enthusiast, I got interested in a book about Morse keys. The book's simply called "Keys, keys, keys" and is written by Dave Ingham, K4TWJ.

Unfortunately, I've got no other information besides title and author. Could anyone tell me the publisher and/or the ISBN? And maybe you know some European outlet or club that sells the book?

Thanks in advance, 73,

Frank, PA3FLV
fro@xs4all.nl

4015. Software for test prep

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-13 08:38:32 UTC
From: tedwards@eng.umd.edu
Message-ID: <353oe8$ggi@mojo.eng.umd.edu>
Source record: 260283

Is there any public domain or shareware programs that help prep
people for ham radio exams? (either for PC (preferable), Mac, or
for Unix) Do they have the updated testing pools?
Where can I find them?

-Thomas

SB SAREX @ AMSAT $STS-64.012
STS-64 Western R/S Times 09/14

Below are the rise and set times for STS-64 for selected US cities
over the next three days. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note
that all times are in UTC.

Rise= time (HH:MM:SS) the Shuttle Orbiter appears at the horizon
Az= Azimuth (true) where the Orbiter will rise.
Maximum= time, azimuth (Az), and elevation (El) of the highest part of the pass
Set= time and azimuth when the Shuttle descends below the horizon
Orb= the number of this orbit
Rise MET= The Mission Elapsed Time at the rise. Format is DD:HH:MM:SS

I'd be very pleased to see a newsgroup dedicated to VHF/UHF/Microwaves. Especially Microwaves (>1GHz).

FAQs: I did start compiling a Microwave FAQ (assisted by G8KMH) some months ago, but temporarily stopped due to more pressing matters, like upgrading the 24GHz gear, and operating portable over the summer. But I do plan to continue this - so if any one wanted to email me contributions it will spur me on to make more progress, and I'll post what I have so far in a few weeks.

You can always keep your callsign. You probably have to change
something to get the application processed. Change your address
in some nominal way, like changing Ave. to Avenue, or vice versa.

Screw the tapes! As soon as you have passed the 5 WPM you should
be slugging it out on the novice CW bands. Looks like you already figured
that out Paul. On the air operating is more interesting and instills a
genuine appreciation for CW. Tapes and computer generated practice
are boring and make the code a chore.

I only wish I could type the code better as I copied, it would make
contesting much easier and increase my rate if I could type those calls
faster into the log.

Have a ball Paul, sounds like you already figured out how to do it.

pbp@crl.com (Paul Pescitelli) writes:
: I thought that I would add my 2 cents worth in. One year ago today I passed my
: no-code technician. I wanted just to use 2m and had no desire to learn code.
: While I was waiting my 12 weeks for my license to arrive I got a chance to see
: someone who knew how to send code in action. This guy was sending about 18 wpm
: making contacts (Seemed like 50 wpm to me at the time!). After some casual
: observing I realized that this guy was blind. I though how neat, so I started
: learning my code, well within 4 months I had managed to upgrade to 13 wpm. I am
: now and Advanced and love it.
:
: Anyway some were wondering about using the computer to learn code. This is in
: my opinion the worst way possible! Don't get me wrong I love computers, I work
: with them 80 hours a week (programming, configuring etc.) and I thought that
: if I could mix my well rounded computer knowledge with code I could get it done
: faster. BUNK! Get the tapes and learn it that way! Or better yet I had more
: incentive at this time to learn code, I bought the most expensive type of
: code practice oscillator you can get - An HF rig!!! That will sure put the
: bug in you. (No pun intended!) . Just though I would pass my two cents along,
: Do it the way the OLD-TIMERS did it. Listen to it on the air, it is a whole
: heck of a lot different that what the computer spits out at you!
:

I don't agree - I found that to learn the code a computer was the best way. If you
are trying to learn the code and listen on the air it was hard to find code that
was sent well at the speed that you needed. By using SM you could have it send
the code to you and you had to tell it what letter it was. I found this the most
effective way to LEARN the code. You got good quality code when you wanted it.
In addition you learn by sound, not you sitting looking at a paper or what ever
saying to yourself dit da is "a".

Now after you learn CW it is all different. Once you can sit down and copy code
the best way to improve your speed up is get on the air and use it,
NO QUESTION about that for me. But again to first learn the code I found that
using a computer really helped.

: thanks for listening to my babbling...

4030. 1750 Hz tone generator in Yaesu ft-26?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-13 14:29:13 UTC
From: burrus@cmu.unige.ch
Message-ID: <1994Sep13.162913.1@ugcmu>
Source record: 260272

Hi everyone.
I am living in Europe and using an American model 2-meter
handheld (Yaesu ft-26).
Over here, one needs a 1750 Hz tone burst to open the repeaters.
Does anyone know if there is a mod to transform a US version ft-26 -> European
version (with built in tone generator to open the receptors)

Thanks for any help.

Christophe.

: How about filling the last foot of the 9913 with polystyrene cement
: or the silicon RTV goop to keep water out? Also, for flexibility,
: can one splice a 5 or 10 foot length of RG-8 on the end of a 9913 run?

You could fill the last few feet with some sort of goop if you don't
mind an impedance lump caused be a different Zo for that length of cable.
Anything you put in there will change the dielectric constant, and hence,
the impedance of the cable.

Just the opposite worked for me. I had the tapes "memorized" about the
second time through, so they didn't help much for test practise. :(

I increased my code speed and proficiency much faster using the computer
program Morse Academy. Also listening to W1AW helped alot.

As for on the air QSO's....These didn't help me pass the code elements
though they were a lot more fun!!

Ken

You're assuming that all 600,000 repeaters would be in use at the same time.
If all the existing hams tried to use simplex channels simultaneously, you would
have problems, too. We share frequencies all the time. I see nothing wrong with
every ham putting up his own repeater. Just ensure that it only gets activated
when an operator intends to activate it (via CTCSS tones or somesuch.) Then it
would be up to the *users* of the repeaters to cooperate to avoid interference.

>: OK, but does this mean that a ham who wants to put up a repeater does

>a privilege granted you, not a right. CB is a right :-) Hams have the
>privilege of being able to erect a repeater, but also carry the burden of
>not interfering with other hams and pre-existing repeaters.

I don't see anything in part 97 about a pre-existing repeater having any
special priviledges over a new one. A non-coordinated repeater will have
primary (not total) responsability for eliminating interference with a
coordinated one, but other than that, one station does not have priority
over another. (And if you can get your new repeater coordinated as well...)
All hams have the responsability to avoid interference with each other through
cooperation. It's not a one sided deal.

> That part of the
>privilege/responsibility pair seems to get lost all the time....

And saying "I was here first" does not nullify that responsibility!

-Brian Suggs

Source record: 260285

In article <34di6t$736@rain.org> leigh@rain.org (Leigh) writes:
>For several years, I've used 147.555 mHz for local FM simplex with a small
>group of friends. Most of the time the frequency was clear of QRM.

You were fortunate...

>
>But recently a _repeater_ with aparrently high coverage in the Los Angeles
>area has appeared on 147.555, and QRMs our ragchews in Santa Barbara.

There are several ways to deal with this.
1. Move to a different frequency.
2. Use directional antennas to reduce or eliminate the interference.
3. Have your QSOs when the repeater is not so active.

>
>This repeater uses 146.535 as an input. Both 147.555 and 146.535 are listed
>as FM simplex frequencies in the ARRL band plan.

I have heard that for many years there have been no available
frequency pairs for repeaters on 2 meters in Southern California.
Therefore, if more repeaters are to be put on the air, some
underutilized simplex frequencies could be used. Since no one has
a "right" to a particular frequency, any interference problems that
arise would have to be dealt with among the affected parties.

>
>This repeater's ID'er uses the callsign of W6FP.
>
>Getting tired of the interference, I got on this repeater, and nicely
>complained to one of it's control operators. He was fairly courteous;
>he invited me to use the repeater, and apologized for the interference,

Why should he have?

>
>I informed the control operator that both 146.535 and 147.555 were intended
>for FM simplex, under the ARRL band plan. He stated that several local ARRL
>Official Observers had approved the non-standard repeater frequencies.
>
>Do the "suggested" Band Plans have any meaning any more?! What next: FM
>packet nodes on 144.200 or CW QSOs on repeater inputs?

As our bands become more populated, flexibility and understanding will
become watchwords for dealing with the inevitable interference problems.
The ARRL band plans are nothing more than suggestions for utilizing our

available spectrum. The FCC dictates what modes can be used on a
particular band of frequencies - after that, it is up to us to use the
spectrum in efficient ways. In some parts of the country, the ARRL band
plan may work well, but in other parts of the country, perhaps not.

>
>Yes, all of the conventional 2 meter repeater pairs in Southern California
>are all used up, and repeater-to-repeater interference is common. But does
>every Ham have a right to have his own repeater? With our crowded,
>limited VHF spectrum, I believe we all should use FM simplex or SSB
>whenever possible.

The reality is that many, if not most people that are active on 2 meters
are using hand-held transceivers with small antennas. Except for close
proximity situations, simplex operation is just not as effective or
practical as communicating through a repeater system.

>
>Evidently, the local "co-ordinating" group for 2 meters in California, TASMA,
>is having some organizational problems, and will not currently be of much
>help, or so I'm informed.

Apparently, the group that put this repeater on the air was not dealing
with TASMA.

>
>Any comments or suggestions? While your area may not currently have such
>problems, it may soon happen, due to the tremendous popularity of the
>No-Code license.

Think about using another frequency for your local ragchew group.
There must be plenty of space available on a band that is 4 MHz wide.
Good luck.

>
>Thanks for reading and 73 from Leigh/KM6JE in Santa Barbara.

I got my Tech+ in January 94, a few months before FCC officially
recognized "Technician Plus" by printing it on your license.

Can you re-submit form 610, with your CSCE for 5WPM CW and get
a new printed license that says "Technician Plus" not just
"Technician" BUT at the same time retain your original callsign
from the first tech license?

Thanks for any info.

Mike

4039. Ten Meter Sprint

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-13 19:20:00 UTC
From: jesposit@sctcorp.COM
Message-ID: <m0qkdPK-0003VXC@sctladm.sctcorp.com>
Source record: 260295

Greetings! To all of you who regularly work on ten meters, if the propagation permits, you may hear a commotion on 28.450 MHz on Sunday evening, 25 SEP, at 2000 EDST. The Thoroughbred DX Group of Lexington, KY is sponsoring a ten meter sprint contest to introduce local hams to the world of contesting.

The sprint will last for 2 hours. TDXG members will be contacting newcomers to contesting with a desire to instill a love for same in this group which ususally restricts their operating to VHF and UHF. All of you are encouraged to contact us if you can hear us.

All participants will make an exchange of name, qth, signal report and number. The number is derived as follows: TDXG members number is the sum of states, continents, and CQ zones worked with a maximum number of 97. Non-member general class and higher will use 100 while novices and techs will use 200. As you can see, there will be a clear advantage to the latter group.

In addition to creating a beginner's contest, we want to publicize our use of 28.450 as a local calling and working frequency in central Kentucky. Look for us whenever the band is open.

The TDXG meets on the second Thursday each month at Shoney's Restaurant, New Circle Rd., NE in Lexington at 7 pm. Visitors are always welcome.

73 es gud dxing,

Joe

PLEASE don't submit a 610 for a simple change of address, like
from "9200 Second Ave." to "9200 Second Avenue."

PLEASE don't do this. Yes, your new license will say "Tech
Plus." Yes, carrying around your Tech license does not imply
you passed 5 wpm. A pain? Yes. Need to carry that CSCE...

But every application sent in to the FCC uses government
resources like paper, time, money, and manpower, which are
already in short supply in Gettysburg. I'm not saying to
definitely not send it in, but there are PLENTY of really
good reasons to send it in - like actually upgrading, or
moving, or using a P.O. Box instead of a street address,
etc., etc., etc.

Imagine if all the Tech Pluses sent in new 610's at the
same time, asking for "Tech Plus" pieces of paper...

What the FCC should AUTOMATICALLY do is send out a new
"Tech Plus" license to EVERY Tech Plus, except that there
are probably (at least) 75,000 of them in the US.

Kenwood TH79 Dual Bander Modification and Feature Guide r1.5 9/13/94
==========

Clayton Wagar, KD4IDN
920 West Crawford Street #7
Dalton, GA 30720

Here is a compiled list of modifications and features I've found for the Kenwood TH79 Dual Band HT.

Thanks to the following for their contributions to this document:
Mike Musick, N0QBF
Cole Cunningham, AA7RD
Duane Voth, KC5BGV
Chuck Scott, N8DNX

Having had many other radios in the past, and certain to have many in the future, I understand the anticipation of Amateur Radio operators to find modifications to their equipment. I started this document because I want to see _quality_ information circulated as quickly as possible, in order to save a lot of time and effort for others.

If you have any other comments, mods, or information you would like to see included in this document in the future, please send them to:
Clayton Wagar KD4IDN
yensid1@aol.com

Outstanding questions at the time this document was released:

* Rumor of a keypad modification to the radio for "Wide band" TX, RX. If you know of this mod, please write to me, even if you wish it not to be published. This would save a number of poor radios from useless torture!

Hope you find all of this information useful. Again, please send corrections or additions to yensid1@aol.com

73 de Clayton

++
I. Disclaimer
++

Well, don't you get sick of this stuff? I know, I know. However, I must say that I cannot and will not be responsible for anything that might happen to your radio, your person, your dog, or other operators you might talk to with your th79. In addition, if you decide that, with your newly modified HT, you just absolutely must cause unlawful interference with another ham or another radio service, I won't pay your NAL. Really.

Oh, and while we're at it... The extended RX/TX modifications may require you to solder or desolder really, really small components. If you want to know how small, look at the tip of an average ball point pen. Smaller than that. It takes about 1/2 of a second to wipe out several components as well as fry the board inside the 79. Please be careful.

++
II. TH79 Description and Impressions, by Mike Musick, N0QBF
++

Lulled by the sexy small size, I succumbed (or, rather, the credit card succumbed) and bought a Kenwood TH-79 dual-band H-T recently. Already owning a TH-78, the comparison comes easy.

SPECS. The TH-79A is a U.S.-spec dual-band transceiver, featuring coverage from 144-148 and 438-450 MHz. Receive coverage is extended on the 2M side from 118 to 174 MHz with AM in the aircraft band; there is no extended UHF coverage without modification. Max power is rated 5W on VHF and 3.5W on UHF with a 12V source; max power with stock 600 mAH nicad pack is 2.5/2.0. There are three power levels for each band - high, low, and extra-low (30mW). There are 80 memory channels, with no evident expansion capability. U.S./Canada version comes with the CTCSS encode/decode option. Going price at a 7/17/94 hamfest was $480.

GENERAL IMPRESSIONS. Tiny, tiny, tiny. Imagine putting a small duckie on the ARRL Repeater Directory - except that the 79 is narrower by about an inch. With the standard battery and not counting the belt clip, the dimensions are roughly 2" wide, 5" tall, and 1" thick. The belt clip adds 3/8" to the thickness; I left it off so it would be pocketable, and, frankly, it fits moderately comfortably in my work slacks' front pockets, which was surprising. It's tiny! (Oh, I said that already.)

The 79's keyboard has larger buttons than it's predecessor (lacks the cover, too) which are much easier to use. Control layout in

general is better and even in just a couple of days I appreciated the change. No more ambiguous power switch - it's in the primary band volume knob in a normal OFF/ON/VOL setup. Secondary band volume control is on the "ring" of the freq/channel encoder knob in a coaxial arrangement.

There are no squelch knobs; it a key+knob function for both bands. Squelch control was, well, interesting. There are only six "settings", with usually only the lowest setting opening the squelch under no signal. Reading between the lines in the manual, apparently the squelch circuit is semi-automatic. I expected some limitations, but had no complaints under actual use - it worked well.

With my expected habit of putting it in my pocket, I like the control lock switch - it's *not* an F-key function, but, rather is a slide switch next to the PTT. No more fumbling around to unlock it. Unfortunately, the lock function does not lock PTT - that has to be disabled with the "Tx Stop" menu setting. I found this out the hard way by putting it in my pocket and inadvertently keying-up a repeater.

The 79 has an alphanumeric display capability of two lines of 10 characters, which is used in several ways. First, there is a "guide" facility, which provides online instruction for most operation features with a scrolling display. Then there is a "menu" function, which provides access to the settings which were normally done with obscure F-key commands in the 78. Setting the various functions is very clear this way. There is also a status review mode, where the more important settings are displayed.

Finally, the alphanumeric display can be set for each programmed channel. Seven characters positions are available, and almost the entire extended ANSI character set - that's right: lower case, symbols, and accented characters - can be used. However, alpha display is mutually exclusive with frequency display. Frequency display mode can be selected in case you forgot what was "underneath" your programmed channel ID.

++
III. MARS/CAP Modification provided by Mike Musick, N0QBF
++

Here is the MARS/CAP modification for the new Kenwood TH-79A dual-band HT. Usual disclaimers about doing mods apply.

1. Remove battery.

2. Open case by first removing 3 screws (#00 Phillips) on back and 1 screw on side hidden underneath the rubber flap covering the DC power jack. Gently pry apart starting at top; BNC connector will move with back, knobs with front.

3. Spread unit out. Wires will "hinge" on the side with the PTT
button.

4. Looking on the back of the keypad (front) half, locate green
wire on upper left, just below the CTCSS decoder module.

5. Neatly cut this green wire, and tuck back in so ends won't
touch each other or other components.

6. Reassemble.

Programmed memory will be lost since the CPU will notice the
strap change and reset itself.

End result -

Before: VHF RX - 118.000-173.995 TX - 144.000-147.995
UHF RX - 438.000-449.995 TX - 438.000-449.995

After: VHF RX - 118.000-173.995 TX - 142.000-151.995
UHF RX - 420.000-449.995 TX - 420.000-449.995

Automatic repeater offset and shift selections remain normal.

And this tip comes from Duane Voth, KC5BGV...

"The MARS/CAP mod can be made without opening the entire case up. You
can fairly easily cut the green wire by simply (and carefully) removing
the CTCSS decoder cover and using a small pair of diagonal wire cutters."

++
IV. "Wide Band" Modification, provided by Cole Cunningham, AA7RD
++

Following is a modification for the Kenwood TH-79A Dual Band HT which
opens it up to tuning from 67-174 MHz and 400-511 MHz. Actual receive was
85-135.995 AM and 136-179.995 FM with reasonable (0.5 microvolt
or better) sensitivity at all the points I measured. Transmit was
136-179.995 and 400-511 with power dropping off at the ends but still
usable (about 0.5w on the high scale at the band edges).

As usual, I take no responsibility for the mods, or your use of the unit
after mod. Please exercise good judgement and don't endanger our ham bands
with your irresponsible actions.

The observations noted are all I tried and I have no further data.
This is such a delicate operation that one shot was all I wanted to do,
and when it worked I quit!!!

WARNING-CAUTION-LOOKOUT-ETC!!!
The diodes to be moved are microscopic!! About 1mm long by 0.5mm wide.
This mod should be done by professionals on a closed track only.
Children, do not attempt this at home. Requires extremely small soldering
tools and MUCH skill. I had a professional surface mount facility do mine...

1. Open the unit by removing three screws from the back and one under the DC power input cover. Carefully separate the front and back pieces. The two case halves may be disconnected by pulling the wired plug and by prying the brown latch on the ribbon cable connector up enough to release it.

2. On the front PC board in the lower right corner as viewed from the rear with the knobs pointing up there are seven spots for diodes in a row, with one diode missing.

```
|
o o o o x o o |
_______________|
2 3 4 5 6 7 8
```

The numbers are D302-D308, left to right, with D306 missing.

3. Remove D304, and D307. Put them away in a safe place (Just in case...)_

4. You should now have:

```
|
o o x o x x o |
_______________|
2 3 4 5 6 7 8
```

5. Reassemble and good Luck.

Enjoy, but don't create problems with the new capability...Wouldn't it be nice if Kenwood would make a RX only mod with these capabilities and we wouldn't have to worry about accidental transmissions where we shouldn't be transmitting. I, for one, don't want or need to TX, just RX...

73, Cole, AA7RD
August 11, 1994

(Note - This mod also adds 2 more menu settings. One of which is an AM/FM demod selector for the 300-400 Mhz band. To access this band, select the VHF band, press F, then press the Low/Hi key. Repeat to return to 144 Mhz. The AM/FM selector will allow you to listen to Military transmissions in the 300Mhz band in either AM or FM.
- Clayton)

++
V. Remote Base Operation with Kenwood 732/733
++

Kenwood has now simplified remote base operation of their mobile rigs with the TH79.

I will not give a step by step on how to control the mobile rigs, since they are different. Hoewever, to really understand this feature, I would first get to know the remote control feature on the mobile very well. This makes the following explanation a little clearer!

To access this feature, hold [PTT] and [MR] while [POWER ON].

The display will indicate -RC-, which I presume means 'Remote Control'.

If you have correctly matched your DTSS codes, frequencies, etc, the
dual bander's keypad now becomes a function pad. Pressing certain keys
enables or disables functions on the mobile rig by sending the DTMF
sequences for you.

Please note that all this fuction does is send the DTMF tones over the air
to control your mobile rig. I have not made a list of what each key does,
but as the 79 sends the DTMF tones, the display will indicate the function.
(i.e. - RPT ON, RPT OFF, TONE ON, TONE OFF, etc.)

73 de Clayton
KD4IDN

And this from Chuck Scott, N8DNX...

"The "RC" function is configured to directly control radios such as
the TM-732. In fact, if you look at the layout of the microphone remote
commands for the 732 it very closely matches the key assignments for of
the "RC" mode. Since I have a TM-732 installed in my car, I had a chance
to try this out and it's VERY convenient. Everything from direct frequency
entry with the "F" key to enabling X-Band repeat. I'm really surprised
they aren't marketing this feature of the radio."

++
VI. Post Modification Spec Sheet, by Clayton Wagar, KD4IDN
++

Here is a small chart showing the measured specifictions of TH79
S/N 60300272 after modification. The measurements were made with an
IFR 1200S Service Monitor, on the bench, with a 6V power supply.
Your milage may vary - these are just what happened with mine, and
I would suspect that most units are pretty similar.

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
VII. Cross Band Repeat, from Chuck Scott, N8DNX
++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++

The TH-79 does go into X-Band repeat. Press the "F" key then the "MONI"
key to enter repeat mode. Use the same to return to normal. There is a
10 min transmit limit so it's not useable for long duration monitoring of
a continuous transmission. That's understandable in light of the number
of horror stories I've heard of people frying their HT's in repeat mode.

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
VIII. Other Observations, Ramblings, Etc.
++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++

From Chuck Scott, N8DNX....
```

"Regarding the lack of a memory Lock Out function, I talked at length with the Kenwood people. They have been inundated calls about this and have told me that they are preasuring Japan to come up with a processor replacement to fix this, perhaps as a retrofit. I encourage any owner of a TH-79 to write to Kenwood insisting on such a modification at no cost and asking that they be informed when it is available. I think this is justified for several reasons. First, I have been told by another ham that the official brochure indicates that such a feature is included. Second, and more important, it is arguable that the radio is not suited to the application without memory lockout. After all, it's an 80 channel radio. To make effective use of that many channels REQUIRES a channel lockout function. Without effective use of that many channels, the radio is not comparable to the current standard for such a unit.

BTW, close inspection of the RF deck in my radio shows no obvious missing parts. I didn't remove the board to check the other side, but my suspicion is that the 800 MHz parts are installed. I'd be interested in input from others on that. So far I've not discovered how to make it display any 800 MHz frequencies though."

Actually, the MRF 237 is similar and sort of common (pair of them used
in Heathkit HW-9s). It might work (if it doesn't oscillate)

RF Parts 1-800-737-2787 has them in their catalog.

Source record: 260293

Well, I am going to be a centrist in this discussion. I have been using SM AND listening to my radio. I found them both to be good in different ways. SM was very good in getting my numbers up to speed. For the first time I can hear an unexpected sequence of numbers and copy them without engaging additional brain cells. Also, I am finding word practice helpful. The common word groups became second nature much more quickly than if I had been using the radio alone(don't ask me how I know that, I just do).

On the other hand, the radio is far more interesting, fun and the varied reception makes it more useful. I compare to the two methods to learning a musical instrument. You can be fairly proficient by playing musical pieces, but if you really want to be good, drills are important to strengthen up your weak spots. SM is a great drill program.

I don't believe there are any wide-area newsgroups specifically catering to the interesting bands, however, there is a mailing list dedicated to the theme. It is hosted by the Stanford University amateur radio club and you may subscribe to it by sending a subscription request to listserv@w6yx.stanford.edu. The mailing list name is, aptly enough, vhf.

Try using the following as the body of a mail message addressed to listserv@w6yx.stanford.edu

4052. Crossband repeat volume on TM-733A?

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-14 00:11:33 UTC
From: adair@atldg02.dbsoftware.com
Message-ID: <1994Sep14.001133.24652@dbsoftware.com>
Source record: 260312

Has anyone noticed the crossband repeat volume on a TM-733 to be low? I've looked at the schematic, and there isn't a pot to adjust this, but a 10K resistor feeds the audio which might be the one to change if I can get to it...

Anyone looked at this?

Just whistle! No I'm not kidding. Slowly raise the pitch as you're whistling
until you hit 1750 Hz. After a while you'll learn to whistle the right pitch
right off the bat. This can also activate modems too (not useful though).

>>dale.piedfort@pcappbbs.com

Filling the cable with something as Jim suggests will change the impedance of that section of the cable with bad things resulting. Splicing on a piece of RG-8 is an acceptable solution. This is done all the time with hardline.

4059. SAREX Update 9/14 at 2:30 UTC

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-14 03:18:22 UTC
From: ABFHB@abacus.gsfc.nasa.GOV
Message-ID: <940913231822.4aa@abacus.gsfc.nasa.gov>
Source record: 260134

SB SAREX @ AMSAT $STS-64.015
SAREX Update 9/14 at 2:30 UTC

Silver Spring, MD, September 14 1994 at 2:30 UTC

SAREX Contact on Satcom C1 Satellite Downlink

Those who wish to see a SAREX school group contact in action and have
access to a C-band TVRO dish will have a special treat later today.
The Step/STAR Schools Young Astronaut group, located in Spokane, Washington,
will talk to the space shuttle astronauts through a special telebridge link
which is expected to begin at appoximately 18:10 UTC. This contact will be
broadcast live via the Satcom C1 satellite on transponder 18. C1 is also
designated F1 and is located at 137 degrees West Longitude.

School Group Status

8 of the 10 planned school group contacts have now been successfully completed.
The Springfield Plains Elementary, in Clarkston, Michigan had an outstanding
9 minute contact with mission specialist Jerry Linenger, KB5HBR. 26 questions
were asked by the students during this event. Reports from the coordinators
at all the schools have been thankful of the outstanding educational program
that SAREX provides the students. At the Crystal Lake South Elementary school
in Illinois, the students got an "elementary" demonstration of circular
polarization. The technical team at the school demonstrated to the students
that left hand polarization of their antenna provided up to a 4 S unit
improvement in the signal over right hand circular polarization for some
portions of the pass over the Chicago area. Chalk up another one for SAREX
volunteer ingenuity!

General Voice and Packet QSOs

We have gotten several reports from radio amateurs and the shuttle crew that
general voice QSOs are being made. Please remember that the astronauts
are not awake around the clock. Their 8 hour sleep period ends at 11:22 UTC
on 9/14, at 9:52 UTC on 9/15, at 10:22 on 9/16 & 9/17 and at 9:52 UTC on 9/18.
Also, as I reported at the beginning of this flight, Shuttle power
conservation measures, required to support an extra (10th) day of flight, has
resulted in no packet radio operation to date. It is hoped that the packet
system will be turned on later in the flight. The SAREX team will keep you
posted. Please remember to listen on the downlink frequency (145.55 MHz) for
the packet activity BEFORE sending packet connects to the Space Shuttle.

Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group

> 1. Move to a different frequency.

Why can't the repeater move?

> 2. Use directional antennas to reduce or eliminate the interference.

Propably won't work. But why should these folks spend the money on
directional antennas when they're not the cause of the problems?

> 3. Have your QSOs when the repeater is not so active.

Or maybe the repeater should shut down when the simplex channel
is active.

>>This repeater uses 146.535 as an input. Both 147.555 and 146.535 are listed
>>as FM simplex frequencies in the ARRL band plan.

> I have heard that for many years there have been no available
> frequency pairs for repeaters on 2 meters in Southern California.
> Therefore, if more repeaters are to be put on the air, some
> underutilized simplex frequencies could be used. Since no one has
> a "right" to a particular frequency, any interference problems that
> arise would have to be dealt with among the affected parties.

Alan - have you ever heard of 1 1/4 meters or the 440 Mc band? Why
should the 2M repeaters encroch upon the valuable simplex freqs?
Are these new 2M repeaters offering coverage that no other repeater
provides? Or are they just duplicating coverage that was duplicated
by several existing repeaters?

I suppose you'd think it would be fine to place a repeater in the
satellite subbands since they're `underutilzed' (how many hours per
day are they in use?)

>>This repeater's ID'er uses the callsign of W6FP.

>>Getting tired of the interference, I got on this repeater, and nicely
>>complained to one of it's control operators. He was fairly courteous;
>>he invited me to use the repeater, and apologized for the interference,
>>but did not offer to resolve the problem.

> Why should he have?

What an awful attitude! Rather than a terse four word response
why not give us your opinion why the owner shouldn't help resolve
a problem that he caused?

>>I informed the control operator that both 146.535 and 147.555 were intended
>>for FM simplex, under the ARRL band plan. He stated that several local ARRL
>>Official Observers had approved the non-standard repeater frequencies.
>>
>>Do the "suggested" Band Plans have any meaning any more?! What next: FM
>>packet nodes on 144.200 or CW QSOs on repeater inputs?

> As our bands become more populated,

Which bands, Alan? There's a *huge* amount of spectrum in the UHF
bands just waiting for operators to move off the crowded 2M band.

>flexibility and understanding will
> become watchwords for dealing with the inevitable interference problems.

If one is not part of the solution then one is the cause. Is this repeater
owner a solution to interference or a cause?

> The ARRL band plans are nothing more than suggestions for utilizing our
> available spectrum. The FCC dictates what modes can be used on a
> particular band of frequencies - after that, it is up to us to use the
> spectrum in efficient ways. In some parts of the country, the ARRL band
> plan may work well, but in other parts of the country, perhaps not.

I imagine your not the type to seal a business deal with a handshake.

>>Yes, all of the conventional 2 meter repeater pairs in Southern California
>>are all used up, and repeater-to-repeater interference is common. But does
>>every Ham have a right to have his own repeater? With our crowded,
>>limited VHF spectrum, I believe we all should use FM simplex or SSB
>>whenever possible.

> The reality is that many, if not most people that are active on 2 meters
> are using hand-held transceivers with small antennas. Except for close
> proximity situations, simplex operation is just not as effective or
> practical as communicating through a repeater system.

And those handhelds at home can use external antennas and communicate
quite well via simplex.

>>Any comments or suggestions?

Certainly no suggestions from Alan so far.

>>While your area may not currently have such
>>problems, it may soon happen, due to the tremendous popularity of the
>>No-Code license.

> Think about using another frequency for your local ragchew group.
> There must be plenty of space available on a band that is 4 MHz wide.

Only until the entire 4 Mc is filled with repeaters duplicating coverage
of existing repeaters 10-fold.

This comming Sunday.....

Now TWICE the number of outdoor Tailgate spaces are available...

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS

FLEA all SUMMER at MIT
September 18th, 1994
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

Bill:

Eat peanut butter and go for it. You have already listed all the right reasons to do so. I bought my ICW21AT 5 months ago, and I use 70cm a lot here in the Seattle area. Had I gone with only 2 meter, I'd be looking at dual banders and figuring a way to get one today.

: sometime in October. Any Ideas?

: Thanks!

: Russ Starksen - N0MRR
: Cray Research Inc.
: rps@cray.com

I got interrupted during the long reply, so here's the short reply, from the Boy Scouts of America literature:

"JOTA (Jamboree on the Air) is from Saturday, October 15, 1994 at 0001 hours local time, to Sunday, October 16, 1994, at 2359 hours local time, though some activity flops over from Friday to Monday to take advantage of long distance (DX) time differences..."

JOTA Scout Frequencies:

BAND	SSB (phone)	CW (Morse code)
80M	3.740* and 3.940 MHz	3.590 MHz
40M	7.090* and 7.290 MHz	7.030 MHz
20M	14.290 MHz	14.070 MHz
17M	18.140 MHz	18.080 MHz
15M	12.360 MHz	21.140 MHz
12M	24.960 MHz	24.910 MHz
10M	28.990 and 28.350** MHz	28.190 MHz

*Not authorized to transmit in the United States (Region 2); however, you may listen

**For United States, to allow novices to participate in JOTA on the phone.

"Postcard size certificates are free and are available to anyone participating in any way. They may be ordered beforehand for presentation during JOTA, or they may be awarded at scouting or amateur radio club meetings later. Send requests to Jamboree-on-the-Air Certificate Cards, S221, 1325 West Walnut Hill Lane, P.O. Box 152079, Irving, TX 75015-2079, with a self-addressed and STAMPED envelope large enough to hold the cards ordered. All orders must be received by December 31..."

Get further info from your local Boy Scout regional office (look under
Boy Scouts of America in the phone book) and ask for the JOTA fact sheet.

Thanks for your interest.

Correction: Hope that the full text follows this time.

The Western Connecticut Hamfest, sponsored by the Candlewood Amateur Radio Association will be held this coming weekend. Plan to attend!

When: Sunday, 18 SEP 94, 0800-1300 EDT, rain or shine (but hope for shine :-)

Where: Edmond Town Hall, Newtown, CT. (near the Flagpole)
Directions: I-84 to exit 10, take US Route 6 South to the Flagpole (State Route 25), and you should see us on the right.

Talk-in: Danbury repeater 147.12 +600, PL 141.3

Admission: $4.00, kids under 12 free.

ARRL sanctioned. Handicapped access. Door prizes. Refreshments. Ample parking.

Hope to see you there.
73 DE N1QNK
Jim

I fixed the Sten. I got it with a 10" barrel and a 10" barrel. I heard about a gun expert. He's done quite a few autoconversions already.

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
---

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th and 21st of each month. This article is posted on the 14th and 28th
of every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ-----------------------------------

There are 7 ways to obtain a copy of the FAQ.
1) World-Wide Web (WWW) and Mosaic
2) NetNews
3) Anonymous FTP
4) An Electronic Mail Server
5) Mail List Subscription
6) Gopher
7) Wide Area Information Server (WAIS)

Option #1: World-Wide Web (WWW) and Mosaic

The World-Wide Web (WWW) has experienced explosive growth in usage in 1993

and 1994. WWW clients like Lynx (in ASCII text) or Mosaic (X/Mac/Windows) can display the FAQ from many different sources. Each source is named by a URL (uniform resource locator.) If you are one of the growing numbers of people with Internet access, Option #1 is your choice. The following URL can be used to find the FAQ:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html

Other services listed later in this article are also accessible with WWW at the following URLs:
news:rec.radio.info
file://ftp.amdahl.com/pub/radio/amateur
file://ftp.cs.buffalo.edu/pub/ham-radio
file://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq
file://grivel.une.edu.au/pub/ham-radio/buffalo/ham-radio
file://nic.funet.fi/pub/ham/info
gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/
wais://rtfm.mit.edu/usenet

For more information on WWW, see the comp.infosystems.www newsgroup. Also, the help options on your WWW client should be able to point you to lots of information all over the world.

Option #2: NetNews

If you are familiar enough with NetNews to look through previous articles on your system, Option #2 above may be the easiest for you. The FAQ is posted so that it should not expire from your site's news spool until the next one is posted. Unfortunately, some news administrators do not honor the expiration dates meant to preserve the FAQ.

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers. If the FAQ has expired at your site, try Option #3 (and ask your news administrator to honor expiration dates for articles cross-posted to news.answers if he/she can.)

Option #3: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites which are directly connected to the Internet. If you don't know how to use FTP and can't find a friend to help you, continue to Option #4. If your site is not connected to the Internet, you should also continue to Option #4.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------ --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily

ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #4: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Option #5: Mail List Subscription

If you prefer, you may get the FAQ and other periodic Ham Radio information
as it gets posted. All the information posted to rec.radio.info can be
obtained through the UCSD list server via the "radio-info" mail list. To
subscribe, send an e-mail to
listserv@ucsd.edu
Similar to the e-mail server listed above, just send a single-line message
subscribe radio-info
If you need more information, the listserv program also accepts a "help"
command. Just keep it on a separate line in the message.

Option #6: Gopher

You can access gopher servers on TCP port 70 (gopher protocol) at the
following locations which carry the Ham Radio FAQ:
cc1.kuleuven.ac.be

jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl
For more information on gopher, see the comp.infosystems.gopher newsgroup.

Option #7: Wide Area Information Server (WAIS)

In addition to the other services mentioned above, rtfm.mit.edu offers a
WAIS server on TCP port 210. Use the "usenet" database to access the FAQ.

For more information on WAIS, see the comp.infosystems.wais newsgroup.

Table of Contents

Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio

** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Asking Questions--

If you have questions about Amateur Radio (a.k.a. Ham Radio), please read the FAQ. If your question is not answered there, check if you have any other sources (i.e. Mosaic/WWW) before proceeding. If you still don't have an answer, post your question to the most appropriate rec.radio.amateur.* newsgroup. And be sure to mention where you have already looked for the answer so people won't mistakenly tell you to try them again.

Thank you for doing your part to conserve network bandwidth!

--Submitting changes for the FAQ----------

If you have comments or updates for the FAQ, send e-mail to
hamradio-faq@amdahl.com
This will send mail to all the people on the FAQ editorial review group.

--Call for FAQ Editors----------

As with any volunteer effort, new volunteers are often needed. We need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

As you have to deal with some FAA regulatory issues for such an
installation, I strongly suggest you ask this question on one of the
aviation newsgroups as well. According to how I read the regs, you can't
just install an amateur transceiver and antenna in your own airplane
without having things checked out by the appropriate chap (certified A&P
mechanic?).

Consider using an HT. You don't have to install it, so you don't have any
of these problems, and a watt works _extremely_ well from a few thousand
feet. It seems to be what the local guys use when they're airborne.

Wouldn't it be sacrilege to try and duplicate the original, hallowed
device?

Yes--you can use 145.25 from about Trenton right down I-95 to about the
Philadelphia International Airport, and start using 146.73 around
center-city Philadelphia, so there's some overlap. 146.73 is good well
into Maryland, almost to the Susquehanna River.

Actually, both of those machines provide some coverage of the New Jersey
Turnpike, although something like the Tabernacle repeater (don't recall the
frequency) is more solid if you're running a HT.

You'll get a lot of different answers on this one. What I found when I was doing my research is that the JPS unit has the edge on QRN while the Timewave unit wins hands down in most other respects, i.e. filtering, heterodyne zapping, and fidelity of the processed signal.

I love my DSP 59....

73

Herb Rosenberg (herbr@netcom.com) wrote:

If you or a friend are interested in ham radio and would like to get started in this fascinating activity, the Raleigh Amateur Radio Society is ready to help you! RARS sponsors amateur radio license classes twice a year and registration for the fall session has begun. Classes start Tuesday, October 4th and continue through November 10th. Classes meet each Tuesday and Thursday from 7 - 9:30 pm at the Westover Methodist Church, 300 Powell St. in Raleigh. The class fee is $15. If you wish to buy the text, "Now Your Talking", at the class, the cost is $15 (this text is also available at Radio Shack). Code practice tapes (optional) are $5. If you would like to register or have further questions, please call Lynn Pitegoff, KO4QH at 787-1111 or Bob Rinn, N4VQN at 847-6185.

Oscar 13 still seems to be on the "pre-Sept. 12" transponder schedule, with mode S from MA 120-150, and Mode B afterwards.

Signals are very strong, indicating that maybe the attitude hasn't changed.

Has the schedule change and/or attitude change been postponed?

[[EXAMS9.14 : 2841 in EXAMS9.14]]

ARRL Fall National Exam Day - October 29, 1994

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
upwards of 12 weeks to process licenses (although as recently
as this week, some licenses have come through in six to eight weeks.
The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC. For further information, please contact the test session
CONTACT PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

4084. Macedonia QSL

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-14 15:07:00 UTC
From: forrest.gehrke@cencore.com
Message-ID: <6e.3918.332.0N6669F9@cencore.com>
Source record: 260130

QSL Information, please. Awhile back I worked a Macedonia station, call sign Z30B. Gave his QSL info via YU5CEF.

Never received a response and it's been a year ago.

Anyone have any info of ever receiving a QSL from this fellow? If so, what is his mailing address?

4085. Digital Recording with SoundBlaster

Newsgroup: rec.radio.amateur.misc
Date: 1994-09-14 15:17:25 UTC
From: jnavary@nyx10.cs.du.edu

Lately I noticed an ad in the radio hobby magazines for a digital "endless loop" recorder that provides 10 or 15 seconds of recording time which are available for replay at the touch of a button. This would be extremely handy for analyzing station identification, etc when conditions are not the best.

It seems to me that the same type of functionality should be fairly easily obtained through software developed for the SoundBlaster or other sound cards. Unfortunately, I am NOT a programmer and wouldn't know where to begin.

Is anyone aware of any software currently available which coule be put to this use?

If none is currently available, any of you programming wizards care to tackle this one?

73,

Jim Navary

NOTE: The Effective Sunspot Number for 12 SEP 94 was 28.6.
The Full Kp Indices for 12 SEP 94 are: 2- 1+ 2+ 4- 3- 3o 2+ 2-
The 3-Hr Ap Indices for 12 SEP 94 are: 7 5 10 23 14 15 10 6
Greater than 2 MeV Electron Fluence for 13 SEP is: 7.5E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. The only activity of note was
a long duration, class B5 x-ray burst at 13/1419UT. No new
regions were numbered.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet to active levels for
the past 24 hours. Energetic electron (GT 2 MeV) flux was high.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to active for the next 48 hours. High
latitude stations may observe periods of minor to major
storming for the next two days. Activity is expected as a result
of a CME induced shock wave expected within 24 hours and a
small, favorably postioned coronal hole.

Event probabilities 14 sep-16 sep

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 14 sep-16 sep

A. Middle Latitudes
Active 35/30/30
Minor Storm 20/15/10
Major-Severe Storm 10/10/05

B. High Latitudes
Active 35/35/30
Minor Storm 15/15/10
Major-Severe Storm 20/15/05

HF propagation conditions were near-normal over all
regions today. High and polar latitude paths may see periods
of minor signal degradation increase in frequency over the next
24 to 48 hours if the disturbance noted above arrives. If it
fails to arrive, near-normal propagation should persist with
less frequent periods of minor signal degradation affecting the
local night sectors.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.
